M756A2; TRUCK, MAINTENANCE,
EARTH BORING AND POLESETTING: M764

NOTE:

THE STYLE OF THIS TM IS
EXPERIMENTAL. IT IS BEING TRIED
BY THE ARMY ONLY ON
A LIMITED BASIS

WARNING

EXHAUST GASES CAN BE DEADLY

Exposure to exhaust gases produces symptoms of headache, dizziness, loss of muscular control, apparent drowsiness, and coma. Permanent brain damage or death can result from severe exposure.

Carbon monoxide occurs in the exhaust fumes of fuel burning heaters and internal combustion engines, and becomes dangerously concentrated under conditions of inadequate ventilation. The following precautions must be observed to insure the safety of personnel whenever fuel burning heater(s) or engine of any vehicle is operated for maintenance purposes or tactical use.

Do not operate heater or engine of vehicle in an enclosed area unless it is adequately ventilated.

Do not idle engine for long periods without maintaining adequate ventilation in personnel compartments.

Do not drive any vehicle with inspection plates or cover plates removed unless necessary for maintenance purposes.

Be alert at all times during vehicle operation for exhaust odors and exposure symptoms. If either are present, immediately ventilate personnel compartments. If symptoms persist, remove affected personnel from vehicle and treat as follows: expose to fresh air; keep warm; do not permit physical exercise; if necessary, administer artificial respiration.

If exposed, seek prompt medical attention for possible delayed onset of acute lung congestion. Administer oxygen if available.

The best defense against exhaust gas poisoning is adequate ventilation.

WARNING

Serious or fatal injury to personnel may result if the following instructions are not complied with.

Diesel fuel is very flammable. Care must be used when choosing a place to work on fuel system. Keep truck about 50 feet away from an area where open flame, sparks, or smoking may cause a fire. Keep a fire extinguisher close by.

Fuel coming out of an injector nozzle under pressure can go through the skin. This can cause blood poisoning. Keep hands away from injector nozzle when doing test procedures.

Only properly trained personnel should perform test on 115 volt system. The voltage present in 115 volt system can cause severe or fatal electric shock.

INDEX		Index 1

CHAPTER 1

GENERAL INFORMATION

1-1. SCOPE. This volume shows you how to do troubleshooting at the direct and general support levels of maintenance. The amount of troubleshooting you can do is based on what the Maintenance Allocation Chart says you can fix. Because of this, the only trouble symptoms you will find here are those that could be caused by faulty things you can fix.

1-2. ORGANIZATION. This volume has the information you will need to troubleshoot the truck. Chapter 2 tells you how to use the information in the other chapters of this volume to find what is wrong with the truck, and what you must do to fix it. Chapter 7 has a procedure that takes you step-by-step through a sample troubleshooting procedure and shows you how to use the information to find the trouble and fix it.

1-3. TROUBLESHOOTING APPROACH. In order to find out what is causing the problem in the truck, you must use a good approach. A good approach just means a way of doing troubleshooting so you can find the problem and not get confused or lost. The following chapter describes how you can use the materials in this volume to troubleshoot with a good approach.

CHAPTER 2

TROUBLESHOOTING APPROACH

2-1. GENERAL APPROACH. This chapter gives you instructions on how to use the troubleshooting material to help you find and fix the trouble. In every system of the truck there can be faults or problems which will cause certain symptoms. Symptoms can be such things as unusual noise, vibration, or even complete failure of a system. This volume gives information for each system on which you can do troubleshooting to find faults and fix them. Before you troubleshoot a system, you should look at the troubleshooting indexes which will lead you to the information you need to help make your troubleshooting faster and easier. If you follow the instructions the right way, you will find those troubles you can fix. But, if you fix something and the trouble is still there, it means there is more than one trouble. If this happens, start all over again to find the other trouble.

2-2. TROUBLESHOOTING INDEX. The troubleshooting index, and instructions how to use it are in chapter 3. Go to this index first because it tells you where to find troubleshooting roadmaps, fault symptom indexes, summary troubleshooting charts and support diagrams for each system.

2-3. TEST EQUIPMENT PROCEDURES INDEX. The test equipment procedures index, and instructions on how to use it are in chapter 4. This index tells you where to find electrical and mechanical tests which you can use to do your troubleshooting. It also tells you what equipment you will need to do the tests. If you have a STE/ICE (Simplified Test Equipment/Internal Combustion Engine) Set (NSN 4910-00-124-2554), you may use it, where applicable, to do your troubleshooting. Refer to TM 9-4910-571-12&P.

2-4. TROUBLESHOOTING ROADMAPS. Troubleshooting roadmaps for each system are in chapter 5. If the system is made up of subsystems, these subsystems are also on the roadmap. Under the subsystem is a list of things which are the most likely causes of a fault symptom in that subsystem. If you have enough skill, you can troubleshoot these things on the truck without using the detailed troubleshooting procedures. So if you know enough about the truck to work on your own, use the roadmap for the system with the problem before you check the fault symptom index.

2-5. FAULT SYMPTOM INDEX. Fault symptom indexes and instructions on how to use them are in chapter 6. For each system of the truck, there is an index which gives you a list of the fault symptoms for that system. The index also tells you where to find the detailed troubleshooting procedures and what resources (tools/people) you need to do each procedure.

2-6. SAMPLE TROUBLESHOOTING PROCEDURE. A sample troubleshooting procedure is in chapter 7. This sample procedure will help you see the way detailed troubleshooting procedures are to be used.

CHAPTER 3

TROUBLESHOOTING INDEX

3-1. GENERAL. This chapter has a troubleshooting index which covers every system of the truck on which you can do troubleshooting. The index tells you where to find all the other information you need to do your troubleshooting procedures.

3-2. INDEX. The troubleshooting index. (figure 3-1) is divided into five columns that list systems, troubleshooting roadmaps, fault symptoms, summary troubleshooting procedures, and system support diagrams. The following breakdown tells you what is in each column.

a. System Column. This column gives a list of systems on the truck for which troubleshooting can be done at the direct support maintenance level.

b. Troubleshooting Roadmaps Column. This column tells you where to find the troubleshooting roadmap for each listed system. These roadmaps are given in chapter 5.

c. Fault Symptom Index Column. This column tells you where to find the troubleshooting fault symptom index for each listed system. Fault symptom indexes are given in chapter 6.

d. Summary troubleshooting Procedures Column. This column tells you where to find the summary troubleshooting procedure for each listed system. Some systems do not have summary trouble shooting procedures, so the column will be left blank for those systems.

e. System Support Diagrams Column. This column tells you where to find support diagrams for each listed system. Some systems do not have support diagrams, so the column will be left blank for those systems.

	SYSTEM	TROUBLE-SHOOTING ROADMAPS	FAULT SYMPTOM INDEXES	SUMMARY TROUBLE-SHOOTING PROCEDURES	SYSTEM SUPPORT DIAGRAMS
1	ENGINE	Figure 5-1	Table 6-1		Figure 9-1
2	FUEL	Figure 5-2	Table 6-2		Figure 11-1
3	ELECTRICAL	Figure 5-3	Table 6-3

9	M756A2 REAR WINCH	Figure 5-9	Table 6-9		

TA 120721

Figure 3-1. Troubleshooting Index

CHAPTER 4

TEST EQUIPMENT PROCEDURES INDEX

4-1. GENERAL. This chapter has a test equipment procedures index which tells you where to find the tests you need to do your troubleshooting.

4-2. INDEX. The test equipment procedures index is divided into three columns that list test equipment, tests, and figure numbers. The following breakdown tells you what is in each column.

a. Test Equipment Column. This column tells you what kind of equipment you need to do your troubleshooting tests.

b. Tests Column. This column tells you what tests are given in this manual. Next to each piece of test equipment are listed the tests that you can do with that equipment. This column also gives troubleshooting tests which can be done without using test equipment.

c. Figure Column. This column tells you where you can find the tests in this manual.

TEST EQUIPMENT		TESTS	FIGURE

CHAPTER 5

TROUBLESHOOTING ROADMAPS

5-1. GENERAL. This chapter gives troubleshooting roadmaps for every system of the truck for which you have detailed troubleshooting procedures. Figures 5-1 through 5-9 cover all the roadmaps for the detailed procedures.

5-2. ROADMAPS. Each roadmap gives a list of things which are most likely to cause a fault symptom in a system or sub-system. At least one of the items listed will be found to be bad when you do the detailed troubleshooting procedures for that system.

CHAPTER 6

FAULT SYMPTOM INDEXES

6-1. GENERAL. This chapter gives troubleshooting fault symptom indexes for every system of the truck for which you have detailed troubleshooting procedures. These indexes are in table form (tables 6-1 through 6- 9) which gives you a quick way to check what material you have to use to do your troubleshooting.

6-2. INDEXES. Each index is divided into columns which give you information you need to help you do troubleshooting procedures. The following breakdown tells you what is in each column.

- a. Subsystem Column. If the main system is divided into subsystems, the subsystems will be listed in this column.
- b. Symptom Column. This column lists the symptoms, or problems for which detailed troubleshooting procedures are given.
- c. Summary Column. This column tells you where to find the summary troubleshooting procedures for each symptom.
- d. Detailed Column. This column tells you where to find the detailed troubleshooting procedure for each symptom.
- e. Persons Column. This column tells you how many people are needed to do the troubleshooting procedure.
- f. Special Tools Column. Any tools needed to do the troubleshooting procedure which are not included in your common tool kit are listed in this column.
- g. Standard Tools Column. A dot in this column means that tools found in your common tool kit are needed to do the troubleshooting procedure.
- h. Materials Column. This column tells you what materials are needed to do the troubleshooting procedure. These materials and how they will be issued will be decided by your maintenance officer.
- i. Time Column. This column tells you how much time you will need to do the detailed troubleshooting procedure. The time will be decided by your maintenance officer.

CHAPTER 7

SAMPLE TROUBLESHOOTING PROCEDURE

7-1. GENERAL. This chapter gives a sample troubleshooting procedure. The purpose of the sample procedure is to help you see how detailed troubleshooting procedures, test equipment procedures, and summary troubleshooting procedures are used to find faults in a system.

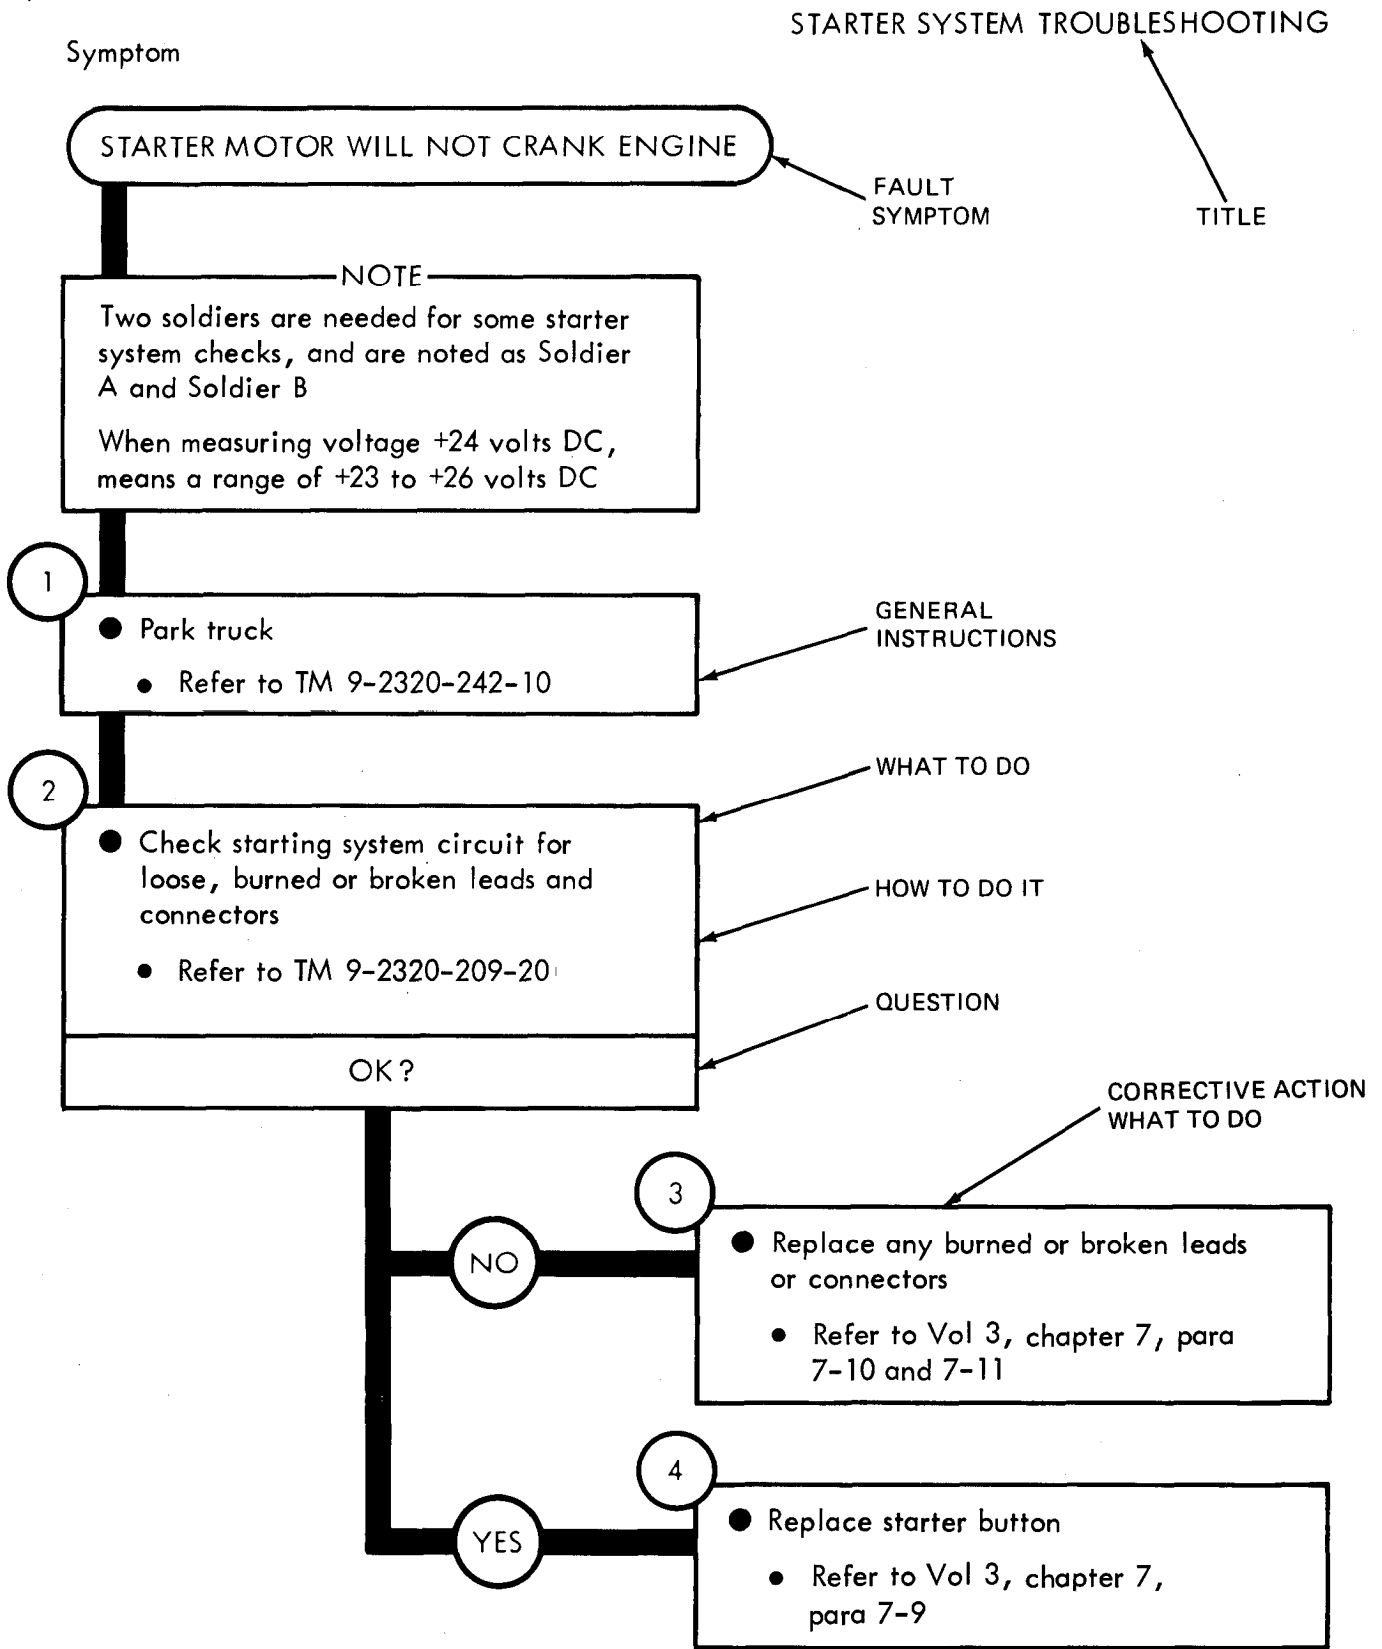

7.2. SAMPLE DETAILED PROCEDURE. (See figure 7-1.) The sample detailed procedure given is the fuel system troubleshooting procedure for the symptom, STARTER MOTOR WILL NOT CRANK ENGINE. This symptom is one you will have when you try to start your truck and certain parts on the truck are not working correctly. In each numbered box, instructions are given which tell you what to do, and how to do it. A large dot is placed next to the "what-to-do" instructions, and small dots next to the "how-to-do-it" instructions.

a. Box number ① gives general instructions on getting the truck ready before you start to troubleshoot.

b. Box number ② gives fault isolation test instructions. In this case you are told to check the starting system circuit for loose, burned, or broken leads and connections. These tests or checks, are often referred to in detailed troubleshooting procedures to help you find the problem and fix it. After you do the tests or checks you read the question at the bottom of box number ②. If the starter system is not okay, the answer to the question is NO so you go to the next box.

c. Box number ③ gives you a corrective action. In this case the fault is burned or broken leads or connectors. The corrective action is what you do to fix the fault, which is to replace any burned or broken leads or connectors. If the engine still doesn't start after you do this, it could mean that there are other faults in the system. When this happens, go back to the beginning of the procedure and do each step again until you find the other faults.

d. Sometimes the corrective actions given for a fault will tell you what to do to fix the fault, but will not give you detailed instructions on how to fix it. Instead, you will be told to refer to another volume in this manual for these instructions. Box number ④ is an example of this.

CHAPTER 9

ENGINE SYSTEM TEST PROCEDURES

9-1. GENERAL. This chapter gives test procedures for the tests given in chapter 8, for the **engine system**.

9-2. TEST SET-UP. Instructions for setup of test equipment and parts to be tested are given before the test procedures. Illustrations are used, when needed, to show you how to hook up the test equipment to the part to be tested.

9-3. TEST PROCEDURE. Detailed step-by-step instructions, in flow chart form, are given for each test. The procedure calls out the type of test and the condition of the truck system for each part of testing. The step-by-step test will lead you to the bad component or to a fault symptom within a related system. Reference is made to the fault symptom index, chapter 6, if the test shows a fault in another system.

ENGINE SYSTEM TEST PROCEDURES

ENGINE CYLINDER COMPRESSION TEST

- 1
 - Start engine and warm up to operating temperature
 - Refer to TM 9-2320-209-10
 - Turn off engine
 - Refer to TM 9-2320-209-10

- 2
 - Take out all 6 fuel injector nozzle and holder assemblies
 - Refer to Vol 2, chapter 4, para 4-3

- 3
 - Put compression gage onto number one fuel injector opening in cylinder head
 - Using new fuel injector nozzle to head gasket, put on adapter
 - Put compression gage onto adapter

- 4
 - Crank engine for 5 seconds
 - Refer to TM 9-2320-209-10
 - Note: Keep fuel shutoff in off position
 - Read compression from gage and write down reading

CHAPTER 10

FUEL SYSTEM TROUBLESHOOTING

10-1. EQUIPMENT ITEMS COVERED. This chapter gives equipment troubleshooting procedures for the fuel system, for which there are authorized corrective maintenance tasks at the direct support and general support maintenance level.

10-2. EQUIPMENT ITEMS NOT COVERED. All equipment items for which corrective maintenance is authorized at the direct support and general support maintenance level are covered in this chapter.

Symptom

1 ENGINE RUNS ROUGH AND LACKS POWER

- 1
- Park truck
 - Refer to TM 9-2320-209-10

WARNING

Diesel fuel is very flammable. Care must be used when choosing a place to work on fuel system. Keep truck about 50 feet away from an area where open flame, sparks, or smoking can cause a fire. Keep a fire extinguisher close by

- 2
- Check fuel injector nozzles
 - Refer to test equipment procedures index for fuel injector nozzle test
- Are fuel injector nozzles OK?

GO

Figure 10-1 (Sheet 1 of 2)

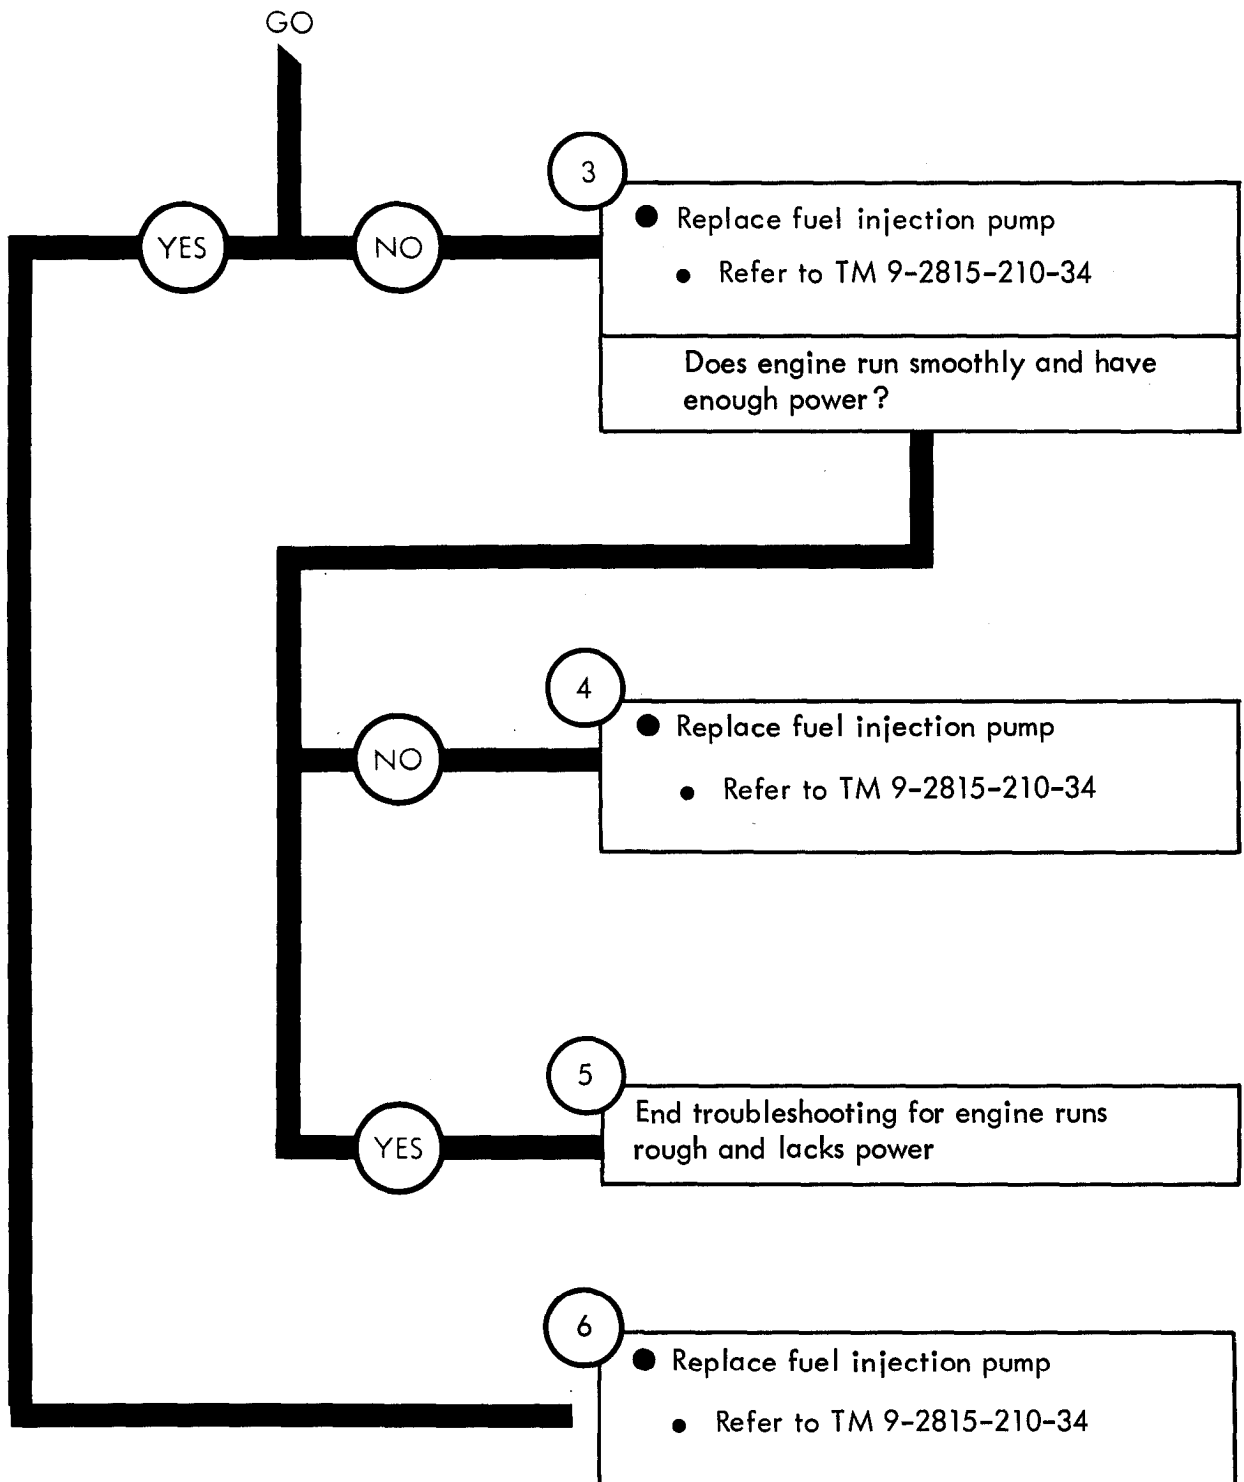

Figure 10-1 (Sheet 2 of 2)

Symptom

2

ENGINE CRANKS BUT DOES NOT START

WARNING

Diesel fuel is very flammable. Care must be used when choosing a place to work on fuel system. Keep truck about 50 feet away from an area where open flame, sparks, or smoking may cause a fire. Keep a fire extinguisher close by

NOTE

The following procedure will need the use of two soldiers. The lead soldier will be called soldier A. The helper will be called soldier B

1

● Check for fuel supply from fuel injection pump

SOLDIER A: Loosen one fuel injector nozzle fitting but do not take it off

SOLDIER B: Crank engine for 5 seconds. Refer to TM 9-2320-209-10

SOLDIER A: See if fuel comes out of fuel injector nozzle fitting

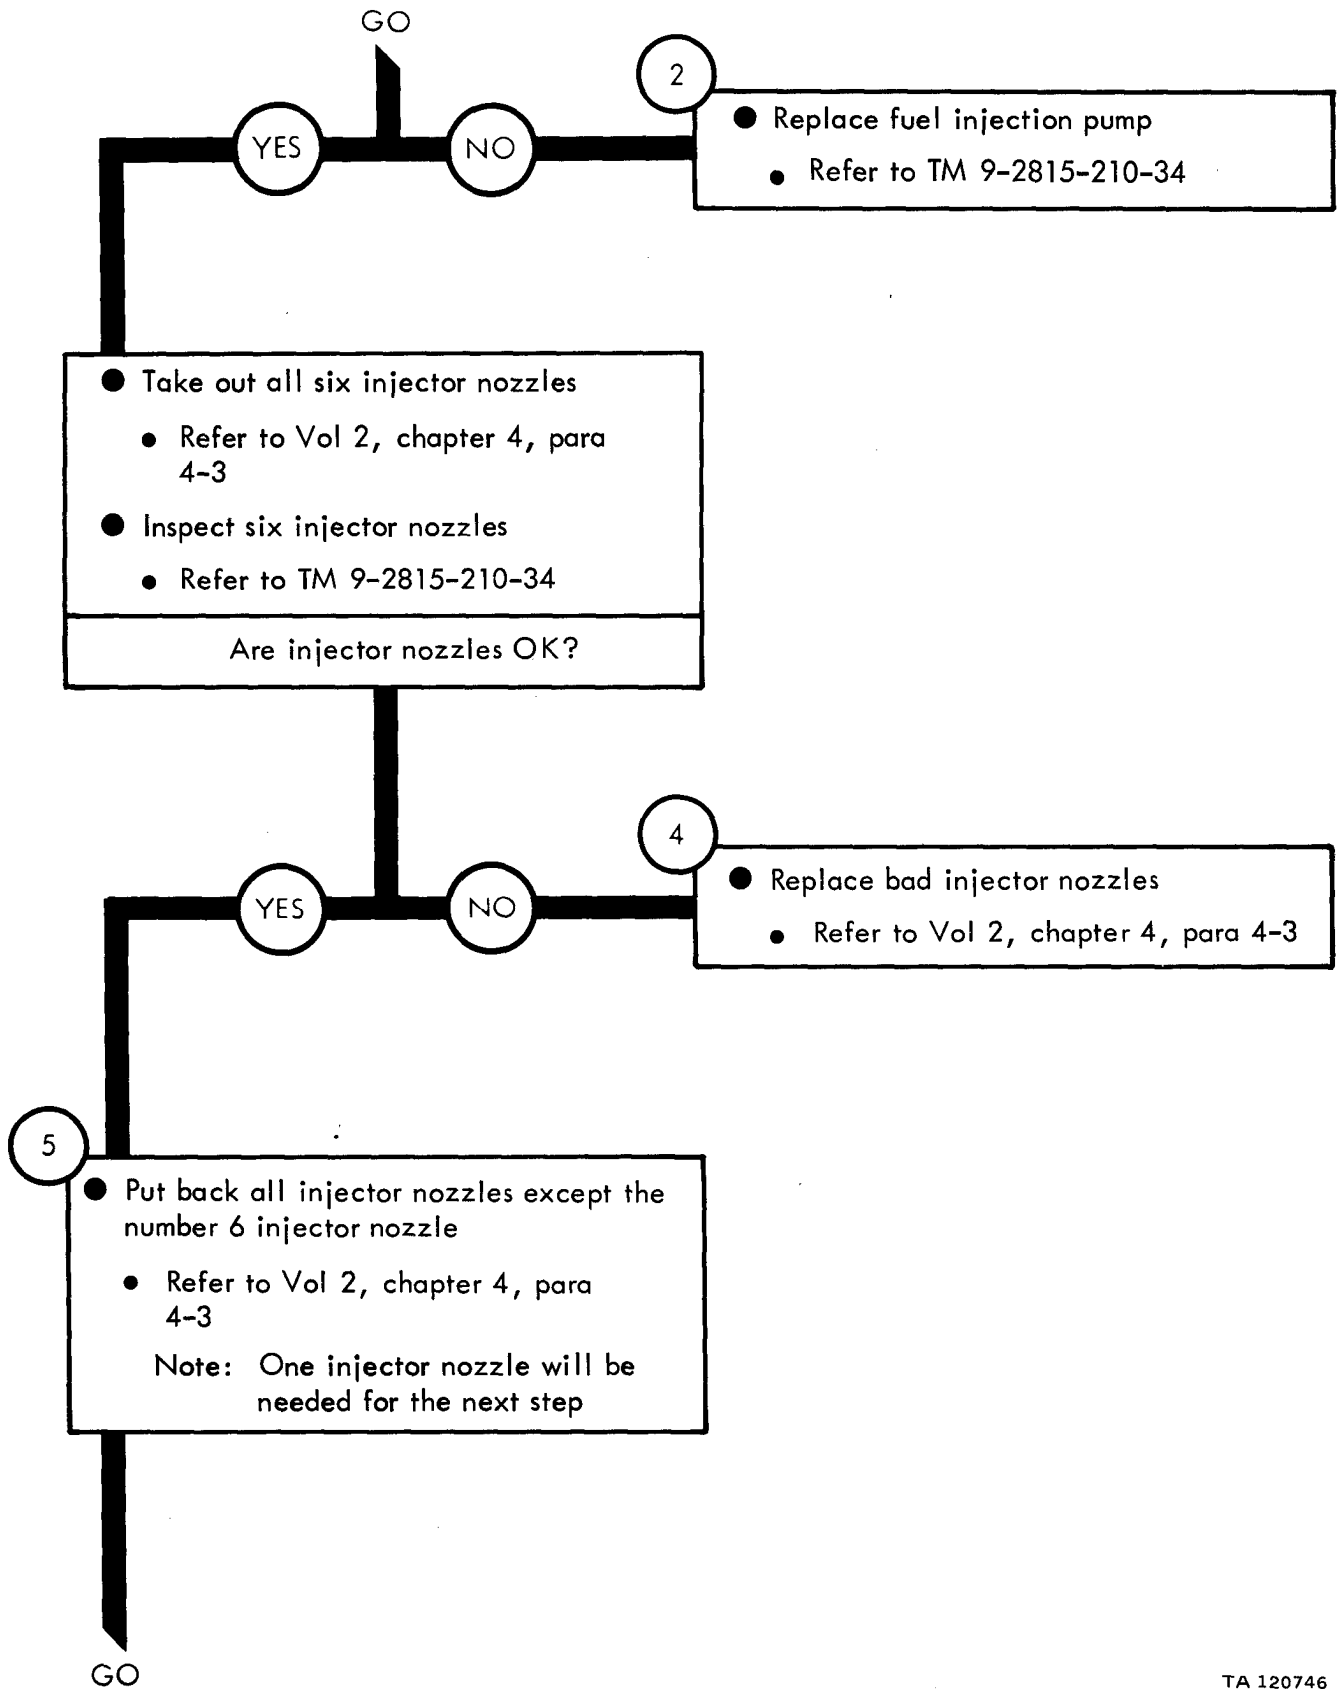

Does fuel come out of fitting?

GO

TA 120745

Figure 10-2 (Sheet 1 of 3)

TA 120746

Figure 10-2 (Sheet 2 of 3)

GO

WARNING
Fuel coming out of an injector nozzle under pressure can go through the skin. This can cause blood poisoning. Keep hands away from injector nozzle when doing the next step

6

- Put number 6 fuel injector nozzle onto fuel supply tube

SOLDIER A: Connect injector nozzle to fuel supply tube. See figure 11-1

SOLDIER B: Crank engine for 5 seconds

SOLDIER A: See if correct fuel spray pattern comes from injector nozzle. Refer to figure 11-1

Is fuel spray pattern OK?

NO

7

- Replace fuel injection pump
- Refer to TM 9-2815-210-34

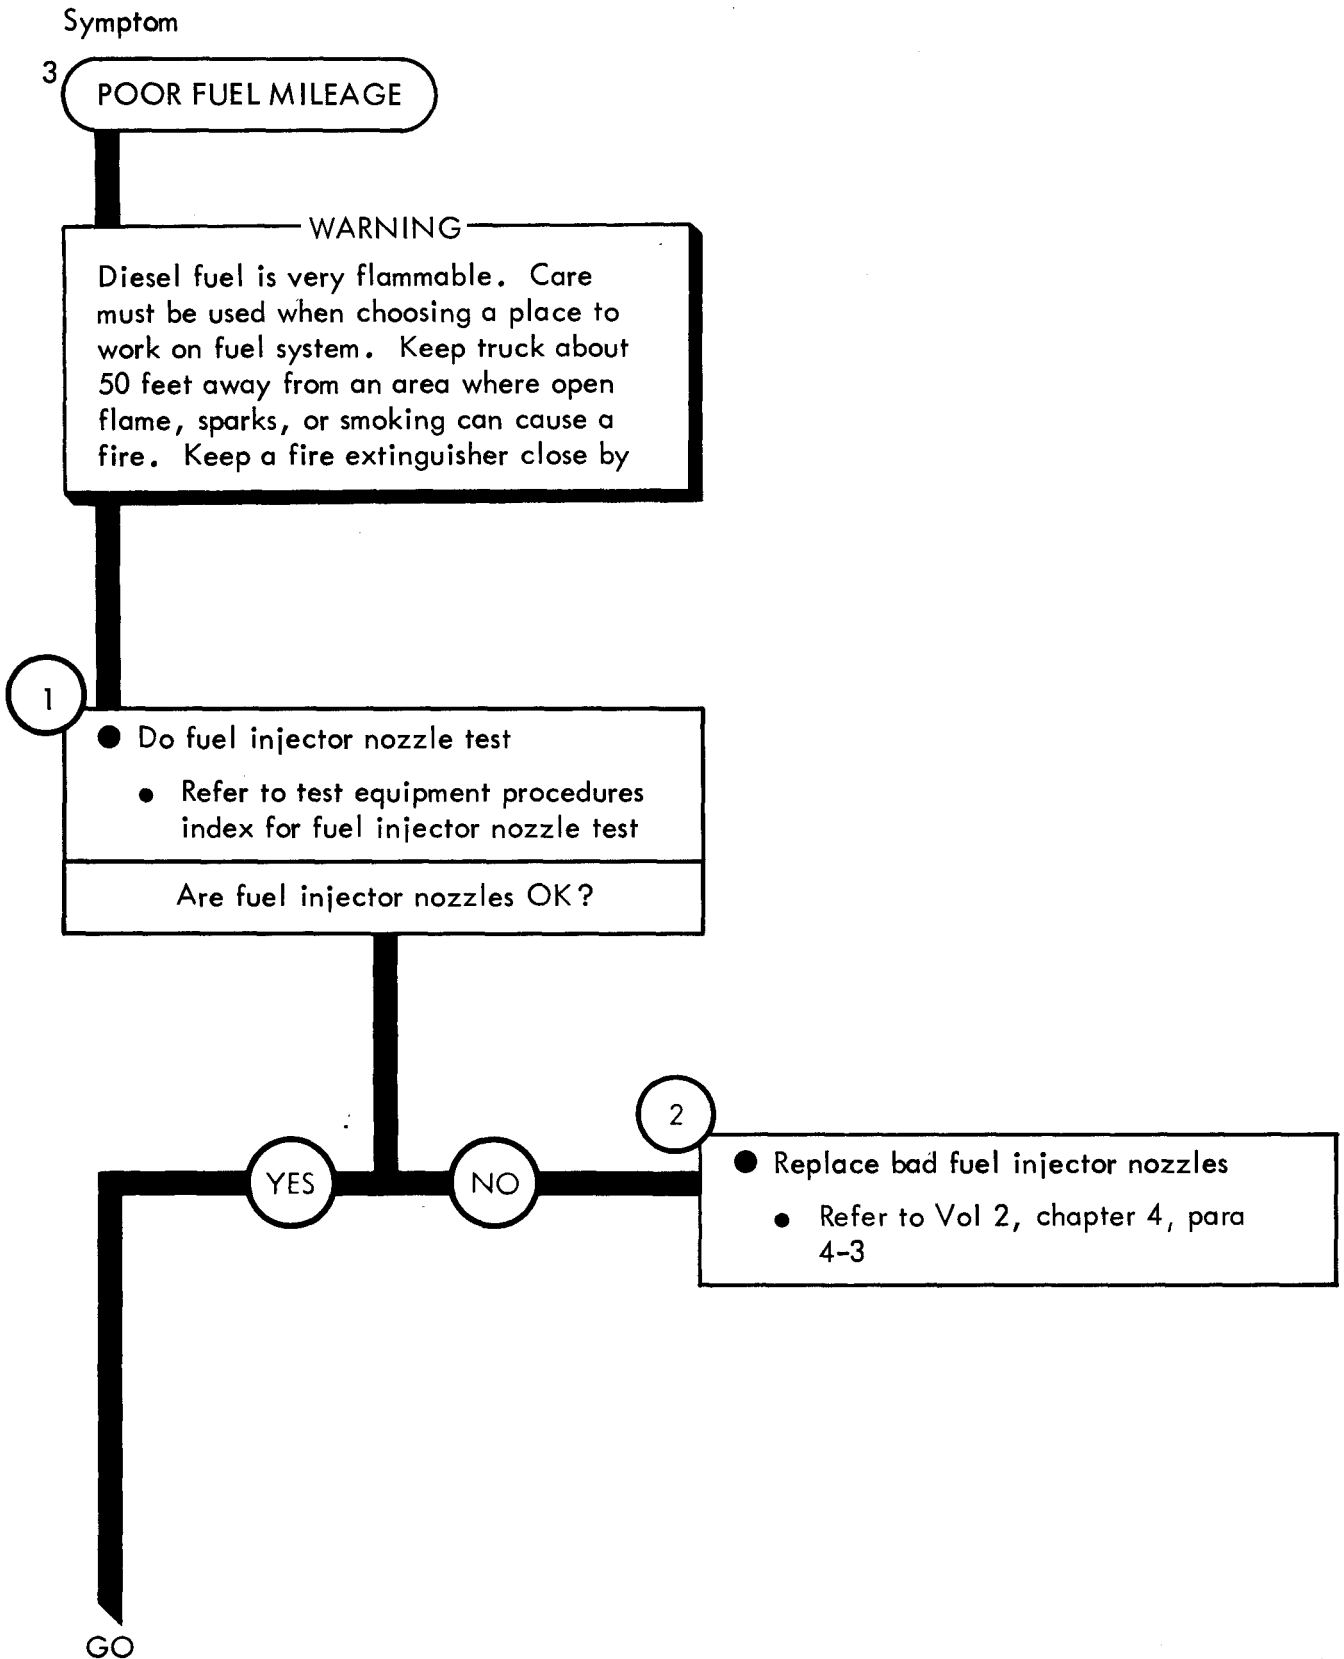

YES

8

- Adjust fuel injection pump timing
- Refer to TM 9-2815-210-34

TA 120747

CHAPTER 11

FUEL SYSTEM SUPPORT DIAGRAMS

11-1. GENERAL This chapter gives the diagrams you need when doing troubleshooting procedures in chapter 10. Figure 3-1 is a complete listing of all support diagrams used in this manual.

Figure 11-1. Fuel System Support Diagram

TA 120751

CHAPTER 12

FUEL SYSTEM TEST PROCEDURES

12-1. GENERAL. This chapter gives test procedures for the tests given in chapter 10, for the fuel system.

12-2. TEST SET-UP. Instructions for setup of test equipment and parts to be tested are given before the test procedures. Illustrations are used, when needed, to show you how to hook up the test equipment to the part to be tested.

12-3. TEST PROCEDURE. Detailed step-by-step instructions, in flow chart form, are given for each test. The procedure calls out the type of test and the condition of the truck system for each part of testing. The step-by-step test will lead you to the bad component or to a fault symptom within a related system. Reference is made to the fault symptom index, chapter 6, if the test shows a fault in another system.

FUEL SYSTEM TROUBLESHOOTING TESTS

FUEL INJECTOR NOZZLE TEST

1

- Start and warm up engine
 - Refer to TM 9-2320-209-10

WARNING

Diesel fuel is very flammable. Care must be used when choosing a place to work on fuel system. Keep truck about 50 feet away from an area where open flame, sparks, or smoking can cause a fire. Keep a fire extinguisher close by

NOTE

Put rag under line fittings before loosening to catch any fuel which drips out

2

- Loosen fuel injector nozzle fitting of one fuel injector nozzle and see if engine runs rougher
 - Note: If engine runs rougher the injector nozzle is OK
- Tighten fuel injector nozzle fitting
 - Note: Do procedure for all six fuel injector nozzle fittings

3

- Stop engine
 - Refer to TM 9-2320-209-10

TA 120752

Figure 12-1

CHAPTER 13

ELECTRICAL SYSTEM TROUBLESHOOTING

13-1. EQUIPMENT ITEMS COVERED. This chapter gives equipment troubleshooting procedures for the electrical system, for which there are authorized corrective maintenance tasks at the direct support and general support maintenance level.

13-2. EQUIPMENT ITEMS NOT COVERED. All equipment items for which corrective maintenance is authorized at the direct support and general support maintenance level are covered in this chapter.

ELECTRICAL SYSTEM TROUBLESHOOTING

Symptom

1 POWER PLANT HEATER OVERHEATS AND CONTINUES BURNING

NOTE

When measuring voltage +24 volts DC means a range of +23 to +26 volts DC

1

- Park truck
- Refer to TM 9-2320-209-10

2

- Check overheat temperature control for continuity
 - Take out overheat switch. Refer to Vol 2, chapter 21, para 21-6
 - Set multimeter to check continuity
 - Put multimeter - lead on contact of overheat temperature control and + lead on other end of overheat temperature control
 - Read multimeter. Multimeter should measure zero ohms
- Does multimeter measure zero ohms?

GO

TA 120753

Figure 13-1 (Sheet 1 of 2)

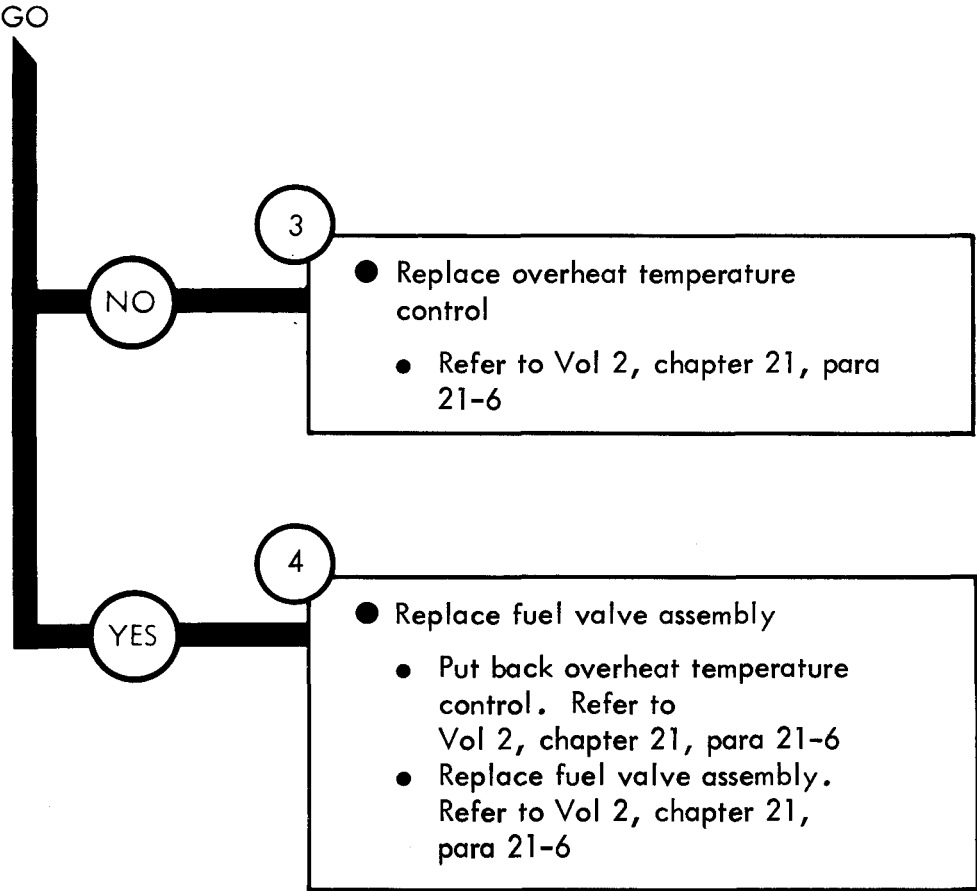

Figure 13-1 (Sheet 2 of 2)

Symptom

2 POWER PLANT HEATER DOES NOT GIVE OFF ENOUGH HEAT

NOTE

When measuring voltage +24 volts DC means a range of +23 to +26 volts DC

1

- Park truck
- Refer to TM 9-2320-209-10

2

- Check combustion blower for continuity
 - Disconnect combustion blower lead. Refer to Vol 2, chapter 21, para 21-6
 - Set multimeter to measure continuity
 - Put multimeter - lead on blower motor
 - Put multimeter + lead on blower motor lead
 - Read multimeter. Multimeter should measure zero ohms

Does multimeter measure zero ohms?

GO

3

POWER PLANT HEATER DOES NOT START

NOTE

When measuring voltage +24 volts DC means a range of +23 to +26 volts DC.

1

- Park truck
- Refer to TM 9-2320-209-10

2

- Check for +24 volts DC through control box circuit breaker
 - Take cover off control box. Refer to Vol 2, chapter 21, para 21-17
 - Set multimeter to measure +24 volts DC
 - Put multimeter - lead on one contact of circuit breaker
 - Put multimeter + lead on other contact of circuit breaker
 - Read multimeter. Multimeter should measure +24 volts DC

Does multimeter measure +24 volts DC?

Symptom

5 FUEL BURNING HEATER DOES NOT GIVE OFF ENOUGH HEAT

NOTE

When measuring voltage +24 volts DC means a range of +23 to +26 volts DC

1

- Park truck
- Refer to TM 9-2320-209-10

2

- Check resistance of heater resistor
 - Pull lead off both contacts of heater resistor
 - Set multimeter to measure resistance
 - Put multimeter - lead on one contact of resistor and + lead on other contact of heater resistor
 - Read multimeter, multimeter should measure resistance
 - Put multimeter - lead on contact where multimeter + lead was and + lead where - lead was for last test. Read multimeter. Multimeter should measure resistance

Did multimeter measure resistance for both tests?

HEATER RESISTOR

YES NO

3

- Replace heater resistor
- Refer to Vol 2, chapter 21, para 21-9

GO

VAN BODY TROUBLESHOOTING

Symptom

7 NO VAN LIGHTS OR EQUIPMENT WORK

WARNING

Only properly trained personnel should perform tests on van body 115 volt AC systems

The voltage present in 115 volt AC system can cause severe or fatal electric shock

- 1
 - Park truck
 - Refer to TM 9-2320-209-10

- 2
 - Check for 115 volt AC through external power cable
 - Pull external power cable plug from power entrance receptacle
 - Set multimeter to measure 115 volts AC
 - Put multimeter on large contact of power cable plug and keep it there
 - Put multimeter on each of the small contacts of power cable plug
 - Read multimeter for each contact tested. Multimeter should measure 115 volts AC
- Does multimeter measure less than 115 volts AC for any contact tested?

REAR WINCH (M764) SYSTEM TROUBLESHOOTING

19-1. EQUIPMENT ITEMS COVERED. This chapter gives equipment troubleshooting procedures for the M764 rear winch system, for which there are authorized corrective maintenance tasks at the direct support and general support maintenance level.

19-2. EQUIPMENT ITEMS NOT COVERED. All equipment items for which corrective maintenance is authorized at the direct support and general support maintenance level are covered in this chapter.

REAR WINCH TROUBLESHOOTING FOR M764

Symptom

WINCH DOES NOT PULL LOAD

1

- Park truck
 - Refer to TM 9-2320-209-10
 - Turn off winch. Refer to TM 9-2320-209-10
 - Turn off engine. Refer to TM 9-2320-209-10

2

- Check power takeoff
 - Take out power divider driveshaft. Refer to TM 9-2320-209-20
 - Start engine. Refer to TM 9-2320-209-10
 - Turn on power takeoff. Refer to TM 9-2320-209-10

Does flange turn?

YES

NO

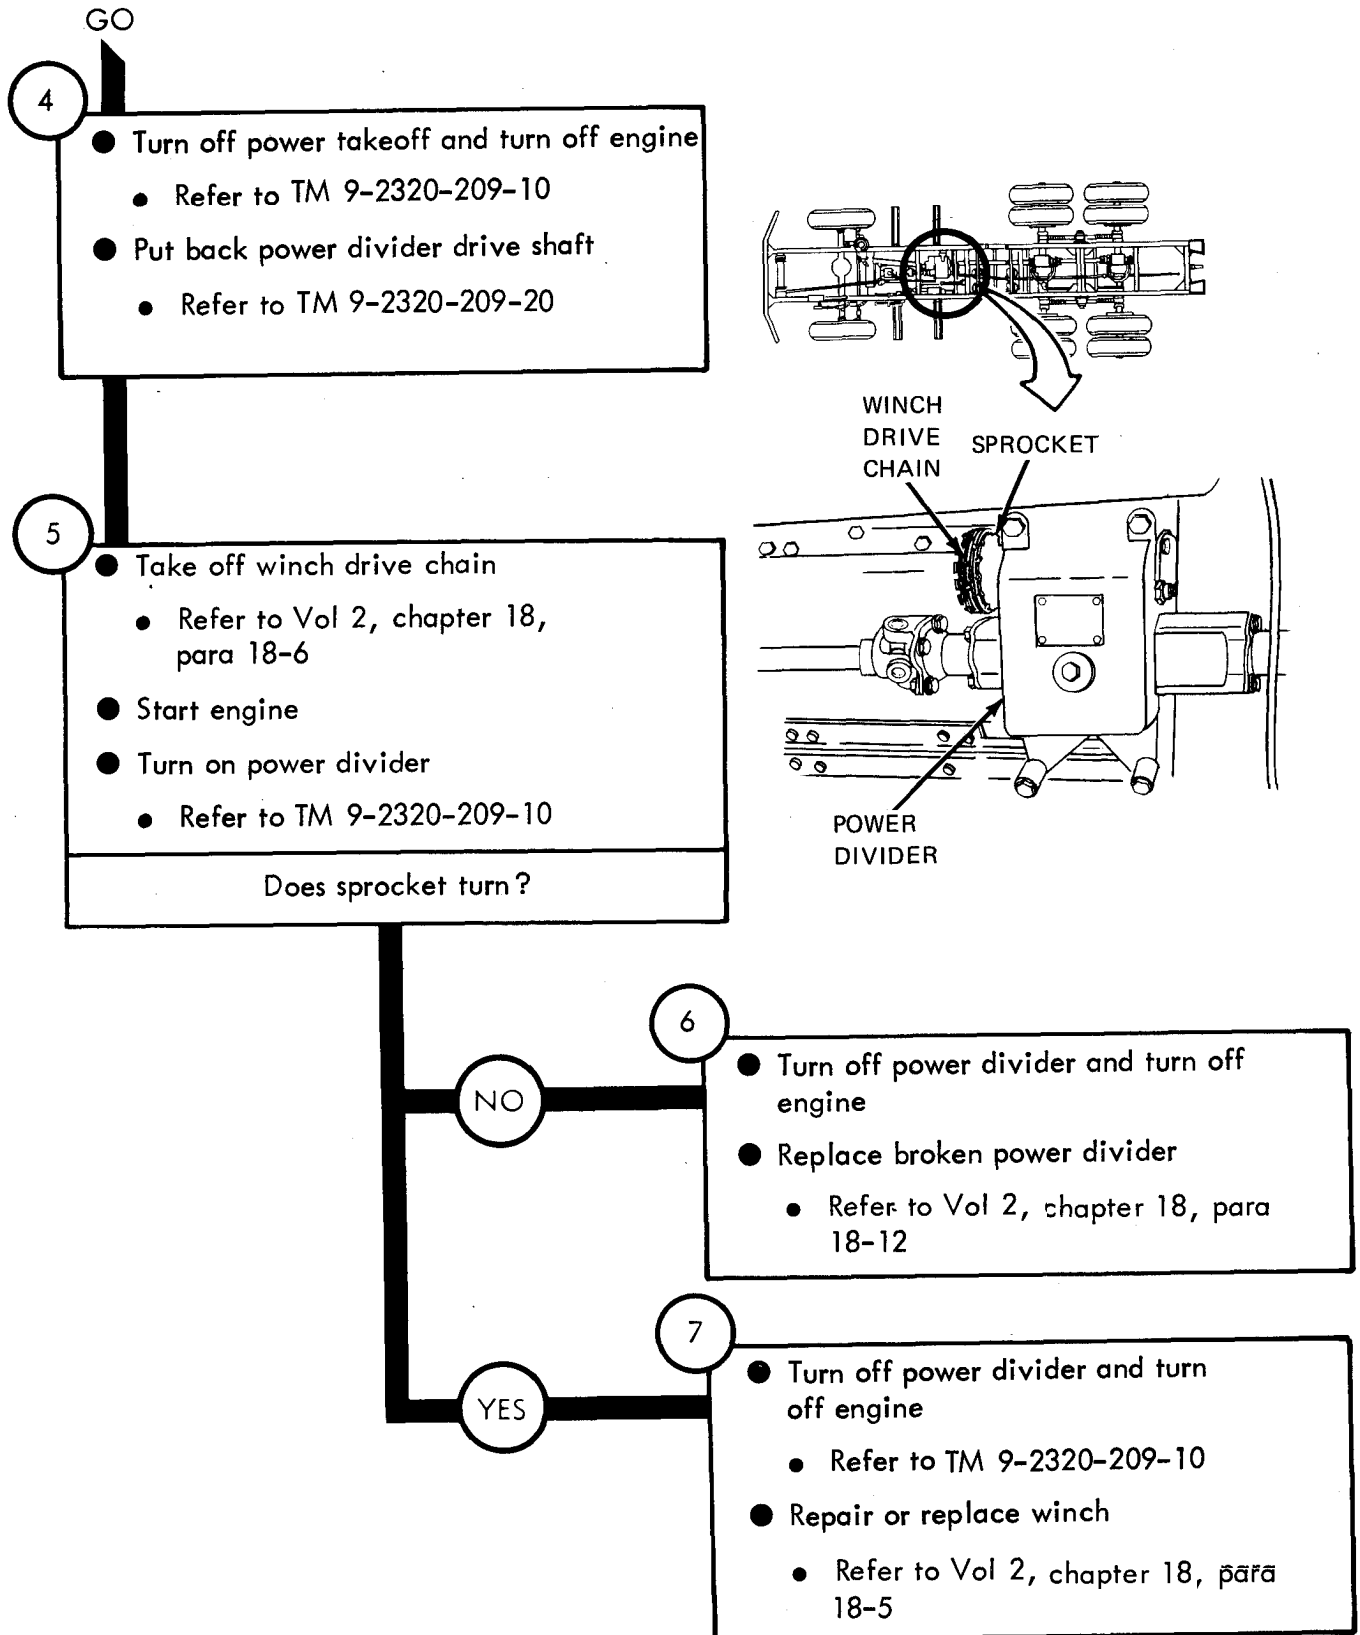

3

- Turn off power takeoff and turn off engine
 - Refer to TM 9-2320-209-10
- Replace broken power takeoff
 - Refer to Vol 2, chapter 18, para 18-16
- Put back power divider driveshaft
 - Refer to TM 9-2320-209-20

THE METRIC SYSTEM AND EQUIVALENTS

LINEAR MEASURE

1 Centimeter = 10 Millimeters = 0.01 Meters = 0.3937 Inches
 1 Meter = 100 Centimeters = 1,000 Millimeters = 39.37 Inches
 1 Kilo Meter = 1,000 Meters = 0.621 Miles

WEIGHTS

1 Gram = 0.001 Kilograms = 1,000 Milligrams = 0.035 Ounces
 1 Kilogram = 1,000 Grams = 2.2 Lb
 1 Metric Ton = 1,000 Kilograms = 1 Megagram = 1.1 Short
 Tons

LIQUID MEASURE

1 Milliliter = 0.001 Liters = 0.0338 Fluid Ounces
 1 Liter = 1,000 Milliliters = 33.82 Fluid Ounces

SQUARE MEASURE

1 Sq Centimeter = 100 Sq Millimeters = 0.155 Sq Inches
 1 Sq Meter = 10,000 Sq Centimeters = 10.76 Sq Feet
 1 Sq Kilometer = 1,000,000 Sq Meters = 0.386 Sq Miles

CUBIC MEASURE

1 Cu Centimeter = 1,000 Cu Millimeters = 0.06 Cu Inches
 1 Cu Meter = 1,000,000 Cu Centimeters = 35.31 Cu Feet

TEMPERATURE

$5/9 (^{\circ}\text{F} - 32) = ^{\circ}\text{C}$
 $212^{\circ}\text{ Fahrenheit is equivalent to } 100^{\circ}\text{ Celsius}$
 $90^{\circ}\text{ Fahrenheit is equivalent to } 32.2^{\circ}\text{ Celsius}$
 $32^{\circ}\text{ Fahrenheit is equivalent to } 0^{\circ}\text{ Celsius}$
 $9/5 \text{ C}^{\circ} + 32 = \text{F}^{\circ}$
