AM General has written permission from any and all such subcontractors holding copyrights to grant the United States Government a royalty free, nonexclusive and irrevocable license throughout the world for Governmental purposes to publish, translate, reproduce, deliver, perform, dispose of, and to authorize others so to do, all technical data now or hereafter covered by copyright. Any use other than that authorized above must be made with the express permission of AM General or the subcontractor whose copyrighted material is being used. This notice must be reproduced on all copies or portions thereof.

**WARNING****CARBON MONOXIDE POISONING CAN BE DEADLY**

Carbon monoxide is a colorless, odorless, poisonous gas, which, when breathed, deprives the body of oxygen and causes suffocation. Exposure to air contaminated with carbon monoxide produces symptoms of headache, dizziness, loss of muscular control, apparent drowsiness, or coma. Permanent brain damage or death can result from severe exposure.

Carbon monoxide occurs in the exhaust fumes of fuel-burning internal combustion engines and can become dangerous under conditions of inadequate ventilation. The following precautions must be observed to insure the safety of personnel:

- A. DO NOT operate the engine of a vehicle in an enclosed area unless it is ADEQUATELY VENTILATED.
- B. DO NOT idle the engine for long periods without maintaining ADEQUATE VENTILATION in the personnel compartments.
- C. DO NOT drive any vehicle with inspection plates, cover plates, or engine compartment doors removed unless it is necessary for maintenance purposes.
- D. BE ALERT at all times during vehicle operation for exhaust odors, and exposure symptoms. If either are present, IMMEDIATELY VENTILATE the personnel compartments. If symptoms persist, remove affected personnel from the vehicle and treat as follows:
  - (1) Exposure to fresh air.
  - (2) Keep warm.
  - (3) DO NOT PERMIT EXERCISE.
  - (4) If necessary, administer artificial respiration (see FM 21-11).

**THE BEST DEFENSE AGAINST CARBON MONOXIDE POISONING IS ADEQUATE VENTILATION.**

**COMPRESSED AIR**

Compressed air used for cleaning purposes will not exceed 30 psi. Use only with effective chip guarding and personal protective equipment (goggles/shield, gloves, etc.).

**WINCH HYDRAULIC RESERVOIR (M916 AND M920)**

Do not remove fill cap when hydraulic fluid is hot. The hydraulic tank is pressurized to 5 psi. Remove the fill cap slowly.

|                |
|----------------|
| <b>WARNING</b> |
|----------------|

### **COOLING FAN**

When working in the engine compartment with the engine running, stay clear of the cooling fan. The fan may engage automatically at any time and could cause serious injury.

### **PUSHER AXLE (M917, M919, AND M920)**

When the pusher axle is in the up position it freewheels. DO NOT USE THE PUSHER AXLE AS A STEP. You can fall and be injured. Always lower the pusher axle when the vehicle is parked.

### **FILLING THE RADIATOR**

Let the radiator cool before removing cap. Remove radiator cap in two steps. First, place a thick cloth over the cap and slowly rotate cap left to its first stop; pause, and let pressure escape from cooling system. Then rotate cap farther left until you can remove it. Failure to follow this procedure can result in serious burns.

### **LIFTING THE TRUCK**

Improper use of lifting equipment and attachment of cables to the truck can result in serious personnel injury and equipment damage. OBSERVE ALL STANDARD RULES OF SAFETY.

### **HOOD SAFETY LATCH**

After raising hood, insert the S-shaped safety hook through two matching holes in the prop channels to prevent the hood from falling accidentally.

### **EXHAUST PIPE AND MUFFLER**

During normal operation the exhaust pipe and muffler can become very hot. Be careful not to touch these components with your bare hands. Do not allow your body to come in contact with the pipe or muffler. Exhaust system components may be hot enough to cause serious burns.

TRUCK CHASSIS, 75,000 GVWR, 8x6,  
FOR CONCRETE- MOBILE MIXER TRUCK  
M919 (NSN 3895-01-028-4391)

**DISTRIBUTION STATEMENT A-** Approved for public release; distribution is unlimited.

TM 9-2320-273-20, 28 November 1980, is changed as follows:

1. Remove old pages and insert new pages as indicated below.

Remove Pages

B-1 through B-20  
Sample and DA Forms 2028

Insert Pages

A and B  
B-1 through B-20.2  
Sample and DA Forms 2028

2. File this changed sheet in the front of the publication for information purposes.

This change implements Army Maintenance Transformation and changes the Maintenance Allocation Chart (MAC) to support Field and Sustainment Maintenance.

By Order of the Secretary of the Army:

Official:

  
SANDRA R. RILEY  
*Administrative Assistant to the  
Secretary of the Army*

0517806

PETER J. SCHOOMAKER  
*General, United States Army  
Chief of Staff*

DISTRIBUTION: To be distributed in accordance with the initial distribution (IDN) 380298 requirements for TM 9-2320-273-20.

---

## HOW TO USE THIS MANUAL

---

This manual contains the following information to help you understand how the truck/tractor works, how to service it, and how to make authorized repairs.

---

## WHAT THIS MANUAL CONTAINS

---

This manual is divided into chapters which provide the following information:

### CHAPTER 1 – INTRODUCTION

This chapter contains general information on different truck/tractor models covered in this manual. Included are illustrations showing the inside and outside of the vehicle.

### CHAPTER 2 – PRINCIPALS OF OPERATION

This chapter contains information on how the vehicle works. It is divided into sections by function: fuel system, oil system, etc. (see Table of Contents for complete listing).

### CHAPTER 3 – TRUCK/TRACTOR MAINTENANCE

This is the integrated maintenance chapter. It includes information that applies to all the maintenance chapters that follow (chapter 4 thru 11), including the following important information:

- a. When to inspect, test, and service the vehicle. (Preventive Maintenance Checks and Services.)
- b. How to find the best troubleshooting procedures for a specific problem. (Troubleshooting Symptom Index.)

### CHAPTERS 4 THRU 12 - INDIVIDUAL MAINTENANCE CHAPTERS (See Table of Contents).

These chapters give you the following information:

- a. How to find out what's causing a problem. (Troubleshooting Procedures.)
- b. A list of authorized maintenance procedures. (Maintenance Task Summaries.)
- c. Detailed procedures for replacing and servicing component parts (Task Procedures). Procedures include a list of special tools that you'll need (if any), materials required and references to other manuals, if needed.

This listing includes the nomenclature cross reference list and the list of abbreviations used in this manual.

---

**A. NOMENCLATURE CROSS REFERENCE LIST**

---

**Common Name**

Air Cooler, Intercooler  
 Drive Shaft  
 Power Steering Cylinder  
 Dual Control Valve, Treadle Valve  
 Crankcase Breather  
 Antifreeze, Ethylene Glycol Mixture  
 Power Transfer/Differential Lockup Control  
 Cold Start System  
 Tail Pipe  
 Float Switch  
 Power Steering Pump, Power Steering Reservoir  
 Ratio Valve  
 Differential Lockout Engaged Switch  
 Splash Shields  
 Intermediate Pipe  
 Brake Control Valve  
 PTO Propeller Shaft U-Joint  
 Jacobs Brake Cover, Valve Cover,  
 Cylinder Head Cover  
 Stowage Box  
 Cross Tube  
 Hand Control Valve for Trailer  
 Exhaust Pipe

**Official Nomenclature**

Aftercooler  
 Propeller Shaft  
 Auxiliary Assist Cylinder  
 Dual Brake Valve  
 Breather Tube  
 Coolant  
 Differential Lockup Control  
 Ether Quick-Start System  
 Exhaust Stack  
 Fuel Level Sending Unit  
 Hydraulic Pump and Reservoir Assembly  
 Limiting Valve  
 Lockout Switch  
 Mud Flaps  
 Muffler Inlet Pipe  
 Park Brake Valve  
 PTO-to-Pump Coupling  
  
 Rocker Arm Housing Cover  
 Seat Risers and Tool Box  
 Tie Rod  
 Trailer Brake Valve  
 Turbo Outlet Pipe

### **Reporting Equipment Improvement Recommendations (EIR's).**

EIR's can and must be submitted by anyone who is aware of an unsatisfactory condition with the equipment design or use. It is not necessary to show a new design or list a better way to perform a procedure, just simply tell why the design is unfavorable or why a procedure is difficult. See TM 38-750. Mail EIR's directly to Commander, U.S. Army Tank Automotive Materiel Readiness Command, ATTN: DRSTA-MTC, Warren, Michigan, 48090. A reply will be furnished to you.

### **Equipment Improvement Report and Maintenance Digest (EIR MD) and Equipment Improvement Report and Maintenance Summary (EIR MS).**

The quarterly Equipment Improvement Report and Maintenance Digest, TB 43-0001-39 series, contains valuable field information on the equipment covered in this manual. The information in the TB 43-0001-39 series is compiled from some of the Equipment Improvement Reports that you prepared on the vehicles covered in this manual. Many of these articles result from comments, suggestions, and improvement recommendations that you submitted to the EIR program. The TB 43-0001-39 series contains information on equipment improvements, minor alterations, proposed Modification Work Orders (MWO'S), warranties (if applicable), actions taken on some of your DA Form 2028's (Recommended Changes to Publications), and advance information on proposed changes that may affect this manual. In addition, the more maintenance significant articles, including minor alterations, field-fixes, etc., that have a more permanent and continuing need in the field are republished in the Equipment Improvement Report and Maintenance Summary (EIR MS) for TARCOM Equipment (TM 43-0143). Refer to both of these publications (TB 43-0001-39 series and TM 43-0143) periodically, especially the TB 43-0001-39 series, for the most current and authoritative information on your equipment. The information will help you in doing your job better and will help in keeping you advised of the latest changes to this manual. Also refer to DA Pam 310-4, Index of Technical Publications, and Appendix A, References, of this manual.

## CHAPTER 1

### INTRODUCTION

---

---

#### **1-1. OVERVIEW.**

---

This chapter provides you with the following information:

- a. Forms and record data required for maintenance.
- b. Physical description of each truck model and major equipment components.

---

### **Section I GENERAL INFORMATION**

---

---

#### **1-2. SCOPE.**

---

Type of Manual: Organizational Maintenance.

Model Numbers and Equipment Names (fig. 1-1):

- a. M915 Line Haul Truck Tractor
- b. M916 Light Equipment Transporter Truck Tractor
- c. M917 20-Ton Dump Truck
- d. M918 Bituminous Distributor Truck
- e. M919 Concrete Mobile Mixer Truck
- f. M920 Medium Equipment Transporter Truck Tractor

Chassis Designations:

- a. Type I – Model M915
- b. Type II – Models M916 and M918
- c. Type III – Models M917, M919, and M920

---

#### **1-3. MAINTENANCE FORMS, RECORDS, AND REPORTS.**

---

Department of the Army forms and procedures used for equipment maintenance will be those prescribed by TM 38-250, The Army Maintenance Management System.

---

#### **1-4. DESTRUCTION OF ARMY MATERIEL TO PREVENT ENEMY USE.**

---

Requirements and procedures for destruction of Army materiel to prevent enemy use are given in TM 750-244-6.

---

## 1-5. ADMINISTRATIVE STORAGE.

---

Storage information is given in TM 740-90-1, Administrative Storage.

---

## Section II EQUIPMENT DESCRIPTION AND DATA

---

---

### 1-6. PURPOSE OF EQUIPMENT.

---

- Model M915. Used for on-road line hauling of loads up to a gross vehicle weight rating of 50,000 lbs (22,680 Kg), 30,000 lbs (13,608 Kg) on fifth wheel.
  
- Model M916. Used for transporting light equipment, both on and off the road, up to a gross vehicle weight rating of 56,000 lbs (25,402 Kg), 28,000 lbs (12,700 Kg) on fifth wheel.
  
- Model M917. A heavy-duty, 20-ton dump truck used to haul aggregate and similar materials. Capable of operating both on and off the road, up to a gross vehicle weight rating of 75,000 lbs. Hauls 15.2 cu yds (11.62 cu m) heaped, and 19.6 cu yds (14.98 cu m) with 12 inch sideboards.
  
- Model M918. Used with a mounted bituminous distributor to spread 375 gallons (1,419.52 liters) of bitumen per minute at a road speed of 1.5 miles per hour (2.41 K/H).
  
- Model M919. Used with a mounted concrete mixer to mix and spread concrete at a maximum rate of 40 cu ft per minute. Can transport sufficient cement, sand, coarse aggregate and water to mix 8 cu yds (6.12 cu m) on-site.
  
- Model M920. Used to transport medium equipment both on and off the road, up to a gross vehicle rating of 75,000 lbs (34,020 Kg), 40,000 lbs (18,144 Kg) on fifth wheel.

---

### 1-7. CAPABILITIES AND FEATURES.

---

- a. Interchangeable frame components (Exception: Frames for Types II and III chassis have an added 3/8-inch outer channel.)
- b. Commercial-type replacement parts for entire vehicle, available through national network of dealers and vendors.
- c. Commercial operating components that require no special maintenance procedures and a minimum of special tools:
  - (1) Six-cylinder, in-line, four-stroke, four-cycle turbocharged diesel engine.
  - (2) Semi-automatic, centrifugal clutch transmission with 16 forward and 2 reverse speeds.
  - (3) Transfer case for front wheel drive (M916 thru M920).
  - (4) Pusher axle for weight distribution (M917, M919, and M920).
  - (5) Rear tandem axle.
  - (6) Power Takeoff (PTO) for power to drive accessories (M916 thru M920).
  - (7) Winch (M916 and M920).

## 1-8. LOCATION OF MAJOR EXTERIOR COMPONENTS.

The illustration below identifies the major exterior components located on one or more models of M915 thru M920 vehicles. See table 1-1, Differences Between Models for model configuration differences and a reference to detailed information. Also see the Operator's Manual TM 9-2320-273-10.

TA 074554

### 1-9. LOCATION OF MAJOR INTERIOR COMPONENTS.

The illustration below identifies the major interior components located on the M915 thru M920 vehicles. No identification plates, instruction plates, warranty plates, modification plates or stencils are applicable to organizational maintenance.

### 1-10. DIFFERENCES BETWEEN MODELS.

The major equipment and functional differences between models are given in table 1-1. For illustrations and descriptions, refer to the following:

- a. Illustration of each model (fig. 1-1).
- b. Purpose of each model (para 1-6).
- c. Differences between models (table 1-1).

Table 1-1. Differences Between Models.

| EQUIPMENT/FUNCTION                  | VEHICLE MODEL |      |      |      |      |      | DESC/REF<br>(PARA) |
|-------------------------------------|---------------|------|------|------|------|------|--------------------|

## CHAPTER 2

### PRINCIPLES OF OPERATION

---

---

#### 2-1. OVERVIEW.

---

This chapter explains the functioning of chassis components you will be maintaining at the Organizational level, and how these components relate to each other. The explanation is broken down into the following sections:

- a. Truck/Tractor Chassis (para 2-2 thru 2-5).
- b. Engine (para 2-6, 2-7).
- c. Engine Controls (para 2-8 thru 2-10).
- d. Transmission and Controls (para 2-11, 2-12).
- e. Power Transfer Case and Rear Axle Differential Lockup (para 2-13, 2-14).
- f. Pusher Axle and Controls (para 2-15, 2-16).
- g. Front Axle and Suspension (para 2-17 thru 2-19).
- h. Rear Axle (para 2-20 thru 2-22).
- i. Fuel and Air Intake System (para 2-23 thru 2-25).
- j. Engine Oil System (para 2-26 thru 2-28).
- k. Exhaust System (para 2-29, 2-30).
- l. Cooling System (para 2-31 thru 2-33).
- m. Relays, Circuit Breakers, and Wire Identification (para 2-34 thru 2-36).
- n. Starting and Starting Control System (para 2-37, 2-38).
- o. Ether Quick-Start (para 2-39, 2-40).
- p. Batteries and Power Generating System (para 2-41, 2-42).
- q. Service Lighting System (para 2-43 thru 2-49).
- r. Blackout Lighting System (para 2-50, 2-51).
- s. Instrumentation (para 2-52).
- t. Electric Horn (para 2-53, 2-54).
- u. Cab Heating and Ventilating Systems (para 2-55 thru 2-58).
- v. Compressed Air System (para 2-59, 2-60).
- w. Brake System (para 2-61 thru 2-70).
- x. Auxiliary Air-Powered Systems (para 2-71 thru 2-74).
- y. Steering System (para 2-75, 2-76).
- z. Power Takeoff (para 2-77, 2-78).
- aa. Winch (para 2-79, 2-80).
- bb. Winterization Kit (para 2-81, 2-82).

---

## **2-1. OVERVIEW (Continued).**

You can find other basic information about the M915, M916, and M920 Truck Tractors and Chassis for the M917, M918, and M919 in:

- a. Chapter 5, section II (Circuit Descriptions).
- b. Appendix D (Schematic Diagrams).
- c. TM 9-2320-273-10 (Operating Instructions for the M915, M916, and M920 Truck Tractors and Chassis for the M917, M918, and M919).

---

## **Section I TRUCK/TRACTOR CHASSIS**

---

### **2-2. INTRODUCTION.**

Following is a description of the basic chassis and cab and illustrations of the power train. You will find detailed descriptions of the major components shown in subsequent sections in this chapter.

---

### **2-3. BASIC CHASSIS AND CAB.**

The basic chassis and cab for all M915 thru M920 vehicles is the Crane Carrier Corporation Centaur Model T3824. Three frame types are used, each designated by its corresponding chassis.

- a. Type I for Model M915 (6 x 4 tractor).
- b. Type II for Model M916 (6 x 6 tractor).
- c. Type II for Model M918 (6 x 6 bituminous distributor).
- d. Type III for Model M917 (8 x 6 dump truck).
- e. Type III for Model M919 (8 x 6 Concrete-Mobile® mixer).
- f. Type III for Model M920 (8 x 6 tractor).

The same basic frame is used for each type design. Type II and Type III frames differ from Type I frame by the addition of a 3/8-inch outer channel. The designations given above (6 x 4, 6 x 6 and 8 x 6) refer to the number of wheel positions on the vehicle (first digit) and number of drive wheel positions (second digit). For example: 6 x 4 indicates six wheel positions (inside wheels on rear axles are not counted), and four driving wheel positions.

## 2-4. POWER TRAIN M915.

## 2-5. POWER TRAIN – M916 thru M920.

### NOTE

Pusher Axle (not shown) on Models M917, M919, and M920 is non-driving unit.

---

## Section II ENGINE

---

### 2-6. INTRODUCTION.

The Cummins NTC-400 Engine is used on all M915 thru M920 vehicles. It is an inline, six-cylinder, four-stroke, four-cycle, turbocharged diesel engine. The engine is common to other production truck diesel engines, without special operating or maintenance requirements. This section provides you with illustrations that identify major exterior components. See one of the following associated engine systems in this chapter for details:

- a.* Engine Controls (section III).
- b.* Fuel and Air Intake System (section IX).
- c.* Engine Oil System (section X).
- d.* Exhaust System (section XI).
- e.* Cooling System (section XII).
- f.* Starting and Starting Control System (section XIV).
- g.* Ether Quick-Start System (section XV).
- h.* Batteries and Power Generating System (section XVI).

## 2-7. ENGINE EXTERIOR COMPONENTS.

TA 237210

## Section III ENGINE CONTROLS

### 2.8. INTRODUCTION.

Cab engine controls for all M915 thru M920 vehicles are identical. Special body engine speed controls for models M917, M918, and M919 are described in the following manuals:

- a. M917 Dump Truck – TM 5-3805-274-24 & P.
- b. M918 Bituminous Distributor – TM 5-3895-371-24 & P.
- c. M919 Concrete - Mobil®Mixer – TM 5-3895-372-20.

### 2.9. ENGINE SPEED CONTROLS.

1. HAND THROTTLE. Allows manual control of engine rpm. Throttle motion is transferred by cable to engine mounted pivot lever (6).
2. THROTTLE CABLE. Flex cable from hand throttle to engine mounted pivot lever (6).
3. ACCELERATOR PEDAL. Connected by mechanical linkage to under cab pivot lever (4).
4. PIVOT LEVER. Mechanical linkage that connects accelerator pedal to accelerator rod.
5. ACCELERATOR ROD. Connects accelerator pedal and throttle linkage to accelerator lever on fuel pump.
6. ENGINE MOUNTED PIVOT LEVER. This lever connects the under dash hand throttle cable (ALL) and the winch throttle cable (M916 and M920) to the accelerator rod.
7. ACCELERATOR LEVER. This lever *controls the flow of fuel through the fuel pump thus setting engine speed.*
8. FUEL CONTROL RETURN SPRING. Return accelerator lever to normal position when hand throttle and accelerator pedal are not engaged.

TA 074558

## **2-10. ENGINE RETARDER BRAKE CONTROLS.**

### **NOTE**

In reading the following descriptions make sure that the throttle switch is in its normally-closed position.

1. ENGINE RUN SWITCH. Energizes the 12-volt electrical system, including engine retarder brake circuit.
2. ENGINE RETARDER SWITCH. Three-position switch allows driver to select engine braking for two cylinders (LOW), four cylinders (MED), or six cylinders (HIGH). Depressing foot pedal actuated switch completes 12-volt power circuit to energize one, two, or three solenoids.

**2-10. ENGINE RETARDER BRAKE CONTROLS (Continued).**

3. CIRCUIT BREAKER (CB-6). Protects electrical components of engine retarder brake circuit by opening when load exceeds 20 amps. Automatically recycles until the overload is removed.
4. FLOOR PEDAL SWITCH. Allows driver to activate engine brake circuit with his left foot. When depressed, switch supplies 12-volt power through CB-6, throttle switch, engine retarder switch, to energize the selected solenoid valve.
5. THROTTLE SWITCH. Open switch prevents activation of engine retarder brake if hand throttle is pulled out or accelerator pedal is pressed down. Activating arm on fuel pump lever closes switch when hand throttle and accelerator are both disengaged.
6. SOLENOID VALVES. When valves are activated, they operate engine braking mechanism.

TA 074559

---

**Section IV TRANSMISSION AND CONTROLS**

---

---

**2-11. INTRODUCTION.**

---

The Caterpillar D7155 transmission is used on all M915 thru M920 trucks. It is a mechanical drive unit with 16 forward speeds and 2 reverse speeds. The transmission is bolted directly to engine fly-wheel housing.

---

**2-12. TRANSMISSION AND CONTROLS.**

---

1. ENGINE RUN SWITCH. Energizes the 12-volt electrical system, including the transmission oil temperature gage circuit.
2. TRANSMISSION OIL TEMPERATURE GAGE. Signal from sending unit actuates pointer gage showing transmission oil temperature.
3. CIRCUIT BREAKER (CB-6). Protects electrical components of transmission oil temperature circuit when load exceeds 20 amps. Automatically recycles until the overload is removed.
4. RATIO SELECTOR UNIT. Floor-mounted, houses transmission controls.
5. GEAR SELECTOR. Allows operator to select desired gear.
6. TRANSMISSION AIR CHARGING VALVE. Used to charge control line when starting up.
7. CONTROL LINE. Carries pneumatic pressure which controls pressure from supply line. Normal air pressure is 90-120 psi (transmission is disengaged if air pressure drops below 60 psi).
8. BREATHERS. Prevent air pressure buildup in case.
9. SUPPLY LINE. Pneumatic pressure, controlled by line from ratio selector and sets transmission to selected gear. Normal air pressure is 90-120 psi (transmission is disengaged if air pressure drops below 60 psi).
10. SPEEDOMETER CABLE. Provides engine speed input to tachograph.
11. TRANSMISSION OIL COOLER. Two hydraulic lines carry warm oil from the transmission to an oil cooler mounted in front of radiator. Once cooled, the oil is returned to the transmission.
12. DIPSTICK AND OIL FILL PORT. Used to inspect and replenish oil supply. Normal capacity: at oil change 5.5 gallons (21 liters) of engine oil.
13. DRAIN PLUG. Provides access for draining oil. Has magnetic base to attract foreign particles in the oil and warn of unusual wear of the internal parts.
14. SUPPLY RESERVOIR. Provides air supply line. Normal air pressure is 90-120 psi (transmission is disengaged if air pressure drops below 60 psi).
15. ACCESS PLATE. Provides opening for access to oil pump suction line screen, There is an identical plate on the opposite side of the transmission.
16. TRANSMISSION OIL TEMPERATURE SENDING UNIT. Provides electrical signal to temperature gage for indicating transmission oil temperature.

## 2-12. TRANSMISSION AND CONTROLS (Continued).

TA 074560

---

## Section V POWER TRANSFER CASE AND REAR AXLE DIFFERENTIAL LOCKUP

---

---

### 2-13. INTRODUCTION.

---

The power transfer cases on M916 thru M920 trucks provide a means of engaging or disengaging front wheel drive. The instrument panel control for this feature also allows the driver to lock up the rear inter-axle differential so that all differentials on rear axle tandem turn the same speed. (The instrument panel control engages or disengages the front propeller shaft to the front driving axle (M916 thru M920) and the inter-axle differential located in all the forward rear tandem axles.) On M916 and M920 models only, an oil cooler is used to keep the transfer case lubricant within the proper temperature range during warm weather operation. It is disconnected in cold weather to prevent cooler damage (see para 7-9).

The M915 is a 6 x 4, activating the differential lockout control locks the inter-axle differential thereby connecting the transmission to front tandem and rear tandem axles solidly together.

The forward rear tandem axle is equipped with a no-spin differential which automatically locks, eliminating differential action independent of the manual control, at least three wheels on the rear tandem must turn when the inter-axle differential lock is engaged.

---

### 2-14. POWER TRANSFER CASE.

---

1. ENGINE RUN SWITCH. Energizes 12-volt electrical system, including differential lockup indicator circuit,
2. LOCKUP INDICATOR. Illuminates when lockup switch is closed.
3. CIRCUIT BREAKER (CB-6). Protects electrical components of differential lockup circuit by opening when load exceeds 20 amps, Automatically recycles until overload is removed.
4. AIR MANIFOLD. Routes air from reservoir to control valve.
5. CONTROL VALVE. Provides control to engage or disengage front wheel drive on M916 thru M920. When front wheel drive is engaged, air pressure is applied to lockup rear axle differential. When front wheel drive is disengaged, air pressure is vented through lockup valve. On M915, this control locks up the rear differential only.
6. OIL COOLER LINE. Carries cooled oil to top of power transfer case. (M916 and M920 only).
7. OIL COOLER. By means of fresh air flow thru fins and tubing, cools warm oil from power transfer case (M916 and M920 only); suspended under winch platform.
8. OIL COOLER LINE. Brings warm oil from power transfer case to oil cooler (M916 and M920 only).
9. OIL PUMP. Driven from upper shaft of power transfer case, draws warm oil from bottom of case, pumps thru cooler, and returns to top of case (M916 and M920 only).
10. OIL PUMP LINE. Carries warm oil from bottom of case to pump (M916 and M920 only).
11. TEE. Replaces drain plug (plug is reinserted in end of tee; provides connection for line (10). (M916 and M920 only).

**2-14. POWER TRANSFER CASE (Continued).**

12. LOCKUP CHAMBER. When air pressure is applied to the chamber, it mechanically locks the rear axle differential in place so that drive is applied to both rear axles. Without air pressure, the differential applies drive to the axle that offers the least resistance.
13. DRAIN PLUGS. Allow draining oil during service intervals. Has magnetic base to attract foreign particles and warn of unusual wear of internal parts.
14. FILLER PLUGS. Provide means of checking and replenishing oil supply.
15. LOCKUP SWITCH. Normally open; closed by 60 psi air pressure to activate lockup indicator circuit.

TA 074561

## Section VI PUSHER AXLE AND CONTROLS

**2-15. INTRODUCTION.**

A pusher axle is provided on M917, M919, and M920 vehicles.

**2-16. PUSHER AXLE.**

1. PRESSURE REGULATOR VALVE. Allows operators to regulate air pressure to air bags.
2. PRESSURE GAGE. Air-actuated gage indicates pressure in lines to air bags.
3. UP-DOWN SELECTOR VALVE. In DOWN position, directs air pressure to air bags which lower axle. In UP position, directs pressure to air cylinders which raise axle.
4. AIR CYLINDERS. Provide force to raise axle to stowed position.
5. SHOCK ABSORBERS. Stabilize fluctuations in air bags caused by road surface variations.
6. AIR BAGS. Provide force to lower axle to road position.

TA 0745 62

## Section VII FRONT AXLE AND SUSPENSION

### 2-17. INTRODUCTION.

The Model M915 is equipped with a non-driving front axle; the Models M916 thru M920 have a driving front axle. (See power train illustrations in paragraphs 2-4 and 2-5.) Shock absorbers are used only on the Model M915.

### 2-18. NON-DRIVING FRONT AXLE (M915).

1. KNUCKLE AND KINGPIN ASSEMBLY (Shown with drum removed). Movable joint between the wheel and axle I-beam.
2. STEERING ARM. Connects to power steering drag link (see para 2-76).
3. DRUM. Houses the wheel brakes. Serves as mount for front wheels.
4. TIE ROD ASSEMBLY. Connects left and right knuckles for synchronized movement of both wheels.
5. SHOCK ABSORBERS (M915). Supplement spring and stabilize spring fluctuations caused by road surface variations.
6. LEAF SPRINGS. Absorb and minimize the amount of road shock transmitted to the vehicle frame.
7. SHACKLE. Swinging support that permits the leaf spring to vary in length as it is deflected.
8. BRAKE AIR CHAMBER. When pressure is supplied to the chambers from the air system, they mechanically activate the brake mechanism.

TA 074563

**2-19. DRIVING FRONT AXLE (M916 THRU M920).**

**NOTE**

See illustration in para 2-18 for identification and description of common components.

1. BREATHER. Allows fumes from hot oil to escape.
2. CARRIER. Houses differential drive and driven gears.
3. PINION YOKE. Attaches to transfer case propeller shaft universal. (See illustration in para 2-5.)
4. DRAIN PLUG. Allows draining oil at service intervals.
5. FILLER PLUG. Provides access for checking oil level and replenishing oil supply.

TA 074564

---

## Section VIII REAR AXLE

---

---

### 2-20. INTRODUCTION.

---

Two similar rear axle assemblies are used in the M915 thru M920 vehicles. The Model M915 uses one type; the Models M916 thru M920 use a different assembly. (Specifications for both axles are given in para 1-11.)

### 2-21. REAR AXLE (M915).

1. HUB AND DRUM ASSEMBLY. Serves as mount for rear wheels. Houses the brake shoe assemblies which can be mechanically forced against it to slow or stop the vehicle.
2. AXLE SHAFT. Transmits power from the differential gear assembly to the hub assembly inside of axle housing.
3. INTER-AXLE PROPELLER SHAFT. Transmits power to rear axle.
4. DIFFERENTIAL LOCKUP CHAMBER. Air actuated by lockup switch located in cab interior. (Refer to para 2-14 for description.)
5. BRAKE AIR CHAMBER. (Refer to para 2-64 for description.)
6. PINION YOKE. Connects to propeller shaft from transmission.
7. OIL FILTER. Oil filter (under cover) removes impurities from oil in forward rear axle. Filter is replaceable, automobile-type unit (Refer to LO 9-2320-273-12.)
8. DRAIN PLUG. Allows draining oil at service intervals.
9. FILLER PLUG. Used to inspect oil level and replenish oil supply.
10. BREATHER. Allows fumes from hot oil to escape.

TA 074565

---

**2-22. REAR AXLE (M916 THRU M920).**

---

**NOTE**

See illustration in paragraph 2-21 for identification and description of common components. For organizational maintenance purposes, the basic difference between the axles shown in paragraphs 2-21 and 2-22 is that the axle shown below does not have an oil filter. Quantity and placement of fill and drain plugs also differ from one configuration to the other.

1. AXLE SHAFT. Transmits power from the differential gear assembly to the hub assembly inside of axle housing.
2. HUB AND DRUM ASSEMBLY. Serves as mount for rear wheels. Houses the brake shoe assemblies which can be mechanically forced against it to slow or stop the vehicle.
3. FILLER PLUG. A plug used to gain access for inspecting oil level and replenishing oil supply.
4. INTER-AXLE PROPELLER SHAFT. Transmits power for forward-rear to rear-rear axle.
5. DIFFERENTIAL LOCKUP CHAMBER. Air actuated by lockup switch located in cab interior. (Refer to para 2-14 for description.)
6. BRAKE AIR CHAMBER. (Refer to para 2-64 for description.)
7. PINION YOKE. Connects to propeller shaft from power transfer case.
8. DIFFERENTIAL INTERNAL LUBRICATION PUMP. Circulates gear lubricant under pressure thru differential gears.
9. DRAIN PLUG. A magnetic plug which allows draining oil at service intervals. Also, draws metallic particles from the oil.
10. BREATHER. Allows fumes from hot oil to escape.

TA 074566

---

## Section IX FUEL AND AIR INTAKE SYSTEM

---

### 2-23. INTRODUCTION.

This system is comprised of two basic subsystems: fuel delivery and air intake. The systems are identical in all M915 thru M920 vehicles.

## **2-24. FUEL DELIVERY.**

1. FUEL GAGE. Needle actuated by electrical signal from sending unit which shows level of fuel in tank.
2. ENGINE RUN SWITCH. Energizes 12-volt electrical system, including circuits to solenoid shutoff valve and fuel level sending unit.
3. CIRCUIT BREAKER (CB-6). Protects electrical components of fuel system by opening circuit when load exceeds 20 amps. Automatically recycles until overload is removed.
4. PUSH TUBE. Transmits motion from cam follower to rocker arm assembly.
5. INJECTOR. Cam timed to meter and inject fuel into each cylinder.
6. ROCKER ARM. Transmits directional movement from push tube to injector.
7. FUEL DELIVERY LINE. Carries fuel under pressure from fuel pump to fuel manifold.
8. BYPASS LINE. Carries excess fuel from manifold back to tank.
9. CAMSHAFT. Determines valve and injector timing.
10. TANK. 118-gallon (446.63 liters) capacity (110-gallon (416.35 liters) draw).
11. FUEL LEVEL SENDING UNIT. Provides electrical signal to fuel gage for indicating fuel quantity in tank.
12. CAM FOLLOWER. Mechanical lever transmits cam lobe movement from cam shaft to push tube.
13. FILTER. Throwaway filter removes impurities from fuel. Petcock in bottom allows operator to drain off water filtered from fuel.
14. SOLENOID SHUTOFF VALVE. Normally closed, shutting off fuel supply to engine. Open when engine run switch is ON.
15. SCREEN FILTER. Located in fuel pump. Provides additional filtration for fuel prior to entering engine.
16. MANUAL OVERRIDE FOR FUEL SHUTOFF SOLENOID. Normally closed, can be screwed open to allow operation of engine when solenoid is not working.
17. FUEL PUMP. Gear driven from compressor drive. Built-in governor meters fuel through screen filter, solenoid shutoff valve, and into injectors. Excess fuel from pump is returned to the tank, The tachometer drive is located on the pump housing.
18. AIR ACTUATING LINE. Carries pressurized air from intake manifold to fuel pump. Pressure from line opens valve in pump and allows full fuel flow.

2-24. FUEL DELIVERY (Continued).

TA 074567

## 2-25. AIR INTAKE.

1. AIR RESTRICTION INDICATOR. Mounted on instrument panel. A red signal shows on indicator housing when air cleaner needs servicing. A tube connects the indicator to the air cleaner outlet. When air flow through the cleaner is restricted, the red signal becomes visible. The unit is factory set to signal at a specific filter restriction. Resetting is accomplished by pushing a button which is recessed in the bottom.
2. CROSSOVER TUBE. Directs compressed air from turbocharger, through aftercooler, to intake manifold.
3. AFTER COOLER. Cools air entering intake manifold from turbocharger. Water flow from engine cooling system absorbs heat. (See illustration of cooling system in paragraph 2-32.)
4. ENGINE INTAKE MANIFOLD. Directs compressed air charge to each cylinder after it has been cooled by aftercooler.
5. PLENUM. Directs outside air to the air intake tube.
6. AIR INTAKE TUBE. Draws outside air through grille mounted plenum and into air cleaner.
7. INLET TUBE. Directs air from air cleaner to turbocharger.
8. TURBOCHARGER. Driven by exhaust gases (para 2-30). Compresses air in the intake manifold to increase engine power.
9. AIR CLEANER. Mounted on fire wall. Removes impurities from air entering turbocharger. Has replaceable dry, two-stage element.

TA 074568

---

**Section X ENGINE OIL SYSTEM**

---

**2-20. INTRODUCTION.**

The engine oil system is identical on all M915 thru M920 vehicles. The system provides lubricating oil for moving internal engine parts and the turbocharger. In addition, engine oil is used by the Jacobs® brake (engine retarder).

## 2-27. COMPONENTS AND PIPING ARRANGEMENT.

1. OIL BYPASS FILTER. Provides additional filtration, allowing a longer period between oil changes. Oil from pump circulates through the filter, then to the sump.
2. OIL PUMP. Circulates oil through engine to provide cooling and lubrication.
3. DRAINCOCK. Provide passage for draining oil.
4. FLATWASHER. Provides seal between draincock and oil bypass filter.

TA 237211 ■

**2-27. COMPONENTS AND PIPING ARRANGEMENT (Continued).**

3. BREATHER TUBE. Allow fumes from hot oil to escape.
4. OIL FILLER. Located in engine cover. Used for replenishing engine oil supply.
5. OIL COOLER. Coolant circulates through internal tubes of oil cooler and carries away heat from engine oil.
6. PRIMARY OIL FILTER. Throwaway filter removes dirt and foreign particles from oil.
7. DIPSTICK. Engine oil level indicator.
8. DRAIN PLUG. Located in bottom of engine oil pan, Used to drain oil from engine.
9. OIL RETURN LINE. Carries return oil from turbocharger to engine block.
10. OIL SUPPLY LINE. Carries oil under pressure to cool and lubricate turbocharger.

TA 074570

**2-28. OIL MONITORING SYSTEM.**

1. ENGINE RUN SWITCH. Energizes 12-volt electrical system, including oil pressure gage and warning light circuits.
2. OIL PRESSURE GAGE. Needle activated by electrical signal from oil pressure sending unit indicates engine oil pressure.
3. OIL WARNING LIGHT. Indicator light is activated by 12-volt power from pressure switch when engine oil pressure drops below 5 psi (34 kPa).
4. CIRCUIT BREAKER (CB-6). Protects electrical components of oil system by opening circuit when load exceeds 20 amps. Automatically recycles until overload is removed.
5. PRESSURE SWITCH. Closes when oil pressure drops below 5 psi (34 kPa) and supplies 12-volt power to oil warning indicator.
6. OIL PRESSURE SENDING UNIT. Provides electrical signal to oil pressure gage to indicate oil pressure.

TA 074571

---

**Section XI EXHAUST SYSTEM**

---

**2-29. INTRODUCTION.**

The exhaust system is identical in all M915 thru M920 vehicles, except for minor variations in arrangement.

### **2-30. EXHAUST SYSTEM.**

1. RAIN CAP. Prevents entry of rain and dirt into exhaust pipes when engine is not in use.
2. EXHAUST MANIFOLD. Bolted to exhaust ports on cylinder heads. Collects exhaust from ports and directs it to turbocharger.
3. TURBOCHARGER. See illustration and description in paragraph 2-25.
4. TURBO OUTLET PIPE. Carries hot exhaust away from turbocharger.
5. FLEX PIPE(S). Connect turbo outlet pipe, muffler inlet pipe, and muffler. Pipes are flexible to allow for vibrations and expansion in system.
6. MUFFLER INLET PIPE. Connects flex pipes.
7. MUFFLER. Directs exhaust through baffles to deaden noise.
8. EXHAUST STACK. Directs exhaust from muffler.

## 2-30. EXHAUST SYSTEM (Continued).

TA 074572

---

**Section XII COOLING SYSTEM**

---

---

**2-31. INTRODUCTION.**

---

The cooling system is identical in all M915 thru M920 vehicles. The system provides coolant for the engine block, oil cooler, aftercooler, fuel injectors, and air compressor.

---

**2-32. COMPONENTS AND PIPING ARRANGEMENT.**

---

1. THERMOSTAT DEAERATION LINE. Escape route for air trapped in radiator top or thermostat housing.
2. RADIATOR INLET HOSE. Channels hot coolant into radiator when thermostat is open.
3. ENGINE SHUNT LINE. Allow air bubbles from coolant in pump to escape into radiator, to prevent pump cavitation.
4. RADIATOR CAP. Closes off filler opening and keeps system under pressure up to a maximum of 10 psi.
5. RADIATOR. Coolant is circulated through a series of fins and baffles so that outside air flow can dissipate heat.
6. OIL COOLER. Engine coolant circulates through internal tubes of cooler and carries away heat from engine.
7. AFTERCOOLER. Coolant flowing through core cools hot air entering intake manifold ports from turbocharger.
8. WATER LINE. Carries water under pressure from block to aftercooler.
9. WATER LINE. Carries hot water from air compressor to thermostat housing.
10. WATER LINE. Carries coolant from water pump to air compressor.
11. ACCESSORY DRIVE. Powers the fan and water pump.
12. FAN. Forces air through radiator to control coolant temperature.
13. FAN CLUTCH. Air pressure from actuator engages fan when coolant temperature rises above 190°F (88°C).
14. THERMOSTAT. Shuts off coolant flow to radiator until temperature reaches 185°F (85°C). Coolant is then directed through radiator inlet hose to the radiator.
15. FAN CLUTCH ACTUATOR. When coolant temperature rises above 190°F (88°C), actuator directs compressed air into fan clutch causing fan to engage.
16. WATER MANIFOLD. Collects coolant from cylinder heads and directs it to thermostat housing.

## 2-32. COMPONENTS AND PIPING ARRANGEMENT (Continued).

TA 074573

**2-33. COOLANT TEMPERATURE MONITORING SYSTEM.**

1. WATER TEMPERATURE GAGE. Shows coolant temperature actuated by electrical signal from water temperature sending unit.
2. ENGINE RUN SWITCH. Energizes 12-volt electrical system, including temperature gage and temperature indicator light circuits.
3. ENGINE COOLANT TEMPERATURE WARNING LIGHT. Activated by 12-volt power from water temperature switch when engine temperature exceeds 225°F (107°C).
4. CIRCUIT BREAKER (CB-6). Protects electrical components and wiring of coolant system by opening circuit when load exceeds 20 amps. Automatically recycles until overload is removed.
5. WATER TEMPERATURE SWITCH. Normally open, closes to activate indicator light when coolant temperature exceeds 225°F (107°C).
6. WATER TEMPERATURE SENDING UNIT. Provides electrical signal to temperature gage.

TA 073922

---

**Section XIII RELAYS, CIRCUIT BREAKERS, AND WIRE IDENTIFICATION**

---

---

**2-34. INTRODUCTION.**

---

- a. The electrical relays are identical in all M915 thru M920 vehicles, except for minor variations in arrangement. The M917, M918, and M919 use two relays, the M915 use seven relays; while the M916 and M920 use eight.
- b. The circuit breakers are identical in the M915 thru M920 vehicles, except for minor variations in arrangement. The M917, M918, and M919 use six circuit breakers to protect their electrical systems, the M915 uses eight; while the M916 and M920 use nine. These circuit breakers are rated at 20 amps continuous load. If an overload does occur, the circuit breaker automatically recycles (opens and closes) until the overload is removed.

## 2-35. RELAYS AND CIRCUIT BREAKERS.

1. RELAY (K1). (M915 thru M920) Normally open contacts: Provides 12-volt power to the electric horn when energized.
2. RELAY (K2). (M915, M916, and M920) Normally open contacts: Provides 24-volt power to trailer left turn signal light when energized.  
RELAY (K2). (M918 and M919) Normally closed contacts: Provides 12-volt power to the backup alarm when energized.  
RELAY (K2). (M917) Normally closed contacts: Disconnects 12-volt power from tractor backup lights when the Operation switch is in BLACKOUT position,
3. RELAY (K3). (M915, M916, and M920) Normally open contacts: Provides 24-volt power to trailer right turn signal light when energized.
4. RELAY (K4). (M915, M916, and M920) Normally open contacts: Provides 24-volt power to trailer blackout stop lights when energized.
5. RELAY (K5). (M915, M916, and M920) Normally open contacts: Provides 24-volt power to trailer blackout tail lights when energized.
6. RELAY (K6). (M915, M916, and M920) Normally open contacts: Provides 24-volt power to trailer marker and tail lights when energized.
7. RELAY (K7). (M915, M916, and M920) Normally closed contacts: Disconnects 12-volt power from tractor backup lights when operation switch is in BLACKOUT position.
8. RELAY (K8). (M916 and M920) Normally closed contacts: Provides 12-volt power to work lamps when WORK LAMPS switch is ON.
9. ENGINE TEMPERATURE DIODE. Provides a circuit to illuminate engine temperature indicator when engine is cranking, and prevents engagement of the starter by feedback voltage in the event the water temperature switch closes.
10. CIRCUIT BREAKER (CB-9). Protects the 12-volt work lamps circuit in the M916 and M920 vehicles.
11. CIRCUIT BREAKER (CB-8). Protects the 24-volt blackout stop, marker, and tail light circuits for trailers used with the M915, M916, and M920 vehicles.
12. CIRCUIT BREAKER (CB-7). Protects the 24-volt left and right turn signals and blackout tail light circuits for trailers used with the M915, M916, and M920 vehicles.
13. CIRCUIT BREAKER (CB-6). Protects the 12-volt engine retarder brake, instrument gages, low air, park brake, and differential lockout circuits in the M915 thru M920 vehicles.
14. CIRCUIT BREAKER (CB-5). Protects the 12-volt backup lights and ether start circuits in the M915 thru M920 vehicles.
15. CIRCUIT BREAKER (CB4). Protects the 12-volt heater fan motor circuit in the M915 thru M920 vehicles.
16. CIRCUIT BREAKER (CB-3). Protects the 12-volt cigar lighter and dome light circuits in the M915 thru M920 vehicles.  
CIRCUIT BREAKER (CB-3). Protects the 12-volt utility outlets on the M915, M916, and M920 vehicles.

**2-35. RELAYS AND CIRCUIT BREAKERS (Continued).**

17. CIRCUIT BREAKER (CB-2). Protects the 12-volt electric horn and turn signal flasher circuits in the M915 thru M920 vehicles.
18. CIRCUIT BREAKER (CB-1). Protects the 12-volt stop light, operation switch, turn signal, and instrument lighting circuits in the M915 thru M920 vehicles.

---

## **2-36. WIRE IDENTIFICATION.**

---

The electrical wiring on the M915 thru M920 vehicles is contained in braided or loomed harness assemblies. The wires are permanently hot-stamped with individual circuit numbers. The circuit numbers appear two inches from each termination end and every six inches throughout the length. Refer to Appendix D for wiring harness drawings and electrical system diagrams, for circuit numbers and terminations.

---

Section XIV STARTING AND STARTING CONTROL SYSTEM

---

---

2-37. INTRODUCTION.

---

The starting and starting control system is identical in all M915 thru M920 vehicles.

## 2-38. STARTING AND STARTING CONTROL SYSTEM.

1. ENGINE RUN SWITCH. Directly controls fuel solenoid shutoff valve and allows remainder of starting circuit to be placed into operation when the start button is depressed.
2. ENGINE START BUTTON. Activates starting circuit by energizing the starter relay.
3. STARTER RELAY. With ENGINE RUN switch on, transmission ratio selector lever in neutral, and ENGINE START button depressed, the relay energizes and closes the starter solenoid circuit.
4. NEUTRAL SAFETY SWITCH. Switch is normally open. Starting circuit cannot be activated when ratio selector lever is in any position other than neutral.
5. STARTER SOLENOID. 12-volt power is applied to the starter solenoid when starter relay is energized. The solenoid closes and supplies 24-volt power, which energizes the starter motor.
6. STARTER MOTOR. When energized, the motor engages the flywheel to start the engine.
7. FUEL SOLENOID SHUTOFF VALVE. When the ENGINE RUN switch is turned on, valve is energized and opens to allow fuel to pass to the injectors. (See paragraph 2-24 for description of fuel system.)

## 2-38. STARTING AND STARTING CONTROL SYSTEM (Continued).

TA 073921

---

**Section XV ETHER QUICK-START**

---

---

**2-39. INTRODUCTION.**

---

The quick-start system is identical in all M915 thru M920 vehicles.

---

**2-40. ETHER QUICK-START.**

---

1. ENGINE RUN SWITCH. Energizes 12-volt electrical system, including quick-start solenoid valve circuit.
2. ETHER BUTTON. Activates solenoid valve. Will not work if thermal switch is open.
3. CIRCUIT BREAKER (CB-5). Protects electrical components and wiring of quick-start system by opening circuit when load exceeds 20 amps. Automatically recycles until overload is removed.
4. THERMAL SWITCH. Opens when coolant temperature is above 50°F (10°C), and prevents solenoid valve from activating.
5. ETHER CYLINDER. Replaceable 18-02 (710 cc) ether container.
6. ETHER TUBE. Carries ether from solenoid valve thru atomizer to engine air intake manifold.
7. ATOMIZER. Sprays fine ether mist into intake manifold.
8. SOLENOID VALVE. Controls release of ether from cylinder. When solenoid is energized, ether flows to atomizer.

## 2-40. ETHER QUICK-START (Continued).

**Section XVI BATTERIES AND POWER GENERATING SYSTEM**

---

---

**2-41. INTRODUCTION.**

---

The battery and generating system provides 12- and 24-volt power to electrical systems in M915 thru M920 vehicles. The power generating system is identical for all vehicles.

**2-42. BATTERIES AND POWER GENERATING SYSTEM.**

1. ENGINE RUN SWITCH. Supplies 12-volt power from batteries through switch, circuit breaker, to voltmeter.
2. VOLTMETER. 10- to 16-volt gage indicates voltage provided by battery pack, and alternator.
3. CIRCUIT BREAKER (CB-6). Protects electrical components of volt meter circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
4. BATTERY PACK. Comprised of four 12-volt, maintenance-free batteries. Two batteries wired in parallel in each set. Each set connected in series for 24-volt output. Battery pack is used for both 12- and 24-volt output.
5. AC GENERATOR (ALTERNATOR). Generates voltage for recharging battery pack. Has external 24-volt transformer rectifier.

---

## Section XVII SERVICE LIGHTING SYSTEM

---

### **2-43. INTRODUCTION.**

The service lighting system provides illumination required while operating the vehicles. This system is comprised of the following subsystems:

- a. Headlamps and Tail Lamps (para 2-44).
- b. Marker and Clearance Lamps (para 2-45),
- c. Turn Signals and Hazard Warning Lamps (para 2-46).
- d. Backup Lamps (para 2-47).
- e. Work Lamps (para 2-48).
- f. Instrument and Cab Dome Lamps (para 2-49).
- g. Stop Lamps (See brake switches and indicators (para 2-63)).

Individual circuit descriptions, except stop lamps, follow in this section. You can find a complete electrical schematic diagram and wiring harness diagrams in Appendix D.

### **2-44. HEADLAMPS AND TAIL LAMPS.**

When headlamp switch is on, and operation lamp switch is in NORMAL, battery power is supplied to illuminate the headlamps and tail lamps as well as the trailer tail lamps on the M915, M916, M917, and M920. The trailer tail lamps are powered through tractor chassis receptacles.

1. HEADLAMPS. Each assembly has two filaments in a sealed unit, a high beam and a low beam. Selection of high or low beam is controlled by the dimmer switch.
2. RELAY (K6). Normally open contacts; energized by 12-volt power from operation lamp switch when in NORMAL and headlamp switch is in on position. When relay is closed, 24-volt power is applied to trailer tail lamps, through circuit breaker and tractor receptacles.
3. CIRCUIT BREAKER (CB-8). Protects electrical components of 24-volt relay circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
4. OPERATION LAMP SWITCH. Two-position safety switch for NORMAL and BLACKOUT modes of operation. To select mode, switch is pulled out and placed to either position. Set to NORMAL, 12-volt power from the lamp switch passes through operation lamp switch contacts to energize; tail lamps, headlamps (through dimmer switch), and coil of relay. Set to BLACKOUT, 12-volt power is removed from regular service lamps, electric horn, and backup alarm, while 12-volt power from the lamp switch is supplied through the switch to blackout tail lamps, marker lamps, and headlamp.
5. TAIL LAMPS. Each assembly contains two bulbs: A double-element bulb provides tail lamp, turn signal lamp, and stop lamp. A separate bulb is used for the backup lamp. The tail lamp circuit is energized through the operation lamp switch when headlamp switch is in either ON position. (The circuits for turn signals, stop lamps, and backup lamps are described in paragraph 2-46 and 2-47).

2-44. HEADLAMPS AND TAIL LAMPS (Continued).

TA 074576

**2-44. HEADLAMPS AND TAIL LAMPS (Continued).**

6. 24-VOLT TRAILER RECEPTACLE (M915, M916, M917, and M920). Tractor chassis mounted 12-pin connector to provide power to lunette-towed vehicles. (This receptacle is 12-volts on the M917).
7. HIGH-BEAM INDICATOR. When power is supplied to each high-beam filament in the headlamps, the high-beam indicator is illuminated via the same circuit.
8. DIMMER SWITCH. Two-position, floor-mounted switch. The switch is always closed in one of two positions to energize either the low-beam or high-beam filament.
9. HEADLAMP SWITCH. Three-position with one OFF position and two ON positions, When the switch is pulled out to the second detented ON position, 12-volt power is supplied to the lighting systems through operation lamp switch. (The first detented position on the switch energizes the circuit for tail lamps, but not the headlamps.) The switch has an integral circuit breaker that opens to protect the complete circuit in the event of a "short" or faulty wiring. The circuit breaker is a recycling type; that is, it opens when the circuit is overloaded and cycles until the fault is removed.
10. 24-VOLT TRAILER RECEPTACLE (M915, M916, and M920). Tractor chassis mounted 12-pin connector, provides 24 volts to trailer for lighting and tail lamps.
11. 12-VOLT TRAILER RECEPTACLE (M915, M916, and M920. Tractor mounted seven-pin connector provides 12 volts to trailer for lighting.

## 2-44. HEADLAMPS AND TAIL LAMPS (Continued).

TA 074577

**2-45. MARKER AND CLEARANCE LAMPS.**

When headlamp switch is in either ON position, the operation lamp switch is in NORMAL position, 12-volt power is supplied to illuminate clearance lamps and front marker lamps as well as the trailer marker lamps on M915, M916, M917, and M920 vehicles. The trailer marker lamps receive power through receptacles mounted on the tractor chassis.

1. MARKER LAMP ASSEMBLY. Each assembly has two bulbs that illuminate whenever headlamp switch is ON and operation lamp switch is in NORMAL. One bulb is used as a marker lamp, and the other is for turn signals (para 2-46).
2. RELAY (K6). Normally open contacts; 12-volt power energizes relay when operation light switch is in NORMAL and headlamp switch is ON. When contacts of relay close, 24 volts from circuit breaker CB-8 is supplied to tractor chassis receptacles.
3. CIRCUIT BREAKER (CB-8). Protects electrical components for 24-volt tractor receptacle circuits by opening when load exceeds 20 amps, Automatically recycles until overload is removed.
4. 24-VOLT TRAILER RECEPTACLE (M915, M916, M917, and M920). 12-pin connector for 24-volt power used for lunette-towed vehicles. (This receptacle is 12-volts on the M917).
5. OPERATION LAMP SWITCH. With the switch set to NORMAL and the headlamp switch ON, 12-volt power is supplied to marker lamps, clearance lamps, and 12-volt tractor receptacle.
6. CLEARANCE LAMP SWITCH. Provides the capability of flashing the clearance lamps on the cab and the 12 volt supplied to the tractor receptacle, when switch is depressed and released. 12-volt power is supplied to the switch when headlamp switch is ON and operation switch is in NORMAL.
7. HEAD LAMP SWITCH. Supplies 12-volt power, when in either ON position, through operation lamp switch in NORMAL, to clearance lamps, marker lamps, and 12-volt tractor receptacle.
8. 24-VOLT TRAILER RECEPTACLE (M915, M916, and M920). 12-pin connector containing 24-volt circuit for trailer marker lamps.
9. 12-VOLT TRAILER RECEPTACLE (M915, M916, and M920). Seven-pin connector containing 12-volt circuit for trailer clearance and marker lamps.
10. CLEARANCE LAMPS. Each unit has a replaceable single-element bulb that illuminates when headlight switch is in either ON position, and operation lamp switch is in NORMAL. The clearance lamps will flash when clearance lamp switch is depressed and released.

**2-45. MARKER AND CLEARANCE LAMPS (Continued).**

TA 074578

**2-46. TURN SIGNAL AND HAZARD WARNING LAMPS.**

When the operation lamp switch is in NORMAL position, battery power is applied to the turn signal control to illuminate right or left: front turn signals, rear turn signals as well as trailer turn signals on M915, M916, M917, and M920 vehicles through tractor-mounted receptacles. Also, the turn signal control contains a hazard warning switch, that allows the operator to flash all lamps in the turn signal system simultaneously.

1. MARKER AND TURN SIGNAL LAMP ASSEMBLY. Each assembly has a replaceable single filament bulb that flashes when turn signal control or hazard warning switch is on.
2. RELAY (K2). Normally open contacts; closed by 12 volts from left turn signal control or hazard warning switch. When relay is energized, 24 volts is applied to tractor mounted receptacles for trailer left turn signals.
3. RELAY (K3). Normally open contacts; closed by 12 volts from right turn signal control or hazard warning switch. When relay is energized, 24 volts are applied to tractor mounted receptacles for trailer right turn signals.
4. CIRCUIT BREAKER (CB-2). Protects electrical components of flasher, turn signal control, and hazard warning switch circuits by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
5. CIRCUIT BREAKER (CB-7). Protects electrical components of 24-volt relay and circuits by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
6. OPERATION LAMP SWITCH. Two-position switch for normal and blackout modes of operation. When set to NORMAL, 12-volt battery power from circuit breaker (CB-2) passes through switch contacts to turn signal control, flasher unit, and hazard warning switch.
7. REAR TAIL LAMPS. Each assembly contains two bulbs; the tail lamp turn signal and stop lamp circuits all use the same bulb. When either the turn signal control or hazard warning switch are on, the turn signal and stop lamp filaments flash. When the turn signal control is activated, only the bulb on the side selected flashes. If the brakes are engaged at the same time that the hazard warning switch is on, both bulbs flash. When the brakes are engaged and the turn signal control is activated, one bulb will flash and the other bulbs will remain on constantly.
8. 24-VOLT TRAILER RECEPTACLE (M915, M916, M917, and M920). Tractor mounted 12-pin connector provides 24 volts power to lunette-towed vehicles. This receptacle is 12-volts on the M917.
9. FLASHER UNIT. This unit receives 12-volt power from operation lamp switch in NORMAL position and supplies this power alternately on and off to turn signal control or hazard warning switch when either one is engaged.
10. HAZARD WARNING SWITCH. When this switch is engaged, it receives 12-volt power from the operation lamp switch and energizes all components in the turn signal circuits simultaneously.
11. TURN SIGNAL CONTROL. When this control is engaged, it receives 12-volt power from flasher unit. (The flasher unit receives 12-volt power through operation lamp switch and circuit breaker CB-2.) Power is then supplied to:
  - a. Front left or right turn signals.
  - b. Rear left or right turn signals.
  - c. 12-volt Trailer Receptacle.
  - d. Relays K2 and K3 (To energize relay and supply power to both tractor mounted 24-volt receptacles for trailer turn signals.)

## 2-46. TURN SIGNAL AND HAZARD WARNING LAMPS (Continued).

12. INDICATOR LAMPS. Three bulbs to indicate left turn (green), right turn (green), or hazard (red). The bulbs are energized, by selection, with 12-volt power from the flasher unit.
13. 12-VOLT TRAILER RECEPTACLE (M915, M916, and M920). Tractor mounted seven-pin connector provides 12-volt power to the trailer turn signal lamps.
14. 24-VOLT TRAILER Receptacle (M915, M916, and M920). Tractor mounted 12-pin connector provides 24-volts power to the trailer turn signal lamps.

TA 074579

**2-47. BACKUP LAMPS.**

When the operator places the gear ratio selector lever in reverse position (R1 or R2), air pressure within the transmission closes backup switch. When operation lamp switch in NORMAL position and engine run switch ON, the circuit is energized to illuminate each backup bulb in tail lamp assembly.

1. **BACKUP SWITCH.** The switch is normally open. When closed, it receives 12-volt battery power through circuit breaker CB-5 and supplies power through normally closed contacts of relay K7 to energize backup lamps in tail lamp assemblies.
2. **RELAY (K7).** The relay is normally closed. When the operation lamp switch is placed to BLACKOUT position, 12-volt power is supplied to coil of K7, energizing the relay, and opens the contacts. This prevents the backup lamps from coming on whenever the operation lamp switch is in BLACKOUT mode.
3. **CIRCUIT BREAKER (CB-5).** Protects electrical components of backup switch circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
4. **CIRCUIT BRAKER (CB-2).** Protects electrical components of relay K7 circuits by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
5. **TAIL LAMP.** Each assembly contains two bulbs: A tail, turn signal, and stop lamp bulb which contain two filaments and backup bulb which contains one filament. When the backup switch closes, the backup lamp illuminates.
6. **OPERATION LAMP SWITCH.** Two-position switch for NORMAL AND BLACKOUT modes of operation. In this circuit, the switch is used to prevent operation of the backup lamp. In BLACKOUT position, 12-volt power from circuit breaker CB-2 passes through the switch and energizes coil of relay K7, thus preventing the backup lamps from possibly coming on.
7. **ENGINE RUN SWITCH.** This switch controls 12-volt power to the backup switch through circuit breaker CB-5. When the switch is off the backup lamp circuit is de-energized.

## 2-47. BACKUP LAMPS (Continued).

TA 074580

**2-48. WORK LAMPS (M916 AND M920).**

When the operation switch is in NORMAL position, and the operator places the work lamps switch to ON, 12-volt power is supplied to the work lamps on the M916 and M920 vehicles.

1. WORK LAMPS. Each assembly contains a single filament sealed beam unit. When the operation switch is in NORMAL and the work lamps switch is ON, the work lamps come on.
2. WORK LAMPS SWITCH. Two-position switch for ON and OFF mode of operation. When the switch is ON, 12-volt power is supplied through CB-2, normally closed contacts of relay K8, to the work lamps.
3. RELAY (K8). The relay is normally closed. When the operation switch is placed to BLACK-OUT, 12-volt power is supplied to coil of K8, energizing the relay, and opens the contacts. This prevents the work lamps from coming on whenever the operation switch is in the BLACKOUT mode.
4. CIRCUIT BREAKER (CB-9), Protects electrical components of work lamps circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
5. CIRCUIT BREAKER (CB-2). Protects electrical components of relay K8 circuits by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
6. OPERATION SWITCH. Two-position switch for NORMAL and BLACKOUT modes of operation. In this circuit, the switch is used to prevent operation of the work lamps. In BLACKOUT position, 12-volt power from circuit breaker CB-2 passes through the switch and energizes coil of relay K8, thus preventing the work lamps from being turned on.

TA 074581

This page intentionally left blank.

## 2-49. INSTRUMENT AND CAB DOME LAMPS.

- a. With the headlamp switch in either ON position, the instrument lamps illuminate. The dome lamp illuminates whenever the dome lamp switch is ON.
  - b. The low air pressure warning lamp on left-hand cluster, clearance lamp on center cluster and six indicator lamps on the right-hand cluster are described with their respective circuits in this chapter. That is, the high engine temperature warning indicator is described with the cooling system; low oil pressure warning indicator with the oil system, etc., (see table of contents).
1. LEFT HAND INSTRUMENT CLUSTER. The instrument gage lamps on this panel receive 12-volt power from headlamp switch when it is in either ON position. Each gage contains its own illumination bulb.
2. CENTER INSTRUMENT CLUSTER. The center cluster contains the tachograph which is illuminated when the headlamp switch is in either ON position.
3. HEADLAMP SWITCH. Three-position switch with one OFF position and two ON positions. In either ON position, 12-volt battery power passes through the switch to energize the following lamp in this circuit:
  - a. Instrument lamps on left-hand instrument cluster.
  - b. Clearance switch and tachograph illumination lamps on center cluster.
  - c. Switch and functional indicators on right-hand instrument cluster.
  - d. Illumination lamps on heater panel.
  - e. Illumination lamps on ratio selector.

The headlamp switch has a variable rheostat that allows the operator to adjust the brightness of all lamps in this circuit by turning the switch knob.

4. RIGHT-HAND INSTRUMENT CLUSTER. The instrument lamps on this cluster receive 12-volt power from the headlamp switch and illuminate the windshield wiper, and windshield washer indicator.
5. CIRCUIT BREAKER (CB-3). Protects electrical components of dome lamp circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
6. DOME LAMP AND SWITCH ASSEMBLY. When the assembly integral switch is ON, the lamp is energized by 12-volt battery power through circuit breaker (CB-3).
7. HEATER PANEL LAMPS. When the headlamp switch is in either ON position, the lamps are energized by 12-volt battery power and illuminates the heater control panel.
8. GEAR RATIO SELECTOR LAMP. When the headlamp switch is in either ON position, the lamp is energized by 12-volt battery power and illuminates the gear ratio selector.

**2-49. INSTRUMENT AND CAB DOME LAMPS (Continued).**

---

**Section XVIII BLACKOUT LIGHTING SYSTEM**

---

**2-50. INTRODUCTION.**

The blackout lighting system prevents operation of the horn, backup alarm, and all service lighting (para 2-43), except instrument lamps, and dome lamp. The system provides the following intensity lighting for blackout operation on all M915 series vehicles:

- a. One headlamp.
- b. Two front marker lamps.
- c. Two tail and stop lamps.
- d. Trailer tail, stop, and marker lamps on M915, M916, M917, and M920 at the 12-pin trailer receptacles.

**2-51. BLACKOUT LIGHTING SYSTEM.****NOTE**

In reading the following component description you should remember that the OPERATION switch is in BLACKOUT position.

1. BLACKOUT HEADLAMP. The lamp consists of a single, replaceable sealed beam unit. With the headlamp switch in the ON position, the blackout headlamp is energized by a 12-volt battery power.
2. BLACKOUT MARKER LAMPS. Each lamp consists of a replaceable bulb which is energized by 12-volt battery power when the headlamp switch is in either ON position.
3. CIRCUIT BREAKER (CB-8). Protects electrical components for 24-volt blackout stop lamp relay circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
4. RELAY (K5). Normally open contacts: Closed by 12-volt power when the operation switch is in BLACKOUT. When relay is energized, 24-volt power is supplied from circuit breaker CB-7 through 24-volt trailer receptacle for blackout tail lamps.
5. CIRCUIT BREAKER (C B-7). Protects electrical components for 24-volt blackout tail lamp relay circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
6. RELAY (K4). Normally open contacts: Closed by 12-volt power when the operation switch is in BLACKOUT. When relay is energized, 24-volt power is supplied from circuit breaker CB-8 through 24-volt trailer receptacle.
7. CIRCUIT BREAKER (CB-1). Protects electrical components for stop switch circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
8. 24-VOLT TRAILER RECEPTACLE (M915, M916, M917, and M920). Tractor mounted 12-pin connector to provide 24-volt battery power to lunette - towed trailers for blackout tail and stop lamps. This receptacle is 12-volts on M917.

**2-51. BLACKOUT LIGHTING SYSTEM (Continued).**

9. REAR BLACKOUT LAMPS. Contains the bulbs for blackout tail and stop lamps. The blackout tail lamp is energized when the operation switch is in BLACKOUT and the headlamp switch is in either ON position. The stop lamps are energized when the stop lamp switch is actuated.
10. OPERATION LAMP SWITCH. Two-position switch for NORMAL and BLACKOUT modes of operation. With this switch in the BLACKOUT position, 12-volt battery power is available from the headlamp switch to energize: blackout headlamp, marker lamps, tail lamps, and relay K4 and K5.
11. HEADLAMP SWITCH, Three-position switch with one OFF position and two ON positions. The switch supplies 12-volt battery power to the OPERATION lamp switch.
12. 24-VOLT TRAILER RECEPTACLE (M915, M916, and M920). Tractor mounted 12-pin connector to provide 24-volt battery power to trailer blackout tail and stop lamps.
13. STOP LAMP SWITCH. The stop lamp switch is part of the brake system and is shown and described in paragraph 2-63. In this circuit, the switch receives 12-volt battery power from circuit breaker CB-1. When the brakes are engaged, the switch closes and supplies 12-volt power through the operation lamp switch to energize relay K4. With this relay closed, 24-volt battery power is supplied through circuit breaker CB-8 to the 24-volt tractor mounted trailer receptacles.

TA 074583

## Section XIX INSTRUMENTATION

## 2-52. INTRODUCTION.

Table 2-1 lists the instruments and major input connections for all M915 thru M920 vehicles. Connections for instrument gage lamps have been omitted. (See wiring diagram in Appendix D.) You will find an illustration or schematic diagram for each listed instrument by using the Reference/Illustration column of the table.

Table 2-1. Instruments.

| Instrument                                       | Input Connections                                                                                                                                                                                                                    | Reference Illustration (Para) |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|

## Section XX ELECTRIC HORN

**2-53. INTRODUCTION.**

The electric horn circuit is identical on all M915 thru M920 vehicles.

**2-54. ELECTRIC HORN**

1. **ELECTRIC HORN.** The horn is energized by 12-volt battery power when horn button is depressed and operation lamp switch is in NORMAL position.
2. **RELAY (K1).** When horn button is depressed, coil of relay is energized by 12-volt battery power from circuit breaker. With relay de-energized, 12 volts are supplied from a second lead from circuit breaker, through operation lamp switch, through contacts of relay to horn.
3. **CIRCUIT BREAKER (CB-2)** Protects electrical components of horn circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
4. **HORN BUTTON.** Pushing this button activates the horn circuit and energizes the horn.
5. **OPERATION LAMP SWITCH.** Two-position switch for normal and blackout modes of operation. With switch set to NORMAL and horn button depressed, 12-volt battery power from circuit breaker passes through switch contacts to relay.

---

**Section XXI CAB HEATING AND VENTILATING SYSTEMS**

---

---

**2-55. INTRODUCTION.**

---

The cab heating and ventilating system are identical in all M915 thru M920 vehicles. This system is comprised of:

- a. Heater Electrical Control
- b. Heater Water Controls
- c. Ventilating System

---

**2-56. HEATER ELECTRICAL CONTROLS.**

---

1. ENGINE RUN SWITCH. Controls 12-volt battery power to heater fan switch. When switch is OFF, fan cannot be actuated.
2. CIRCUIT BREAKER (CB-4). Protects electrical components of heater fan switch by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
3. FAN SWITCH. Four-position switch with three ON positions. Supplies 12-volt battery power through circuit breaker (CB-4) to motor. Current flow increases as switch is moved from LOW to MEDIUM to HIGH.
4. MOTOR. Powers heater fan. Actuated by current from heater fan switch.

TA 074586

**2-57. HEATER WATER CONTROLS.**

1. HEATER KNOB. Allows operator to regulate flow of coolant through control valve.
2. CONTROL VALVE. Controls heater temperature by regulating flow of hot water to heater core. Cable from heater knob in cab opens valve as knob is pulled out. Valve is spring-loaded to close as knob is pushed in. Some water passes through this valve even when it is fully closed.
3. HEATER SHUTOFF VALVE. Supplies coolant to control valve. Manual shutoff handle allows complete cutoff of coolant flow to heater.
4. HEATER RETURN TUBE. Carries coolant from heater to water pump.
5. HEATER SUPPLY TUBE. Carries coolant from control valve to heater.

TA 074587

**2-58. VENTILATING SYSTEM.****NOTE**

The driver's fresh air vent is a manually operated unit mounted in the lower cowl side of the cab. It is not serviced at the organizational level.

1. HEAT CONTROL KNOB. Allows driver to heat cab, Connected by cable to water control valve.
2. FAN CONTROL SWITCH. Allows driver to control amount of heat in cab. Connected by electrical wires to heater motor.
3. DRIVER HEAT KNOB. Allows driver to open or close heat vent for his side of cab. Connected by cable to heat control lever.
4. PASSENGER HEAT KNOB. Allows passenger to open or close heat vent for his side of cab. Connected by cable to heat control lever.
5. FRESH VENT CONTROL KNOB. Allows driver to control fresh air vent on passenger side. Connected by cable to vent control lever.
6. RECIRCULATION VENT CONTROL KNOB. Allows driver to recirculate cab air through heater. Connected by cable to recirculation control lever.
7. WATER CONTROL VALVE. Allows flow of water through heater core. Actuated by cable from heat control knob.
8. HEATER MOTOR. Drives fan for distributing heat. Actuated by fan control switch.
9. HEAT CONTROL LEVER. Actuates flap at heat vent for passenger. Connected by cable to passenger pull knob.
10. HEAT CONTROL LEVER. Actuates flap at heat vent for driver. Connected by cable to driver pull knob.
11. RECIRCULATION CONTROL LEVER. Actuates shutter inside heater. Connected by cable to recirculation vent control knob.
12. FRESH VENT CONTROL LEVER. Actuates shutters at fresh air vent. Connected by cable to fresh vent control knob.

2-58. VENTILATING SYSTEM (Continued).

TA 074588

---

**Section XXII COMPRESSED AIR SYSTEM**

---

**2-59. INTRODUCTION.**

The compressed air supply system is the same in all M915 thru M920 vehicles.

**2-60. COMPRESSED AIR SYSTEM.**

1. SAFETY VALVE. Vents air when pressure in supply tank rises above 150 psi (1,034 kPa).
2. TRANSMISSION CONTROL LINE. Air supply to ratio selector valve in cab. (see para 2-12).
3. CHECK VALVE. One-way valve prevents air from flowing out of supply air reservoir back to compressor.
4. EXTERNAL AIR COUPLINGS. Tractor to trailer couplings are provided on M915, M916, and M920 models. All models are equipped with front external air couplings for brake use when the vehicle must be towed, Rear external air couplings are provided on M915, M916, M917 and M920 for brake actuation of a disabled vehicle being towed.
5. PRIMARY RESERVOIR LINE. Carries air from primary tank to supply reservoir.
6. TIRE INFLATION AIR HOSE FITTING. Used in conjunction with the tire inflation air hose and chuck.
7. ACCESSORY DRIVE. Provides power to operate compressor.
8. COMPRESSOR. Draws air from cleaner, compresses it, and directs it to supply air reservoir.
9. COMPRESSOR GOVERNOR. Opens unloading valve to vent air before compression when pressure in supply tank is above 105-125 psi (724-826 kPa).
10. AIR DRYER. Air from compressor is dried and contaminants are removed before entering the system.
11. SUPPLY AIR RESERVOIR. Receives compressed air from compressor.

2-60. COMPRESSED AIR SYSTEM (Continued).

---

## Section XXIII BRAKE SYSTEM

---

### 2-61. INTRODUCTION.

The brakes on all M915 thru M920 vehicles are actuated by the compressed air system (para 2-60).

The system is comprised basically of valves and controls for dual air brakes (service and emergency). "S"- type cam brakes with two air chambers are used in the rear on all models and on the pusher axle (Models M917, M919 and M920). Wedge-type brakes with one air chamber (M916 thru M920) or two air chambers (M915 only), are used in the front. (See illustration and description of each type of brake in paragraphs 2-65 thru 2-70).

(Refer to section XXIV for description of auxiliary air powered systems.)

This section is divided into three parts: controls, switches and indicators, and system components. Since the number of air reservoirs and the arrangement of valves and lines differs with each vehicle model, a separate arrangement drawing is provided for each in paragraphs 2-65 thru 2-70. (See Appendix D for a piping schematic diagram of each vehicle model.)

**2-62. CONTROLS.**

1. REAR AIR PRESSURE GAGE. Direct pressure gage indicates air pressure in rear service reservoir.
2. FRONT AIR PRESSURE GAGE. Direct pressure gage indicates air pressure in front service reservoir.
3. TRAILER EMERGENCY BRAKE VALVE. In applied position, supplies pressure to trailer service and emergency air lines.
4. PARKING BRAKE VALVE. Normally supplies pressure holding spring brakes in compressed position. When knob is pulled out, valve exhausts air pressure, allowing spring brakes to apply.
5. DUAL BRAKE VALVE. Applies front and rear service brakes at the same time when brake pedal is pushed.
6. TRAILER BRAKE HAND CONTROL (M915, M916 and M920). Applies trailer brakes only. Opens connection between air supply reservoir and trailer service brake lines as it is turned clockwise.
7. LOW AIR PRESSURE WARNING INDICATOR (12-volt). Circuit normally held open, by air pressure. Closes to activate control panel indicator when pressure drops below 70 psi.

TA 074590

## **2-63. BRAKE SWITCHES AND INDICATORS.**

1. STOP LAMP SWITCH. Normally open air actuated switch, which closes when brakes are actuated. The switch receives 12-volt battery power from circuit breaker CB-1 and supplies this power through the operation switch in NORMAL position, turn signal control to the tractor tail stop lamps. Also, with switch closed, 12-volt battery power is routed through the operation switch to the 12-volt trailer receptacle.
2. PARK BRAKE INDICATOR. Illuminates when the park brakes are applied. Indicator receives 12-volt battery power through engine run switch in ON position, circuit breaker CB-6, and actuated parking brake switch.
3. OPERATION LAMP SWITCH. Two-position switch for NORMAL and BLACKOUT modes of operation. With the switch set to NORMAL, 12-volt battery power is received from closed stop lamp switch, and circuit breaker CB-1. This 12-volt power is supplied through the turn signal control to the tractor tail stop lamp. 12-volt power is also supplied to the 12-volt trailer receptacle.
4. PARK BRAKE SWITCH. Normally open, air actuated switch on parking brake (para 2-62). Closes to energize park brake indicator when parking brakes are actuated.
5. CIRCUIT BREAKER (CB-6). Protects electrical components of parking brake circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
6. CIRCUIT BREAKER (CB-1). Protects electrical components of stop lamp circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
7. STOP TAIL LAMPS. Unit contains two bulbs, a single-filament bulb for backup, and a two-filament bulb for tail, turn signal, and stop lamps. The stop lamps receive 12-volt power through circuit breaker CB-1, closed stop lamp switch, closed contacts of operation switch, and the turn signal control.
8. CIRCUIT BREAKER (CB-6). Protects electrical components of parking brake circuit by opening when load exceeds 20 amps. Automatically recycles until overload is removed.
9. 12-VOLT TRAILER RECEPTACLE. When the stop lamp switch is closed and the operation switch is in NORMAL, 12-volt battery power is supplied to the tractor mounted receptacle for trailer stop lamps.

## 2-63. BRAKE SWITCHES AND INDICATORS (Continued).

TA 074591

**2-64. SYSTEM COMPONENTS.**

This paragraph describes and illustrates the major components that comprise the brake system in the M915 series vehicles.

- a. Wedge Brakes.
- b. "S"- Type Cam Brake.
- c. Air Chambers.
- d. Reserve Air Reservoir. (Supply reservoir is described in compressed air system, para 2-60).
- e. Relay Valve.
- f. Double-Check Valve.
- g. Quick-Release Valve.
- h. Limiting Valve.

A. WEDGE BRAKES. Used on front wheels of all six vehicle models.

TA 074592

**2-64. SYSTEM COMPONENTS (Continued).**

- B. "S"- TYPE CAM BRAKE. Used on rear tandem axle inside wheels on all six models and pusher axle wheel on M917, M919 and M920.

- C. AIR CHAMBER. Two used on each rear tandem axle of all vehicle models. Spring loaded brake applies when air pressure drops due to:

1. compressed air system failure.
2. engine shutdown.
3. application of park brakes.

TA 074593

**2-64. SYSTEM COMPONENTS (Continued).**

- D. RESERVE AIR RESERVOIR. Two reserve air reservoirs are used on M915, M916, and M918; three on M917, M919, and M920. (See illustrations in para 2-65 thru 2-70.)

- E. RELAY VALVE. Pressure from cab brake valves control flow of air from brake reservoirs to rear axle brake chambers. Applies rear brakes faster and more firmly than if they were actuated directly by air pressure in control lines from cab.

TA 074594

**2-64. SYSTEM COMPONENTS (Continued).**

- F. DOUBLE-CHECK VALVE. Directs air flow from either of two inlet lines into a single outlet line.

- G. QUICK-RELEASE VALVE. Vents air from rear brake system when operator releases brake.

- H. LIMITING VALVE. Directs air pressure from a single incoming line to brakes on both sides of truck.

**2-65. AIR SYSTEM ARRANGEMENT (M915).****NOTE**

The components shown below are described in paragraph 2-64.

**LEGEND:**

- |                                                         |                                      |

## Section XXIV AUXILIARY AIR-POWERED SYSTEMS

---

---

### 2-71. INTRODUCTION.

---

Air pressure from the compressed air system is used for the following: (Brakes are covered in section XXIII.)

- a. Transmission and Controls (para 2-12).
- b. Power Transfer Case (para 2-14).
- c. Pusher Axle (para 2-16).
- d. Windshield Wipers (para 2-72).
- e. Air Horn (para 2-73).
- f. Fan Clutch Control (para 2-74).

## 2-72. WINDSHIELD WIPERS AND WASHERS (Continued).

TA 074601

**2-73. AIR HORNS.**

1. AIR HORNS. Air-powered signaling devices.
2. CONTROL VALVE. Allows compressed air to flow to horns when lever is pulled downward.
3. LEVER. Actuates control valve when pulled downward by chain in cab.

TA 074602

**2-74. FAN CLUTCH CONTROLS.**

1. FAN CLUTCH. When actuator opens, compressed air from supply reservoir engages clutch to actuate fan.
2. FAN CLUTCH ACTUATOR. Opens air connection between supply reservoir and fan clutch when coolant temperature rises above 190°F (88°C).
3. PRIMARY RESERVOIR. Supplies air pressure to engage clutch and rotate fan when actuator opens air connection.

TA 074603

## Section XXV STEERING SYSTEM

### 2-75. INTRODUCTION.

Two power steering systems are used for the M915 thru M920 vehicles: one for the M915 and one for the M916 thru M920. The systems are identical, except for the following:

Auxiliary power cylinder and associated hydraulic lines - used on the M916 thru M920 only.

### 2-76. STEERING SYSTEM.

1. AUXILIARY ASSIST CYLINDER. Piston moved back and forth by pressure from lines. Connects to right wheel steering arm through auxiliary drag link. (M916 thru M920 ONLY.)
2. POWER STEERING GEAR. Hydraulically multiplies input torque from steering column and transmits it to Pitman arm.
3. UNIVERSAL. Changes angle of torque from steering wheel and applies it to input shaft of power steering gear.
4. STEERING WHEEL. Provides rotational torque to steering shaft, actuating steering system.
5. UNIVERSAL. Changes angle of steering torque.
6. HYDRAULIC PUMP AND RESERVOIR. Pump supplies hydraulic pressure to power steering system. Reservoir provides a supply of oil to assure complete filling of hydraulic system.
7. STEERING GEAR RETURN LINE. Carries hydraulic fluid from steering gear back to reservoir.
8. STEERING GEAR SUPPLY LINE. Carries hydraulic fluid under pressure from pump to steering gear.
9. STEERING ARM. Transmits fore and aft movement from drag link to knuckle assembly.
10. DRAG LINK. Transfers motion of Pitman arm to steering arm and tie rod.
11. TIE ROD ASSEMBLY. Connects steering arms so that wheels turn together.
12. PITMAN ARM. Transfers steering torque (boosted by power steering gear to drag link).
13. AUXILIARY CYLINDER HYDRAULIC LINES. Carry fluid under pressure from the steering gear to operate auxiliary cylinder.
14. POWER STEERING COOLER. Cools power steering fluid by means of finned unit on vehicle grille, exposed to outside air. After the fluid is cooled, it is returned to the power steering system.

## 2-76. STEERING SYSTEM (Continued).

---

**Section XXVI POWER TAKEOFF**

---

**2-77. INTRODUCTION.**

The power takeoff is installed on M916 thru M920. It supplies power from the engine to auxiliary equipment.

**2-78. POWER TAKEOFF.**

1. PTO ADAPTER. Mounts on transmission and mates to transmission drive gear.
2. PTO. Gear driven from adapter. Provides drive for:
  - a. Winch hydraulic pump on the M916 and M920 (para 2-80).
  - b. Hoist cylinder hydraulic pump on the M917 (TM 5-3805-274-24 & P).
  - c. Hydraulic power pump on the M918 (TM 5-3895-371-24 & P).
  - d. Power train jack screw for conveyor drive on the M919 (TM 5-3895-372-20).
3. CONTROL LEVER. Engages or disengages PTO. Actuated by pulling control knob in cab.
4. PTO CONTROL KNOB. Allows movement of control lever from cab. Pulling knob out engages PTO. Pushing knob in disengages PTO.

TA 074605

---

**Section XXVII WINCH**

---

---

**2-79. INTRODUCTION.**

---

The winch is installed on M916 and M920. The assembly is located behind the cab with all operating controls.

**2-80. WINCH.**

1. **INLINE RETURN FILTER.** Throwaway filter removes water and dirt from oil returning to reservoir.
2. **WINCH CABLE.** 7/8 inch (22.2 mm) diameter wire rope, 150 feet (46 m) long. Rated at 75,000 lbs (33,600 N) minimum breaking strength.
3. **CONTROL VALVE.** Detented "up" position supplies pressure to outlet for auxiliary hydraulic system. Down position provides high speed winch operation.
4. **AUXILIARY THROTTLE.** Adjusts power input to PTO by altering engine speed.
5. **DIRECTIONAL CONTROL VALVE.** Controls winch direction. Spring-loaded valve returns to middle position when released, causing winch brakes to apply.
6. **HYDRAULIC MOTOR.** Turns winch to pay out or haul in cable. Powered by oil under pressure from pump.
7. **DUAL PUMP.** 22 gpm/gear; total of 44 gpm @ 2200 engine rpm gear type pump powered by PTO supplies 2350 psi (14,800 kPa) hydraulic pressure to motor through hydraulic valves.
8. **POWER TAKEOFF.** Drives dual pump. (See paragraph 2-78 for functional description.)
9. **INLET STRAINER.** Removes large particles from oil going to dual pump.
10. **HYDRAULIC RESERVOIR.** Supplies oil to dual pump and receives oil returning from system.
11. **COVER PLATE.** When removed allows access to interior of reservoir to service internal strainer and for general clean out.

2-80. WINCH (Continued).

---

**Section XXVIII WINTERIZATION KIT**

---

---

**2-81. INTRODUCTION.**

---

The Winterization Kit is an available option on all M915 thru M920 vehicles. This kit facilitates vehicle start-up at temperatures down to -50°F (-46°C.). The components of this kit are described below.

---

**2-82. WINTERIZATION KIT.**

---

1. 110 VAC POWER CORD. This twenty-five foot power cord is used to connect a suitable 110/115 V exterior power supply to the power receptacle mounted on top of the vehicle circuit breaker box.
2. CIRCUIT BREAKER BOX. Mounted to the vehicle right side behind the front fender and in front of the battery box, this control center channels incoming 110 VAC electrical power to any of four separate heaters. Each of the heaters is controlled and protected by an individual circuit breaker.
3. TRANSMISSION OIL HEATER. Located on the forward, lower, left side of the transmission, this immersion heater supplies 375 watts. No thermostat is used due to the relatively low wattage. When the 110 VAC power cord is plugged in, this heater can be operated by the circuit breaker so marked. The breaker is a 15 ampere.
4. ENGINE OIL HEATER. Also an immersion type heater, the unit is mounted thru the aft, lower, left side of the engine oil pan with a capacity of 750 watts, which is controlled by a thermostat set at 170°F. The thermostat mounts to a plate outside the oil pan and is protected by an insulated waterproof cover. When the 110 VAC power cord is plugged in, this heater can be operated by the circuit breaker so marked. The breaker is a 15 ampere.
5. ENGINE COOLANT HEATER. This thermo-syphon type requires no circulating pump and has a capacity of 2700 to 2800 watts. The heating unit integral with a thermostat set at 190° F, is mounted to the main right hand frame rail below the turbocharger. The heated coolant is piped to the top of the engine into the rear water manifold. The hot coolant flows down thru the engine as the cold coolant returns to the heater. When the 110 VAC power cord is plugged in, this heater can be operated by the circuit breaker so marked. The breaker is a 30 ampere.
6. BATTERY BOX HEATER. The battery box is insulated and heated by a coil, under the battery support, with a capacity of 550 watts. A thermostat mounted on the inside back wall of the box closes at +35°F and opens at +55°F. When the 110 VAC power cord is plugged in, this heater can be operated by the circuit breaker so marked. The breaker is a 15 ampere.

**2-82. WINTERIZATION KIT (Continued).**

## CHAPTER 3

### INTEGRATED SYSTEMS MAINTENANCE

---

---

#### **3-1. OVERVIEW.**

This chapter provides you with the following information related to overall truck tractor/truck chassis maintenance:

- a. Tools and Equipment.
- b. Service Upon Receipt.
- c. Preventive Maintenance Checks and Services (PMCS).
- d. Composite Troubleshooting Index.

---

#### **Section I REPAIR PARTS, SPECIAL TOOLS, TMDE, AND SUPPORT EQUIPMENT**

---

---

#### **3-2. COMMON TOOLS AND EQUIPMENT.**

For authorized common tools and equipment, refer to the Modified Table of Organization and Equipment (MTOE) applicable to your unit.

---

#### **3-3. SPECIAL TOOLS, TMDE, AND SUPPORT EQUIPMENT.**

There are no special tools, TM DE and support equipment required for the procedures in this chapter.

---

#### **3-4. SPARES AND REPAIR PARTS.**

Spares and repair parts are listed and illustrated in the Repair Parts and Special Tools List covering Organizational Maintenance for this equipment (TM 9-2320-273-20P).

---

#### **Section II SERVICE UPON RECEIPT**

---

---

#### **3-5. CHECKING UNPACKED EQUIPMENT.**

- a. Inspect the equipment for damage incurred during shipment. If the equipment has been damaged, report the damage on SF Form 364, Report of Discrepancy (ROD).
- b. Check the equipment against the packing slip to see if the shipment is complete. Report all discrepancies in accordance with the instructions of DA PAM 738-750.

**3-6. SERVICE UPON RECEIPT CHECKLIST M915 THRU M920 VEHICLES.**

| LOCATION/ITEM                                                                                                                                                                                                                                                                                                                 | ACTION                                                                                                   | REMARKS                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| 1. Protective wrappings.                                                                                                                                                                                                                                                                                                      | Remove.                                                                                                  |                                                                           |
| 2. Engine, tires, glass panels, instruments.                                                                                                                                                                                                                                                                                  | Check for missing parts or shipping damage.                                                              |                                                                           |
| 3. Separately packaged kits.                                                                                                                                                                                                                                                                                                  | Inspect for damage.                                                                                      |                                                                           |
| 4. Brakes and brake shoes.                                                                                                                                                                                                                                                                                                    | Check to be sure brake shoes do not stick to brake drums.                                                | See para 2-64 thru 2-70 for locations.                                    |
| 5. Breather tube, air intake, exhaust stack, transmission, alternator, brakes.                                                                                                                                                                                                                                                | Remove all tape and wrapping.                                                                            | See paras 2-12, 2-25, 2-27, 2-30, 2-42, and 2-64 thru 2-70 for locations. |
| 6. Water pump and alternator belts.                                                                                                                                                                                                                                                                                           | Check tension and adjust if necessary.                                                                   | See para 4-51 and 4-53.                                                   |
| 7. Cooling system, fuel system, transmission, and differentials.                                                                                                                                                                                                                                                              | Check fluid levels.                                                                                      | TM 9-2320-273-10.                                                         |
| <div style="text-align: center;">  <p>Do not allow SD-2 dry cleaning solvents to come in contact with seals or flexible hoses. These cleaners cause leather, rubber, and synthetic materials to dry out, rot, and lose pliability</p> </div> |                                                                                                          |                                                                           |
| 8. Machined surfaces                                                                                                                                                                                                                                                                                                          | Remove wrappings. Clean with SD-2 dry cleaning solvent.                                                  |                                                                           |
| 9. a. Key switch, engine retarder switch, worklamps, clearance lamps, headlamp switch, cigar lighter.                                                                                                                                                                                                                         | Make sure all electrical switches are OFF.                                                               | See TM 9-2320-273-10 for locations.                                       |
| b. Battery cables.                                                                                                                                                                                                                                                                                                            | Connect.                                                                                                 | See para 5-37.                                                            |
| 10. Oil system.                                                                                                                                                                                                                                                                                                               | If truck is due for an oil change, drain crankcase, replace filters, and refill to operating level.      | See para 4-14.                                                            |
| 11. Entire vehicle.                                                                                                                                                                                                                                                                                                           | a. Lubricate.<br>b. Inspect for:<br>1. Leaks.<br>2. Loose or broken hoses and lines.<br>3. Other damage. | See LO 9-2320-273-12.                                                     |

### Section III. PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS)

**3-7. PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) INTRODUCTION.** This section contains Unit PMCS requirements for the M915 vehicle. The PMCS tables contain checks and services necessary to ensure the vehicle is ready for operation. Using the PMCS tables, perform maintenance at the specified intervals. Preventive Maintenance Checks and Services in TM 9-2320-273-10 must be completed before doing Unit preventive maintenance.

**3-8. MAINTENANCE FORMS AND RECORDS.** Every mission begins and ends with paperwork. There is not much of it, but it must be kept up. The filled out forms and records have several uses. They are a record of the services, repairs, and modifications made on the vehicle; they are reports to unit maintenance and to the Commander; and they serve as a checklist to find out what is wrong with the vehicle after its last use, and whether those faults have been fixed. For information needed on forms and records, see DA PAM 738-750.

### 3-9. GENERAL MAINTENANCE PROCEDURES.

#### **WARNING**

Adhesives, solvents, and sealing compounds can burn easily, can give off harmful vapors, and are harmful to skin and clothing. To avoid injury or death, keep away from fire and use in well-ventilated area. If adhesive, solvents, or sealing compound get on skin or clothing, wash immediately with soap and water.

a. **CLEANLINESS.** Dirt, grease, oil and debris only get in the way and may cover up a serious problem. Use dry cleaning solvent on metal surfaces and soapy water on rubber.

b. **BOLTS, NUTS, AND SCREWS.** Check bolts, nuts, and screws for obvious looseness, missing, bent, or broken condition and tighten or replace as necessary. They cannot all be checked with a tool, of course, but look for chipped paint, bare metal, or rust around bolt heads.

c. **WELDS.** Look for loose or chipped paint, rust, or gaps where parts are welded together. If a bad weld is found, have it repaired.

d. **ELECTRIC WIRES AND CONNECTORS.** Look for cracked or broken insulation, bare wires, and loose or broken connectors. Tighten loose connectors and make sure the wires are in good shape.

e. **HYDRAULIC LINES AND FITTINGS.** Look for wear, damage, leaks, and make sure clamps and fittings are tight. Wet spots show leaks, of course, but a stain around a fitting or connector may indicate a leak. If a connector or fitting is loose, tighten it. If something is broken or worn out, repair or replace per applicable procedure.

**3-10. FLUID LEAKAGE.** It is necessary to know how fluid leakage affects the status of fuel, oil, coolant, and the hydraulic systems. The following are definitions of types/classes of leakage necessary to know in order to determine the status of the vehicle.

#### **CAUTION**

Equipment operation is allowable with minor leakages (Class I or II). Of course, consideration must be given to the field capacity in the item/system being checked/inspected. When in doubt, notify the supervisor. When operating with Class I or II leaks, continue to check fluid levels as required in the PMCS. Class III leaks should be repaired per applicable procedure.

a. **Class 1.** Seepage or fluid as indicated by wetness or discoloration not great enough to form drops.

- b. Class II. Leakage of fluid great enough to form drops but not enough to cause drops to drip from item being checked/inspected.
- c. Class III. Leakage of fluid great enough to form drops that fall from the item being checked/inspected.

### **3-11. PREVENTIVE MAINTENANCE CHECKS AND SERVICES (PMCS) TABLES.**

- a. Do the (S) PREVENTIVE MAINTENANCE once every six months and/or every 3000 miles (4,827 KM) whichever comes first.
- b. Do the (A) PREVENTIVE MAINTENANCE once each year and/or every 6,000 miles (9,654 KM) whichever comes first.
- c. Do the (B) PREVENTIVE MAINTENANCE once each year and/or every 12,000 miles (19,308 KM) whichever comes first.
- d. Always do the PREVENTIVE MAINTENANCE in the same order until it gets to be a habit. Once practiced, it will be easy to spot anything wrong in a hurry.
- e. If something does not work, troubleshoot with instructions in Chapter 2.
- f. If anything looks wrong and is not fixed, write a DA Form 2404.
- g. When doing preventive maintenance, take along the tools and supplies needed to make all the checks. Always take a clean cloth or two.

Table 3-1. Unit Level Preventive Maintenance Checks and Services M915-M920

| Item No. | Interval    | Item To Be Inspected | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Not Mission Capable If:                                                                                                  |
|----------|-------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 1        | Semi-Annual | Pre-Service Checks   | <p><u>PRIOR TO ROAD TEST</u></p> <p>Ensure Operator/Crew has performed -10 PMCS listed in TM 9-2320-273-10.</p> <p><b>ROAD TEST</b></p> <p>Maintenance personnel will be with vehicle operator to assist in performing -10 PMCS checks and verify pre-service checks.</p> <p><b>NOTE</b></p> <p>The following will be performed during the road test. These inspections must be performed before any -20 level PMCS regardless of interval.</p> <p>For road test, vehicle will be driven at least five miles over different ground to give enough time to detect any malfunctions.</p> <p>a. Notice if starter engages smoothly and turns the engine at normal cranking speed.</p> <p>b. Listen for unusual engine noise at idle, at operating speeds, and under acceleration. Be alert for excessive vibration and the smell of oil, fuel and exhaust.</p> | <p>a. Starter inoperative or makes excessive grinding sound.</p> <p>b. Engine knocks, rattles or smokes excessively.</p> |

Table 3-1. Unit Level Preventive Maintenance Checks And Services M915-M920

| Item No. | Interval    | Item To Be Inspected                | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Not Mission Capable If:                                                                                                                                                                                                                                                                                                                                                                                                |
|----------|-------------|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1        | Semi-Annual | Pre-Service Checks<br><br>Continued | <p>c. Check for transmission response to shifting and for smoothness of operation in all speed ranges. Be alert for unusual noises and difficulty in shifting in any speed range.</p> <p>d. Check for transfer response to shifting and for smoothness of operation in all gear ranges. Be alert for unusual noises and difficulty in shifting in any gear range.</p> <p>e. Test for response to accelerator feed. Observe for sticking pedal.</p> <p>f. With vehicle speed approximately 5 mph (8 kph) turn steering wheel to left, then right, to detect steering backlash, shimmy or freeplay is more than 1-1/2 inches (38 mm) if either direction. Vehicle should respond instantly. With vehicle moving on straight, level terrain, lightly hold steering wheel to check for pull and wandering.</p> <p>g. Apply brake pedal with steady force. Vehicle should slow down and stop without pulling to one side or jerking. Release brake pedal. The brakes should release immediately and without difficulty.</p> <p>h. Observe vehicle response to road shocks, side sway or continuous bouncing indicates a malfunction.</p> | <p>c. Transmission shifts improperly, does not shift or makes excessive noises.</p> <p>d. Transfer jumps out of gear or makes excessive noises.</p> <p>e. Pedal sticking or binding.</p> <p>f. Steering binds, grabs, wanders or freeplay is more than 1-1/2 inch (38 mm) in either direction.</p> <p>g. Brakes chatter, pull to one side or inoperative. Brakes will not release.</p> <p>h. Handling is unstable.</p> |

| <b>NOTE:</b> The man-hours shown above have been established on an individual vehicle basis and hence are not applicable at maintenance facilities where production line methods are employed. |                               |                                                                                                                                                                                                                                                                                                                                                                                            |                                 |                                               |    |    |     |

## Section IV TROUBLESHOOTING SYMPTOM INDEX

### 3-8. INTRODUCTION.

Detailed troubleshooting procedures are provided in chapters 4 thru 12 of this manual. The procedures are arranged by subsystem categories under Malfunction Symptoms. The following composite Malfunction Symptom Index provides a cross reference to the troubleshooting procedures contained in the other chapters.

**Table 3-2. Composite Troubleshooting Symptom Index**

|                                                                     | Troubleshooting Procedures |                    |
|---------------------------------------------------------------------|----------------------------|--------------------|
|                                                                     | Table                      | Malfunction Number |
| <b>BACKUP LAMPS.</b>                                                |                            |                    |
| Backup lamp(s) inoperative.                                         | 5-12                       | 1                  |
| <b>BATTERY SYSTEM.</b>                                              |                            |                    |
| All electrical systems are weak.                                    | 5-1                        | 1                  |
| Engine fails to crank or cranks slowly.                             | 5-1                        | 2                  |
| Batteries do not hold a charge.                                     | 5-1                        | 3                  |
| <b>BLACKOUT LIGHTING SYSTEM.</b>                                    |                            |                    |
| All blackout lamps inoperative.                                     | 5-13                       | 1                  |
| One blackout marker, headlamp, tail lamp, or stop lamp inoperative. | 5-13                       | 2                  |
| Trailer blackout lamps inoperative.                                 | 5-13                       | 3                  |
| <b>CHARGING CIRCUIT.</b>                                            |                            |                    |
| Batteries are being undercharged or overcharged.                    | 5-5                        | 1                  |
| <b>COMPRESSED AIR AND BRAKE SYSTEMS.</b>                            |                            |                    |
| Insufficient air pressure.                                          | 9-1                        | 1                  |
| Excessive system pressure indicated.                                | 9-1                        | 2                  |
| Park brakes will not release.                                       | 9-1                        | 3                  |
| Trailer brakes will not release.                                    | 9-1                        | 4                  |
| Service brakes will not release (one wheel only).                   | 9-1                        | 5                  |
| Service brakes will not apply.                                      | 9-1                        | 6                  |

**Table 3-2. Composite Troubleshooting Symptom Index (Continued).**

|                                                                  | Troubleshooting Procedures |                    |
|------------------------------------------------------------------|----------------------------|--------------------|
|                                                                  | Table                      | Malfunction Number |
| <b><u>COMPRESSED AIR AND BRAKE SYSTEMS (Continued).</u></b>      |                            |                    |
| No service brakes on trailer only.                               | 9-1                        | 7                  |
| Trailer hand control unit will not apply trailer service brakes. | 9-1                        | 8                  |
| Park brakes will not apply.                                      | 9-1                        | 9                  |
| Service brakes are weak or slow responding (all wheels).         | 9-1                        | 10                 |
| Front service brakes are weak or slow responding.                | 9-1                        | 11                 |
| Rear service brakes are uneven or erratic.                       | 9-1                        | 12                 |
| Service brakes are uneven or erratic on one or more wheels.      | 9-1                        | 13                 |
| Brakes overheat.                                                 | 9-1                        | 14                 |
| Stop lamps do not operate, brakes function normally.             | 9-1                        | 15                 |
| Pressure gage(s) not indicating or not accurate, brakes normal.  | 9-1                        | 16                 |
| Air horn does not operate.                                       | 9-1                        | 17                 |
| Windshield wipers are inoperative.                               | 9-1                        | 18                 |
| Interaxle differential lockup inoperative.                       | 9-1                        | 19                 |
| <b><u>ENGINE.</u></b>                                            |                            |                    |
| Engine will not crank.                                           | 4-1                        | 1                  |
| Engine will crank but not start.                                 | 4-1                        | 2                  |
| Engine stops, not seized.                                        | 4-1                        | 3                  |
| Engine stops, seized.                                            | 4-1                        | 4                  |
| High oil consumption.                                            | 4-1                        | 5                  |
| Intermittent loss of power.                                      | 4-1                        | 6                  |
| Sudden loss of power.                                            | 4-1                        | 7                  |
| Gradual loss of power, no smoke.                                 | 4-1                        | 8                  |
| Slow deceleration, engine "floats".                              | 4-1                        | 9                  |

|                                                                  | Troubleshooting Procedures |                    |
|------------------------------------------------------------------|----------------------------|--------------------|
|                                                                  | Table                      | Malfunction Number |
| <b><u>ENGINE (Continued).</u></b>                                |                            |                    |
| Erratic idle speed.                                              | 4-1                        | 10                 |
| Excessive exhaust smoke during acceleration.                     | 4-1                        | 11                 |
| Excessive exhaust smoke throughout speed range.                  | 4-1                        | 12                 |
| High fuel consumption.                                           | 4-1                        | 13                 |
| Low oil pressure.                                                | 4-1                        | 14                 |
| No cab heat.                                                     | 4-1                        | 15                 |
| Excessive exhaust noise.                                         | 4-1                        | 16                 |
| Exhaust fumes in cab.                                            | 4-1                        | 17                 |
| Engine overheats                                                 | 4-1                        | 18                 |
| <b><u>ENGINE RETARDER CONTROLS.</u></b>                          |                            |                    |
| No retarding action.                                             | 5-4                        | 1                  |
| Retard inoperative in one or two selector position.              | 5-4                        | 2                  |
| <b><u>ETHER QUICK-START CONTROLS.</u></b>                        |                            |                    |
| Solenoid cannot be heard to click when ether button is pushed.   | 5-3                        | 1                  |
| <b><u>FRAME.</u></b>                                             |                            |                    |
| Towing pintle does not pivot or latch, or jaw is stuck.          | 11-1                       | 1                  |
| Excessive jerking of towed trailer.                              | 11-1                       | 2                  |
| Excessive noise or popping sounds from fifth wheel when turning. | 11-1                       | 3                  |
| <b><u>HEADLAMPS.</u></b>                                         |                            |                    |
| Both headlamps blink on and off.                                 | 5-8                        | 1                  |
| One headlamp inoperative.                                        | 5-8                        | 2                  |
| Both headlamps inoperative.                                      | 5-8                        | 3                  |
| High beam indicator inoperative.                                 | 5-8                        | 4                  |

|---------------------------------------------------------------|----------------------------|--------------------|
|                                                               | Table                      | Malfunction Number |
| <b><u>INSTRUMENTS AND INDICATORS.</u></b>                     |                            |                    |
| Differential lockup lamp inoperative.                         | 5-7                        | 1                  |
| Park brake lamp inoperative.                                  | 5-7                        | 2                  |
| Instrument panel gages inoperative.                           | 5-7                        | 3                  |
| Tachograph clock is inoperative.                              | 5-7                        | 4                  |
| Indicator/illumination lamp out.                              | 5-7                        | 5                  |
| <b><u>MARKER LAMPS.</u></b>                                   |                            |                    |
| Front marker lamps inoperative.                               | 5-9                        | 1                  |
| Intermediate marker lamps inoperative.                        | 5-9                        | 2                  |
| Rear marker lamps inoperative.                                | 5-9                        | 3                  |
| All marker lamps inoperative.                                 | 5-9                        | 4                  |
| <b><u>MISCELLANEOUS ELECTRICAL.</u></b>                       |                            |                    |
| Electric horn inoperative.                                    | 5-14                       | 1                  |
| Personnel heater fan inoperative.                             | 5-14                       | 2                  |
| Dome lamp inoperative.                                        | 5-14                       | 3                  |
| Work lamps inoperative.                                       | 5-14                       | 4 & 5              |
| Cigar lighter inoperative.                                    | 5-14                       | 6                  |
| Winterization kit malfunctioning.                             | 5-14                       | 7                  |
| <b><u>PARKING AND TAIL LAMPS.</u></b>                         |                            |                    |
| Single lamp inoperative.                                      | 5-10                       | 1                  |
| Front lamps inoperative.                                      | 5-10                       | 2                  |
| Rear lamps inoperative.                                       | 5-10                       | 3                  |
| <b><u>POWER TAKEOFF.</u></b>                                  |                            |                    |
| PTO will not engage.                                          | 12-2                       | 1                  |
| PTO is excessively noisy.                                     | 12-2                       | 2                  |
| <b><u>POWER TRANSFER CASE..</u></b>                           |                            |                    |
| Power transfer case does not turn front axle propeller shaft. | 7-1                        | 1                  |
| Excessive heat buildup.                                       | 7-1                        | 2                  |

|                                                           | Troubleshooting Procedures |                    |
|-----------------------------------------------------------|----------------------------|--------------------|
|                                                           | Table                      | Malfunction Number |
| <b><u>POWER TRANSFER CASE (Continued).</u></b>            |                            |                    |
| Lubricant leaking.                                        | 7-1                        | 3                  |
| Transfer case noisy (oil level okay).                     | 7-1                        | 4                  |
| <b><u>PROPELLER SHAFTS AND AXLES.</u></b>                 |                            |                    |
| Excessive shaft noise or vibration.                       | 8-1                        | 1                  |
| Excessive backlash.                                       | 8-2                        | 1                  |
| Continuous axle or wheel noise.                           | 8-2                        | 2                  |
| Lubricant leaking.                                        | 8-2                        | 3                  |
| Excessive or uneven tire wear.                            | 8-2                        | 4                  |
| <b><u>STARTER SYSTEM.</u></b>                             |                            |                    |
| Starter fails to crank or cranks too slowly.              | 5-2                        | 1                  |
| Starting motor is noisy and engagement is erratic         | 5-2                        | 2                  |
| <b><u>STEERING.</u></b>                                   |                            |                    |
| Front tires wearing unevenly.                             | 10-2                       | 1                  |
| Hard steering.                                            | 10-2                       | 2                  |
| Vehicle wanders or pulls to one side.                     | 10-2                       | 3                  |
| Lost motion or excessive play in steering wheel.          | 10-2                       | 4                  |
| Temporary increase in effort when turning steering wheel. | 10-2                       | 5                  |
| Vehicle does not fully steer from stop to stop.           | 10-2                       | 6                  |
| <b><u>STOP AND TURN SIGNAL LAMPS.</u></b>                 |                            |                    |
| Turn signals inoperative.                                 | 5-11                       | 1                  |
| Stop lamps inoperative.                                   | 5-11                       | 2                  |
| <b><u>SUSPENSION.</u></b>                                 |                            |                    |
| Vehicle wanders or shimmies.                              | 10-3                       | 1                  |
| Pusher axle will not raise or lower.                      | 10-3                       | 2                  |
| Rear axle assembly not tracking properly.                 | 10-3                       | 3                  |

Table 3-2. Composite Troubleshooting Symptom Index (Continued).

|                                                                                                           | Troubleshooting Procedures |                    |
|-----------------------------------------------------------------------------------------------------------|----------------------------|--------------------|
|                                                                                                           | Table                      | Malfunction Number |
| <b><u>TRANSMISSION.</u></b>                                                                               |                            |                    |
| Selector lever cannot be moved from NEUTRAL position.                                                     | 6-1                        | 1                  |
| Engine does not turn driveshaft in any speed, forward or reverse.                                         | 6-1                        | 2                  |
| Engine turns driveshaft in some gears, but not others.                                                    | 6-1                        | 3                  |
| Engine does not turn power takeoff in NEUTRAL.                                                            | 6-1                        | 4                  |
| Truck moves when engine is at low idle and transmission in gear.                                          | 6-1                        | 5                  |
| Transmission housing breather shows an air leak after the shift is complete.                              | 6-1                        | 6                  |
| Transmission feels like it is engaged, then not engaged, then engaged again – Transmission is also noisy. | 6-1                        | 7                  |
| Transmission has a decrease in oil level with an increase in oil in the engine.                           | 6-1                        | 8                  |
| Transmission gears make noise during a shift,                                                             | 6-1                        | 9                  |
| <b><u>WARNING LAMPS AND ALARMS.</u></b>                                                                   |                            |                    |
| Engine temperature warning lamp inoperative.                                                              | 5-6                        | 1                  |
| Engine oil pressure low warning lamp inoperative.                                                         | 5-6                        | 2                  |
| Low air pressure warning lamp and/or buzzer inoperative.                                                  | 5-6                        | 3                  |
| Backup alarm is inoperative.                                                                              | 5-6                        | 4                  |
| <b><u>WHEELS AND TIRES.</u></b>                                                                           |                            |                    |
| Tires wearing unevenly.                                                                                   | 10-1                       | 1                  |
| Noisy or bumping sound while traveling on the road.                                                       | 10-1                       | 2                  |
| <b><u>WINCH.</u></b>                                                                                      |                            |                    |
| Winch operates in one direction only.                                                                     | 12-1                       | 1                  |
| Winch does not operate in either direction.                                                               | 12-1                       | 2                  |
| Winch operates at one speed only.                                                                         | 12-1                       | 3                  |
| Winch will not hold suspended load.                                                                       | 12-1                       | 4                  |

## Section V TORQUE INSTRUCTIONS

---

**3-9.** Use these guidelines when tightening bolts and capscrews:

- a. If the text gives a specific torque value, use it.
- b. Never torque engine capscrew beyond the values given for grade 5 in table 3-3.
- c. If no torque is specified, refer to table 3-3 for torque value.

**CAUTION**

Never torque an engine capscrew beyond the value given for grade 5, even if it is marked as grade 6, 7 or 8.

**Table 3-3. Standard Capscrew Markings and Torque.**

| Current Usage                                 | Much Used                                                              | Much Used                                  | Used at Times                                       | Used at Times          |
|-----------------------------------------------|------------------------------------------------------------------------|--------------------------------------------|-----------------------------------------------------|------------------------|

| - 16                                                         | 115(156)              | 295(400)              | 375(508)              |
| 7/8 – 9                                                      | 160(217)              | 395(536)              | 420(569)              |
| - 14                                                         | 175(237)              | 435(590)              | 605(820)              |
| 1 – 8                                                        | 235(319)              | 590(800)              | 675(915)              |
| - 14                                                         | <b>250(339)</b>       | <b>660(895)</b>       | 910(1234)             |
|                                                              |                       |                       | <b>990(1342)</b>      |

1. Always use the torque values listed above when definite specifications are not available.

Note: Do not use standard values in place of those specified in other sections of this manual; special attention should be observed when using SAE Grade 6, 7 and 8 capscrews.

2. The above is based on use of clean and dry threads.

3. Reduce torque by 10% when engine oil is used as a lubricant.

4. Reduce torque by 20% if new plated capscrews are used.

Caution: Capscrews threaded into aluminum may require reductions in torque of 30% or more, unless inserts are used.

TA 074608

## CHAPTER 4

### ENGINE AND ENGINE SYSTEMS MAINTENANCE

---

#### 4-1. OVERVIEW.

---

This chapter provides you with the following information related to engine maintenance:

- a. All required special tools and equipment
- b. Other technical manuals
- c. Troubleshooting procedures
- d. Maintenance procedures

---

### Section I REPAIR PARTS, SPECIAL TOOLS, TMDE, AND SUPPORT EQUIPMENT

---

#### 4-2. COMMON TOOLS AND EQUIPMENT.

---

For authorized common tools and equipment, refer to the Modified Table of Organization and Equipment (MTOE) applicable to your unit.

#### 4-3. SPECIAL TOOLS, TMDE, AND SUPPORT EQUIPMENT.

---

The special tools, TM DE, and support equipment required for the engine maintenance procedures described in this chapter are limited to the oil filter strap wrench. (Refer to Organizational Maintenance RPSTL, TM 9-2320-273-20P for tool description and illustration.)

#### 4-4. SPARES AND REPAIR PARTS.

---

Spares and repair parts are listed and illustrated in the Repair Parts and Special Tools List covering Organizational Maintenance for this equipment (TM 9-2320-273-20P).

---

### Section II TROUBLESHOOTING

---

#### 4-5. INTRODUCTION.

---

Procedures for troubleshooting the engine and engine systems are given in table 4-1. These procedures are limited to isolation of faulty components that can be repaired or replaced at the Organizational Maintenance level. (For repair and replacement, see section III in this chapter.) A complaint by the operator may have a variety of causes, singly or in combination. For example, in cases where internal engine parts have failed, the true cause can usually be found in one or more of the fluid systems and less frequently in the internal parts themselves. Therefore, a thorough repair would include the investigation and discovery of the faulty system.

**Table 4-1. Engine and Engine Systems Troubleshooting.**

| MALFUNCTION.                        | TEST OR INSPECTION.                                                        | CORRECTIVE ACTION.                                                                   |
|-------------------------------------|----------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| 1. ENGINE WILL NOT CRANK:           | Step 1. Check battery condition.                                           | Test, charge, or replace as indicated by hydrometer (para 5-7).                      |
|                                     | Step 2. Check battery cables and terminals for loose or dirty connections. | Clean and tighten connections.                                                       |
|                                     | Step 3. Check electrical starting system.                                  | a. Troubleshoot starting system (para 5-8).<br>b. Notify Direct Support Maintenance. |
| 2. ENGINE WILL CRANK BUT NOT START: | Step 1. Check fuel level in tank.                                          | Add fuel, if required.                                                               |
|                                     | Step 2. Check fuel solenoid shutoff valve.                                 | Repair, if required (para 4-16).                                                     |
|                                     | Step 3. Check for leaking fuel lines.                                      | Tighten connections or replace fuel lines as required (para 4-20).                   |
|                                     | Step 4. Check for air cleaner element restriction.                         | Service air cleaner element (para 4-24).                                             |
|                                     | Step 5. Check for white exhaust smoke.                                     | Use cold weather starting aid (Refer to TM 9-2320-273-10).                           |
|                                     | Step 6. Check for dirty fuel filter.                                       | Service fuel filter (para 4-18).                                                     |
|                                     | Step 7. Check for congealed fuel (cold weather).                           | Check fuel specifications (Refer to TM 9-2320-273-10).                               |
| 3. ENGINE STOPS, NOT SEIZED:        | Step 1. Refer to steps 1 thru 7 of Malfunction 2 above.                    |                                                                                      |
|                                     | Step 2. Check for obstructed air vent in fuel tank.                        | Remove air vent (para 4-23), then clean.                                             |
| 4. ENGINE STOPS, SEIZED:            | Refer problem to Direct Support Maintenance.                               |                                                                                      |

**Table 4-1. Engine and Engine Systems Troubleshooting (Continued).**

| MALFUNCTION.                   |                                                                                                         |
|--------------------------------|---------------------------------------------------------------------------------------------------------|
| TEST OR INSPECTION.            |                                                                                                         |
| CORRECTIVE ACTION.             |                                                                                                         |
| 5. HIGH OIL CONSUMPTION:       |                                                                                                         |
| Step 1.                        | Check for overfilling.                                                                                  |
|                                | a. Check oil level.                                                                                     |
|                                | b. Determine that you have proper dipstick by matching against known proper configuration.              |
| Step 2.                        | Check service records to determine that proper viscosity of oil is in use. (Refer to LO 9-2320-273-12.) |
| Step 3.                        | Check engine for external oil leaks with engine running.                                                |
|                                | Refer to Direct Support Maintenance for repair of oil leaks.                                            |
| 6. INTERMITTENT LOSS OF POWER: |                                                                                                         |
| Step 1.                        | Refer to steps 1, 3 and 4 of Malfunction 2.                                                             |
| Step 2.                        | Check fuel tank air vent.                                                                               |
|                                | Remove air vent (refer to para 4-23); then clean.                                                       |
| Step 3.                        | Refer to step 6 of Malfunction 2.                                                                       |
|                                | Refer to Direct Support Maintenance.                                                                    |
| 7. SUDDEN LOSS OF POWER:       |                                                                                                         |
| Step 1.                        | Check fuel level in tank.                                                                               |
| Step 2.                        | Check for exhaust restriction.                                                                          |
|                                | a. Check for loose baffles. Replace muffler if damaged (para 4-37).                                     |
|                                | b. Check for damaged exhaust stack. Replace.                                                            |
| Step 3.                        | Check for dirty fuel filter.                                                                            |
|                                | Service fuel filter (para 4-18).                                                                        |
| Step 4.                        | Check for leaking fuel lines.                                                                           |
|                                | Tighten connections or replace fuel lines as required (para 4-20).                                      |
| Step 5.                        | Check for air cleaner element restriction.                                                              |
|                                | Service air cleaner element as necessary (para 4-24).                                                   |
| Step 6.                        | Check for congealed fuel (cold weather).                                                                |
|                                | Check fuel specification (refer to TM 9-2320-273-10).                                                   |

**Table 4-1. Engine and Engine Systems Troubleshooting (Continued).**

| MALFUNCTION.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| TEST OR INSPECTION.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| CORRECTIVE ACTION.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p>8. GRADUAL LOSS OF POWER, NO SMOKE:</p> <p>Step 1. Check for leaking fuel lines.</p> <p style="padding-left: 40px;">Tighten connections or replace fuel lines as required (para 4-20).</p> <p>Step 2. Check for air intake restriction.</p> <p style="padding-left: 40px;">Service air intake as necessary (para 4-25).</p> <p>Step 3. Check for worn accelerator rod linkage.</p> <p style="padding-left: 40px;">Adjust and replace worn parts (para 4-21).</p> <p>Step 4. Check for congealed fuel (cold weather).</p> <p style="padding-left: 40px;">Check fuel specification (refer to TM 9-2320-273-10).</p> <p>9. SLOW DECELERATION, ENGINE "FLOATS":</p> <p style="padding-left: 40px;">Check for air leaks in fuel pump supply lines.</p> <p style="padding-left: 40px;">Service supply lines as necessary (para 4-20).</p> <p>10. ERRATIC IDLE SPEED:</p> <p style="padding-left: 40px;">Check for air leaks in fuel pump supply lines.</p> <p style="padding-left: 40px;">Service supply lines as necessary (para 4-20).</p> <p>11. EXCESSIVE EXHAUST SMOKE DURING ACCELERATION:</p> <p>Step 1. Check for dirty fuel filter.</p> <p style="padding-left: 40px;">Service fuel filter (para 4-18).</p> <p>Step 2. Check for air crossover tube leaks (para 4-28).</p> <p style="padding-left: 40px;">a. Repair air crossover tube leaks (para 4-28).</p> <p style="padding-left: 40px;">b. Refer to Direct Support Maintenance.</p> <p>12. EXCESSIVE EXHAUST SMOKE THROUGHOUT SPEED RANGE:</p> <p>Step 1. Check for dirty air cleaner element.</p> <p style="padding-left: 40px;">Clean or replace element (para 4-24).</p> <p>Step 2. Check for poor quality fuel.</p> <p style="padding-left: 40px;">a. Check fuel specification. (Refer to TM 9-2320-273-10).</p> <p style="padding-left: 40px;">b. Refer to Direct Support Maintenance.</p> <p>13. HIGH FUEL CONSUMPTION:</p> <p>Step 1. Check for poor quality fuel.</p> <p style="padding-left: 40px;">a. Check fuel specification refer to TM 9-2320-273-10).</p> <p style="padding-left: 40px;">b. Notify Direct Support Maintenance.</p> |

**Table 4-1. Engine and Engine Systems Troubleshooting (Continued).**

| MALFUNCTION.                 |                                                                                                                                                                                                                                         |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TEST OR INSPECTION.          |                                                                                                                                                                                                                                         |
| CORRECTIVE ACTION.           |                                                                                                                                                                                                                                         |
| 14. LOW OIL PRESSURE:        |                                                                                                                                                                                                                                         |
| Step 1.                      | Check oil level.<br>Fill to proper level (Refer to Lubrication Order LO 9-2320-273-12).                                                                                                                                                 |
| Step 2.                      | Check filter.<br>Replace filter (para 4-14).                                                                                                                                                                                            |
| Step 3.                      | Check for defective oil pressure gage.<br>Test pressure with a gage that is known to be good (para 5-59). If test gage indicates correct pressure, replace gage. If low or no pressure is indicated, notify Direct Support Maintenance. |
| 15. NO CAB HEAT:             |                                                                                                                                                                                                                                         |
| Step 1.                      | Check for closed heater water control valve.<br>Open valve (para 4-50).                                                                                                                                                                 |
| Step 2.                      | Check for air in heater.<br>Bleed air from heater (para 4-50).                                                                                                                                                                          |
| Step 3.                      | Check for low coolant level.<br>Fill to proper level and check for leaks (para 4-42).                                                                                                                                                   |
| Step 4.                      | Check thermostat and thermal control (engine running cold).<br>Replace thermostat (para 4-43).                                                                                                                                          |
| 16. EXCESSIVE EXHAUST NOISE: |                                                                                                                                                                                                                                         |
| Step 1.                      | Check for defective exhaust pipe or gasket(s).<br>Replace defective item (para 4-34 thru 4-38, as applicable).                                                                                                                          |
| Step 2.                      | Check for defective muffler.<br>Replace muffler (para 4-37).                                                                                                                                                                            |
| 17. EXHAUST FUMES IN CAB:    |                                                                                                                                                                                                                                         |
|                              | Check for loose or defective manifold or leaks in pipes.<br>Replace pipe (para 4-34 thru 4-38, as applicable) or refer to Direct Support Maintenance if manifold is defective.                                                          |
| 18. ENGINE OVERHEATS:        |                                                                                                                                                                                                                                         |
| Step 1.                      | Check coolant level.<br>Add coolant until sight glass is full.                                                                                                                                                                          |

## Section III MAINTENANCE PROCEDURES

---

### 4-6. INTRODUCTION

This section provides Organizational Level maintenance procedures for the engine and engine systems. To find a specific maintenance procedure, see one of the following lists of task summaries:

- a.* Engine Oil System Maintenance (para 4-7).
- b.* Fuel and Air Intake System Maintenance (para 4-8).
- c.* Engine Retarder Brake Maintenance (para 4-9).
- d.* Ether Quick-Start System Maintenance (para 4-10).
- e.* Exhaust System Maintenance (para 4-11).
- f.* Cooling System Maintenance (para 4-12).
- g.* Alternator Drive System Maintenance (para 4-13).

| 4-7. ENGINE OIL SYSTEM MAINTENANCE TASK SUMMARY.         |                                        |                                            |                              |
|----------------------------------------------------------|----------------------------------------|--------------------------------------------|------------------------------|
| <u>INITIAL SETUP</u><br><u>APPLICABLE CONFIGURATIONS</u> |                                        | <u>EQUIPMENT</u><br><u>CONDITION PARA.</u> | <u>CONDITION DESCRIPTION</u> |
| All.                                                     |                                        | 11-14A or C.                               | Left Front Fender Removed.   |
| <u>TEST EQUIPMENT</u>                                    |                                        |                                            |                              |
| None.                                                    |                                        |                                            |                              |
| <u>SPECIAL TOOLS</u>                                     |                                        |                                            |                              |
| None.                                                    |                                        |                                            |                              |
| <u>MATERIALS/PARTS (P/N)</u>                             |                                        |                                            |                              |
| Oil, 40 qts (Refer to Appendix C).                       |                                        |                                            |                              |
| Containers, Five Gallon (3).                             |                                        |                                            |                              |

**4-9. ENGINE RETARDER BRAKE MAINTENANCE TASK SUMMARY.****INITIAL SETUP****APPLICABLE CONFIGURATIONS**

All.

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

Dry cleaning solvent (Refer to Appendix C).  
 Crossover tube gasket (center cover only) (216487).  
 Gasket, rocker arm housing (3009999).

**EQUIPMENT****CONDITION PARA**

4-15A.  
 4-27A.  
 4-28A&B.

**CONDITION DESCRIPTION**

Breather tube removed.  
 Turbo air inlet removed.  
 Rocker arm housing covers removed.

**PERSONNEL REQUIRED**

One, or two (MOS-63B20).

**REFERENCES (TM)**

TM9-2320-273-10.  
 TM9-2320-273-20P.

**REFERENCES (TROUBLESHOOTING)**

Table 5-4.

**SPECIAL ENVIRONMENTAL CONDITIONS**

Work area must be clean, as dirt in the turbocharger and engine can cause damage.  
 Vehicle parked on level ground.

**GENERAL SAFETY INSTRUCTIONS**

Engine off; transmission in neutral.  
 Park brake set.

**LIST OF TASKS**

**CONDITION DESCRIPTION**

Upper fan shroud removed.  
 Coolant drained.  
 Water pump belt removed.  
 Fan clutch "actuator removed.  
 Air cleaner removed.  
 Upper shroud & fan removed.  
 Fan removed.  
 Fan belts removed.  
 Transmission oil cooler hoses removed.  
 Water temperature switch wire removed.  
 Turbo air inlet removed  
 Hood removed  
 Brush guard removed (M916/M920).  
 Grille removed.  
 Steering pump cooler hoses removed.

**SPECIAL ENVIRONMENTAL CONDITIONS**

Vehicle parked on level ground.

**GENERAL SAFETY INSTRUCTIONS**

Engine off; transmission in neutral.  
 Park brake set.

| <p>The diagram illustrates the assembly of the engine oil service system. It includes an exploded view of the bypass filter element (8) and its mounting (23), showing the various bolts, washers, and clamps required for installation. A separate view shows the filter adapter (29) and primary filter (30) connected to the pump line (20) and sump line (21).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                    |                    |                |              |              |              |                    |              |           |                    |               |          |             |            |                 |               |             |                  |            |                  |                      |               |                    |                  |               |          |         |               |                    |                      |           |                    |              |               |                |             |           |              |             |               |  |

|  <p>The diagram illustrates the assembly of a fuel filter screen. On the left, a fuel pump is shown with a curved arrow pointing to the filter assembly. The assembly consists of four numbered components: 1. Filter Screen, 2. Cap Seal Ring, 3. Filter Spring, and 4. Fuel Filter Screen Assembly. The components are shown in a disassembled state, with the filter screen (1) being inserted into the cap seal ring (2), which is then secured by the filter spring (3) and the fuel filter screen assembly (4).</p> |        |         |

## FUEL AND AIR INTAKE SYSTEM.

## 4-21. ACCELERATOR PEDAL AND ROD MAINTENANCE (Continued).

## LOCATION/ITEM

## ACTION

## REMARKS

## NOTE

Any time you repair or replace a part in this system, check that idle speed is correct (part C).

**A. REMOVAL.**

1. Cotter pins (1) and (4).

Remove and pull out clevis pin (3) and straight pin (7); lift out pedal (2).

Discard cotter pins (1) and (4).

## FUEL AND AIR INTAKE SYSTEM.

#### 4-22. HAND THROTTLE LINKAGE MAINTENANCE.

**THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)**

- a.. Removal. (20)
- b. Cleaning and Inspection. ( 5)
- c. Installation. (30)
- d. Checking Idle Speed. ( 2)

57 Minutes Total.

## INITIAL SETUP

## APPLICABLE CONFIGURATIONS

All.

## TEST EQUIPMENT

None.

## SPECIAL TOOLS

None.

### MATERIALS/PARTS (P/N)

None.

### EQUIPMENT CONDITION

**PARAGRAPH**

None.

### CONDITION DESCRIPTION

None.

**PERSONNEL REQUIRED**

One (MOS-63B20).

### SPECIAL ENVIRONMENTAL CONDITIONS

Vehicle on Level Ground.

**INITIAL SETUP****APPLICABLE CONFIGURATIONS**

All.

**EQUIPMENT CONDITION****PARAGRAPH**

None.

**CONDITION DESCRIPTION**

None.

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

SD-2 Dry Cleaning Solvent (Refer to Appendix C).  
 Containers for Fuel (AR).  
 Masking Tape.  
 Marking Pencil.

**PERSONNEL REQUIRED**

Three (MOS-63B20).

**SPECIAL ENVIRONMENTAL CONDITIONS**

Work in Well Ventilated Area.  
 Vehicle Parked on Level Ground.

**REFERENCES (TM)**

TM 9-2320-273-10.  
 TM 9-2320-273-20P.

**GENERAL SAFETY INSTRUCTIONS**

Engine Off; Transmission in Neutral.  
 Park Brake Set.

## FUEL AND AIR INTAKE SYSTEM.

## 4-23. FUEL TANK MAINTENANCE (Continued).

## LOCATION/ITEM

## ACTION

## REMARKS

## CAUTION

Be sure that tank is supported so that it will not fall when straps (26) are removed.

## A. REMOVAL.

## NOTE

Place container under drain plug (28) to catch fuel.

**ENGINE RETARDER BRAKE****4-28. ROCKER ARM HOUSING COVERS MAINTENANCE.****THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)**

Removal of Crossover Tube. (5)  
 Removal of Cover. (5)  
 Cleaning. (20)  
 Installation of Cover. (5)  
 Installation of Crossover Tube (5)  
40 Minutes Total.

**INITIAL SETUP****APPLICABLE CONFIGURATIONS**

All.

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

Dry Cleaning Solvent (Refer to Appendix C).  
 Gasket for Crossover Tube  
 (Center Cover Only.) (216487).  
 Gasket for Rocker Arm Housing  
 (3009999).

**EQUIPMENT CONDITION  
PARAGRAPH**

4-15A.  
 4-27A.

**CONDITION DESCRIPTION**

Breather Tube Removed  
 (For Center Cover Only).  
 Turbo Air Inlet Removed.

**PERSONNEL REQUIRED**

One (MOS-63B20).

**REFERENCES (TM)**

TM 9-2320-273-20P.

**SPECIAL ENVIRONMENTAL CONDITIONS**

Work Area Must be Clean as Dirt in the Turbocharger  
 and Engine Can Cause Damage.  
 Vehicle Parked on Level Ground.

**GENERAL SAFETY INSTRUCTIONS**

Engine OFF.  
 Transmission in Neutral.  
 Park Brake Set.

**TROUBLESHOOTING REFERENCES**

Table 5-4.

| <div>WARNING</div> <p>During normal operation the turbocharger and outlet pipe can become very hot. Be careful not to touch these components with your bare hands. These components may be hot enough to cause serious burns.</p> <div>CAUTION</div> <p>You will be operating the engine with cover removed. Be absolutely certain that work area is clean and dust-free. Do not allow dirt, tools, or engine parts to fall into engine.</p>  <p>The diagram shows a perspective view of the engine retarder assembly. Callout 1 points to the armatures inside the housing. Callout 2 points to the pedal lever. Callout 3 points to the switch mechanism at the base of the pedal.</p> |        |           |

# ETHER QUICK-START SYSTEM

#### 4-30. ETHER CYLINDER MAINTENANCE.

**THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)**

- a. Removal. (5)
- b. Installation. (10)
- c. Check Operation. ( 5)

20 Minutes Total.

## INITIAL SETUP

## APPLICABLE CONFIGURATIONS

All.

## TEST EQUIPMENT

None.

## SPECIAL TOOLS

None.

### MATERIALS/PARTS (P/N)

Ether Cylinder (2910-01-072-1783).

EQUIPMENT CONDITION  
PARAGRAPH

None.

### CONDITION DESCRIPTION

None.

## PERSONNEL REQUIRED

Two (MOS-63B20).  
(2nd Mechanic Operates  
Cab Control in Part C).  
REFERENCES (TM)  
TM 9-2320-273-20P.

## SPECIAL ENVIRONMENTAL CONDITIONS

1. Coolant Temperature Must be Below 50°F or Either Solenoid Valve Will Not Function.
2. Work in a Well Ventilated Area Away From Sparks or Flame.
3. Vehicle Parked on Level Ground.

## GENERAL SAFETY INSTRUCTIONS

Ether is Highly Explosive.  
Be Alert for the Strong Odor of Spilled Ether.  
Guard Against Flame or Sparks in Work Area.  
Engine OFF.  
Transmission in Neutral.  
Park Brake Set.

## TROUBLESHOOTING REFERENCES

Table 5-3.

**ETHER QUICK-START SYSTEM.****4-30. ETHER CYLINDER MAINTENANCE (Continued).****LOCATION/ITEM****ACTION****REMARKS****WARNING**

Ether is highly explosive. Dispose of cylinder properly. Be alert for the strong odor of spilled ether. Guard against flame or sparks in work area.

**A. REMOVAL.**

1. Clamp (4).

Loosen.

2. Ether cylinder (1).

Unscrew from fitting (5) and lift out.

It may be necessary to hold fitting (5) with open-end wrench.

**NOTE**

Check neck of cylinder for dirt or lint prior to installation.

**B. INSTALLATION.**

3. Ether cylinder (1).

Screw into fitting (5).

4. Clamp (4).

Tighten.

**INITIAL SETUP****APPLICABLE CONFIGURATIONS**

All.

**EQUIPMENT CONDITION****PARAGRAPH**

None.

**CONDITION DESCRIPTION**

None.

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

Atomizer, 91302406 (06991)

**PERSONNEL REQUIRED**

Two (MOS-63B20).  
 (2nd Mechanic Operates Cab  
 Controls in Part B.)

**REFERENCES (TM)**

None.

**SPECIAL ENVIRONMENTAL CONDITIONS**

Coolant Temperature Must Be Below 50°F or Ether  
 Solenoid Valve Will Not Function.  
 Work in a Well Ventilated Area Away from Sparks or Flame.

Vehicle Parked on Level Ground.

**GENERAL SAFETY INSTRUCTIONS**

Ether is Highly Explosive.  
 Be Alert for the Strong Odor of Spilled Ether.  
 Guard Against Flame or Sparks in Work Area.  
 Engine OFF: Transmission in Neutral.  
 Park Brake Set.

## ETHER QUICK-START MAINTENANCE.

#### 4-33. ETHER TUBE MAINTENANCE.

**THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)**

- a. Removal. (10)  
b. Inspection. ( 5)  
c. Installation. (10)  
d. Operational Check. (5)
- 30 Minutes Total.

## INITIAL SETUP

## APPLICABLE CONFIGURATIONS

All.

## TEST EQUIPMENT

None.

## SPECIAL TOOLS

None.

### MATERIALS/PARTS (P/N)

Liquid Teflon (Refer to Appendix C).

## EQUIPMENT CONDITION

## PARAGRAPH

None.

### CONDITION DESCRIPTION

None.

## PERSONNEL REQUIRED

Two (MOS-63B20).  
(2nd Mechanic Operates Cab Controls in Part D.)

## REFERENCES (TM)

None.

## TROUBLESHOOTING REFERENCES

Table 5-3.

## SPECIAL ENVIRONMENTAL CONDITIONS

**Coolant Temperature Must be Below 50°F  
or Ether Solenoid Valve Will Not Function.  
Work in a Well Ventilated Area Away From Sparks or Flame.  
Vehicle Parked on Level Ground.**

## GENERAL SAFETY INSTRUCTIONS

Ether is Highly Explosive. Be Alert for the Strong Odor of Spilled Ether. Guard Against Flame or Sparks in Work Area. Engine OFF.  
Transmission in Neutral.  
Park Brake Set.

## ETHER QUICK-START SYSTEM.

## 4-33. ETHER TUBE MAINTENANCE (Continued).

## EXHAUST SYSTEM.

## 4-34. TURBO OUTLET PIPE MAINTENANCE (Continued).

## LOCATION/ITEM

## ACTION

## REMARKS

## WARNING

During normal operation, the exhaust pipes and muffler can become very hot. Be careful not to touch these components with your bare hands. Do not allow your body to come in contact with the hot pipes or muffler. Exhaust system components may be hot enough to cause serious burns.

|  <p>The diagram illustrates the maintenance of an exhaust system, specifically the installation of a flex tube. It shows a vertical section of the exhaust system with a muffler (1) at the top. Below the muffler, a coupling nut (2) and a coupling (3) are used to connect two flex pipes (3 and 6). The muffler inlet pipe (5) is shown below the coupling. A turbocharger (7) is shown on the left, with its outlet pipe (8) connecting to the flex pipe (6). Arrows indicate the flow of exhaust from the turbocharger through the flex pipes and muffler.</p> |        |         |

| <p>The diagram illustrates the installation of a flex pipe bracket. At the top, a side profile of a truck chassis shows the location of the exhaust system. Below it, a detailed exploded view shows the components being installed. A curved flex pipe (1) is connected to a coupling nut (18). This assembly is mounted onto a bracket (4) which is secured with bracket bolts (3) and bracket nuts (2). The bracket is then attached to a horizontal muffler inlet pipe (10) using U-clamps (9), spacers (8), and U-clamp nuts (7). Other components shown include couplings (6), U-clamps (11), and various spacers (12).</p> <p>LEGEND:</p> <ol style="list-style-type: none"> <li>1. FLEX PIPE</li> <li>2. BRACKET NUT (2)</li> <li>3. **COOLING SYSTEM.****4-40. RADIATOR MAINTENANCE.****THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)**

- a. Removal. (25)  
 b. Installation. (30)  
 55 Minutes Total.

**INITIAL SETUP****APPLICABLE CONFIGURATIONS**

All,

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

Insulators (2) CBA 24-500 (76005).  
 Liquid Teflon (refer to appendix C).

**EQUIPMENT CONDITION****PARAGRAPH**

4-42A.

11-32A.

11-16E.

11-16A.

10-22A.

6-10A.

**CONDITION DESCRIPTION**

Drain Coolant.  
 Hood Removed,  
 Brush Guard Removed  
 (M916 thru M920).  
 Grille Removed.  
 Steering Pump Cooler Hoses  
 Removed.  
 Transmission Oil Cooler  
 Hoses Removed.

**PERSONNEL REQUIRED**

Two (MOS-63B20).

**SPECIAL ENVIRONMENTAL CONDITIONS**

Vehicle Parked on Level Ground.

**REFERENCES (TM)**

TM 9-2320-273-20P.

**GENERAL SAFETY INSTRUCTIONS**

Engine OFF.  
 Transmission in Neutral.  
 Park Brake Set.

|  <p>The diagram illustrates the fan clutch and belt assembly. It shows a large pulley (7) at the bottom, connected by two belts (6) to a smaller pulley (8) at the top. The pulley (8) is part of a fan clutch assembly (8). Various bolts (1), lockwashers (2), and flat washers (9) are used to secure the assembly. An actuator outlet line (3) is connected to the top of the assembly. An adjusting screw (4) and a locknut (5) are used to adjust the tension of the belts. A fan lockup screw (10) is also shown.</p> <p>LEGEND:</p> <ul style="list-style-type: none"> <li>1. MACHINE BOLT (3)</li> <li>2. LOCKWASHER (3)</li> <li>3. ACTUATOR OUTLET LINE</li> <li>4. TA 074674

**COOLING SYSTEM.**

**4-47. FAN CLUTCH ACTUATOR AND VALVE MAINTENANCE (M919).**

**THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)**

- a. Removal. (15)
- b. Insection of Air Tubes. ( 5)
- c. Installation. (15)
- d. Operational Check. (10)

40 Minutes Total.

**INITIAL SETUP**

**APPLICABLE CONFIGURATIONS**

M919.

**EQUIPMENT CONDITION  
PARAGRAPH**

4-42A.

**CONDITION DESCRIPTION**

Coolant Drained Below Fan  
Clutch Actuator Level.

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

Liquid Teflon (refer to appendix C).

**PERSONNEL REQUIRED**

One (MOS-63B20).

**SPECIAL ENVIRONMENTAL CONDITIONS**

Vehicle Parked on Level Ground.

**REFERENCE (TM)**

TM 9-2320-273-10.  
TM 9-2320-273-20P.

**GENERAL SAFETY INSTRUCTIONS**

Engine Off.  
Transmission in Neutral.  
Park Brake Set.  
Fan Clutch May Engage at Any Time Engine  
is Running.

**TROUBLESHOOTING REFERENCES**

Table 4-1.

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|---------|
|  <p>The diagram illustrates the components of a water pump belt system. It shows an idler pulley (7) at the top, which guides an idler belt (4). The belt (4) is connected to an accessory drive (5) and a water pump relay (6). An adjusting screw (1) and locknut (2) are used to adjust the tension of the belt. A washer (3) is also shown as part of the adjustment mechanism.</p> |        |         |

The diagram is an exploded view of a cooling system component, specifically the 'Water Man I Fold Maintenance' assembly. It shows the following components and their assembly relationships:

- Top Section:** Includes the heater hose (2), return hose (3), deaeration line (4), radiator hose (5), and thermostat housing (6). These are connected to the front manifold (10) via various hoses and a transfer tube (9).
- Manifolds and Connections:** The front manifold (10) is connected to the rear manifold (32) and the center manifold (31). The rear manifold (32) is connected to the engine block (33). The center manifold (31) is connected to the water pump (25) and the water transfer connection (18).
- Fasteners and Seals:** Numerous capscrews (1, 12, 13, 15, 20, 22, 25, 26), washers (11, 14, 26), gaskets (19, 24, 27), and O-rings (29) are shown in their respective assembly positions.
- Other Components:** The diagram also shows the air compressor line (7), a hose (8), a connector (16), a hose nipple (17), a bracket (21), and a coupling (30).

| <b>C. INSTALLATION (Continued).</b>                                                           |                                                                      |                                   |
| 15. Front manifold (10), and two new sealing rings (28).                                      | Place in position on engine block (33).                              |                                   |
| 16. Four capscrews (12) and washers (11).                                                     | Screw on finger tight.                                               |                                   |
| 17. Coupling (30), two new O-rings (29), center manifold (31) and two new sealing rings (28). | Place in position against front manifold (10) and engine block (33). |                                   |
| 18. Four capscrews (12) and washers (11).                                                     | Screw on finger tight.                                               |                                   |
| 19. Rear manifold (32), two new O-rings (29), coupling (30), and two new sealing rings (28)   | Place in position on engine block (33) against center manifold (31). |                                   |
| 20. Four capscrews (12) and washers (11).                                                     | Screw on finger tight.                                               |                                   |
| 21. Twelve capscrews (12).                                                                    | Tighten to 35 lb-ft (47 N-m) with torque wrench.                     | Alternate to tighten down evenly. |
| 22. New gasket (27) and thermostat housing (6).                                               | Set in place.                                                        |                                   |
| 23. Four capscrews (25) and washers (26).                                                     | Install and tighten.                                                 |                                   |
| 24. Deaeration line (4) and heater hose (2).                                                  | Screw into front manifold (10).                                      |                                   |
| 25. Air compressor line (7).                                                                  | Install and tighten.                                                 |                                   |
| 26. Return hose (3), radiator hose (5) and hose (8).                                          | Attach to front manifold (10) and tighten clamps.                    |                                   |
| 27. Transfer tube (9).                                                                        | Install to front manifold (10) with capscrew (1).                    |                                   |

## COOLING SYSTEM.

## 4-52. WATER MANIFOLD MAINTENANCE (Continued).

## LOCATION/ITEM

## ACTION

## REMARKS

## NOTE

Follow on maintenance required:

Install water temperature switch wire; refer to paragraph 5-73B.

Install fan clutch actuator; refer to paragraph 4-46C.

Install air cleaner and turbocharger air intake; refer to paragraph 4-25D & 4-27C.

Refill cooling system and check for leaks; refer to paragraph 4-42C & D.

| LOCATION/ITEM                      | ACTION             | REMARKS |
|------------------------------------|--------------------|---------|
| A. REMOVAL.                        |                    |         |
| 1. Nut (3) and washer (2).         | Loosen and remove. |         |
| 2. Idler belt adjusting screw (1). | Remove.            |         |
| 3. Idler pulley (4).               | Remove.            |         |

The diagram illustrates the idler pulley assembly. A belt (5) is shown passing over a large pulley and then under a smaller idler pulley (4). The idler pulley is mounted on a bracket. An adjusting screw (1) is used to adjust the tension of the belt. A washer (2) and a nut (3) are also shown, which are part of the adjustment mechanism.

TA 074688

**ALTERNATOR DRIVE SYSTEM.****4-55. ALTERNATOR BELTS MAINTENANCE (Continued),****LOCATION/ITEM****ACTION****REMARKS****B. INSTALLATION.**

5. Alternator belts (5).

- a. Put onto alternator pulley (7) and vibration damper (4),
- b. Push alternator away from engine until belts stop the travel of alternator.

Do not pry on with screwdriver. Always replace belts as a set. Never put on just one new belt.

**C. ADJUSTMENT.**

6. Adjusting nut (2).

Tighten against adjusting rod collar (10) until belt tension is 110 lbs for new belts, or 80 lbs for used belts.

A used belt is one that has been on the truck more than a thousand miles.

7. Jam nut (1)

Tighten against collar (10).

8. Adjusting nut (3).

Tighten against adjusting nut (2).

9. Alternator capscrews (6) and (9).

Torque to 30 lb-ft (41 N-m).

## CHAPTER 5

### ELECTRICAL AND INSTRUMENTATION SYSTEMS MAINTENANCE

---

#### **5-1. OVERVIEW.**

This chapter provides you with the following information related to electrical and instrumentation systems maintenance:

- a. All required special tools and equipment,
- b. Other technical manuals.
- c. Troubleshooting procedures.
- d. Maintenance procedures.

---

#### **Section I REPAIR PARTS, SPECIAL TOOLS, TMDE AND SUPPORT EQUIPMENT**

---

#### **5-2. COMMON TOOLS AND EQUIPMENT .**

For authorized common tools and equipment, refer to the Modified Table of Organization and Equipment (MTOE) applicable to your unit.

#### **5-3. SPECIAL TOOLS, TMDE, SUPPORT EQUIPMENT.**

The special tools, TMDE and support equipment required for the electrical and instrumentation maintenance procedures described in this chapter are limited to the test meters shown in para 5-6.

#### **5-4. SPARES AND REPAIR PARTS.**

Spares and repair parts are listed and illustrated in the Repair Parts and Special Tools List covering Organizational Maintenance for this equipment (TM 9-2320-273-20P).

---

## Section II TROUBLESHOOTING

---

---

### 5-5. INTRODUCTION.

---

a. *Scope.* This section contains detailed troubleshooting information for locating and correcting malfunctions in the electrical system. Each of the functional subsystems is treated separately by means of:

- (1) A physical and functional description.
- (2) A circuit schematic.
- (3) A brief overall subsystem check.
- (4) Step-by-step test to diagnose problems using authorized test equipment,

b. *Subsystem Circuits.* The functional subsystem circuits covered in this section are presented in the following sequence:

- (1) Battery (table 5-1 ).
- (2) Starting (table 5-2).
- (3) Ether Quick-Start Control (table 5-3).
- (4) Engine Retarder Control (table 5-4).
- (5) Battery Charging (table 5-5).
- (6) Warning Lamps and Alarms (table 5-6).
- (7) Instruments and Indicators (table 5-7).
- (8) Headlamps (table 5-8).
- (9) Marker Lamps (table 5-9).
- (10) Parking and Tail Lamps (table 5-10).
- (11) Stop and Turn Signal Lamps (table 5-11).
- (12) Backup Lamps (table 5-12).
- (13) Blackout Lighting System (table 5-13).
- (14) Miscellaneous Electrical (table 5-14).

c. *General Troubleshooting Procedures.* The following procedures are general "in nature and should be applied as appropriate during any electrical troubleshooting.

(1) *Research the problem.* Before you start detail troubleshooting procedures, review the wiring diagram and schematic (Appendix D) to thoroughly familiarize yourself with the circuit(s) involved. Analyze the symptoms and conditions and use common sense and logic to determine the most likely cause for the problem, then troubleshoot that circuit first. The more information you have concerning the problem, the easier it will be to troubleshoot.

**5-5. INTRODUCTION (Continued).**

(2) *General Approach.* First, isolate to the subsystem level (in cases where more than one subsystem is involved); next, isolate the problem to a single circuit within the subsystem; then isolate the problem to the faulty component. An example of an exception to this rule would be in cases where a lamp is out; the first step would be to check the bulb.

(3) *Wiring.* Frayed, broken, loose, or corroded wiring is a common source of problems in any electrical circuit. Always make a visual inspection before starting detail troubleshooting. Observe in particular, contacts to ground. Components with case grounds are especially troublesome.

(4) *Circuit Breakers.*

**CAUTION**

Never jumper a cycling circuit breaker unless specifically instructed to do so in the troubleshooting procedure. The overload could cause serious damage to equipment and result in a fire.

The circuit breakers in these circuits are the automatic recycling type. If an overload exists, the circuit breaker will open and shut off all circuits being fed by that particular circuit breaker. After cooling, the circuit breaker will close. If the problem still exists the circuit breaker will again open. This cycle will continue until the problem is corrected. When a circuit breaker is cycling, it will feel warm to the touch and you can hear a clicking sound.

(5) *Relays.* A relay is basically a two-element device – a coil and a set of contacts in a common housing. When voltage is applied to the coil, the contacts close (normally open relay) or open (normally closed relay). The relay provides a path of supply voltage to a circuit or component which draws a heavy current load. In troubleshooting, first be sure the coil is functioning. Connect a multi meter between frame ground and the hot side of the coil and check for 12 volts dc nominal. If voltage is present, disconnect the multi meter and measure voltage across any set of contacts with the coil voltage present. The meter should indicate either 12 or 24 volts dc nominal depending on the circuit involved. Sometimes it is advantageous to simply jumper across the relay contacts and if the inoperative circuit being checked works, a bad relay or voltage supply wiring is indicated.

## 5-6, TEST EQUIPMENT.

a. *Introduction.* In automotive troubleshooting, the Simpson 160, the TS-352B/U, and the AN/URM-105 will do the same job. Therefore, your automotive shop sets may contain any one of these multi meters (fig. 5-1). Any of these three multi meters can be used to troubleshoot the electrical system.

*Figure 5-1. Multimeters*

**5-6. TEST EQUIPMENT (Continued).**

*b. Using the Ohms Scale.* The Ohms Scale (fig. 5-2 thru fig. 5-4) is used to make tests for continuity, shorts, and resistance. The multi meter must be set up and "zeroed" before making these tests. Do the following steps that match the multi meter you have:

**Figure 5-2. Using the Ohms Scale and "Zeroing" Multimeter AN/URM-105**

**NOTE**

If needle will not "zero," replace the batteries.  
If the needle still will not "zero" after replacing the batteries, turn the meter in for repair.

## 5-6. TEST EQUIPMENT (Continued).

**Figure 5-3. Using Ohms Scale and "Zeroing" Multimeter TS-352 B/U**

### NOTE

If needle will not "zero", replace the batteries. If the needle will not "zero" after replacing the batteries, turn the meter in for repair.

## 5-6. TEST EQUIPMENT (Continued).

### SIMPSON 160

- (1) Set selector switch on "RX1".
- (2) Put black probe in "COM-" jack.
- (3) Put red probe in "+" jack.
- (4) Now "zero" the meter. While touching the probes together, turn "ADJ" knob until needle is over the "0" on the top scale.

**Figure 5-4. Using Ohms Scale and "Zeroing" Multimeter Simpson 160**

### NOTE

If the needle will not "zero", replace the batteries. If the needle still will not "zero" after replacing the batteries, turn the meter in for repair.

**5-6. TEST EQUIPMENT (Continued).**

c. *Continuity Tests.* Continuity tests are made to check for breaks in a circuit (such as the switch, light bulb, or electrical cable illustrated). To make a continuity check (Fig. 5-5), do the following steps:

CAUTION

Failure to perform the following step can damage the multimeter.

- (1) Disconnect the circuit being tested. To be safe, disconnect the battery ground strap.
- (2) Set up and "zero" the multimeter.

(3) Connect the meter probes to both terminals of the circuit being tested. (The TS-352B/U is illustrated below, but the probes are connected to the circuit the same way with each of the three multi meters.)

**Figure 5-5. Making a Continuity Check**

- (4) Look at the meter needle.
  - (a) If the needle swings to the far right over the "O" on the top scale (on all three multimeters), the circuit has continuity.
  - (b) If the needle doesn't move, the circuit is open (broken).
  - (c) If the needle jumps or flickers, there is a loose connection in the circuit being tested.

TA 074694

**5-6. TEST EQUIPMENT (Continued).**

d. *Testing for Shorts.* A short (or short circuit) occurs when two circuits that should not be connected have metal-to-metal contact with each other. A short also occurs when a circuit that should not touch ground has metal-to-metal contact with ground. To check for shorts, do the following steps:

**CAUTION**

Failure to do the following step can damage the multimeter.

- (1) Disconnect the circuit being tested. To be safe, disconnect the battery ground cable.
- (2) Set UP and "zero" the multimeter (para b.).
- (3) With any of the three multimeters, connect one probe to one circuit and the other probe to the other circuit or ground (if checking for a short to ground). Figure 5-6 shows a check to see if wire "A" is shorted to wire "B" in the wiring harness.

**Figure 5-6. Testing for Shorts**

- (4) Look at the needle.
    - (a) If the needle swings to the far right over the "O" on the top scale (on all three multi meters), the circuits are shorted.
    - (b) If the needle doesn't move, the circuits are not shorted.
    - (c) If needle jumps or flickers, the circuits are occasionally shorted.
- e. *Testing Resistance.* To measure resistance in a circuit do the following steps.

**CAUTION**

Failure to do the following step can damage the multimeter.

**5-6. TEST EQUIPMENT (continued).**

- (1) Disconnect the circuit being tested. To be safe, disconnect the battery ground cable.
- (2) Set up and “zero” the multimeter (para b).
- (3) If the test in this manual calls for an “Ohms Range” different than “RX” or “XI,” set the selector switch to that range (like “RX10” or “X10”).

**NOTE**

“ZERO” the meter whenever you change ranges.

- (4) With any of the three multimeters, connect the probes across the circuit or item to be measured. Figure 5-7 below shows measuring the resistance of a temperature sending unit:

Figure 5-7. Testing Resistance

- (5) Read the meter. If the meter switch is on the “RX1” or “X1” range, the reading is taken directly from the top scale. If the meter switch is on a different range, (fig. 5-8), multiply the reading on the scale according to the table below.

| OHMS SWITCH SETTING. | YOU DO!                     |
|----------------------|-----------------------------|
| X1 or RX1.           | READ NUMBER ON SCALE.       |
| X10 OR RX10          | MULTIPLY READING BY 10.     |
| X100 OR RX 100.      | MULTIPLY READING BY 100.    |
| X1K OR RX1K.         | MULTIPLY READING BY 1000.   |
| X10K OR RX10K.       | MULTIPLY READING BY 10,000. |
| (REMEMBER: K = 1000) |                             |

Figure 5-8. Ohms Switch Settings

## 5-6. TEST EQUIPMENT (Continued).

For example, the meters in fig, 5-9 below show the following readings:

| OHMS SWITCH SETTING. | READING.  |
|----------------------|-----------|
| X1 OR RX1.           | 4 OHMS.   |
| X10 OR RX10.         | 40 OHMS.  |
| X100 OR RX100.       | 400 OHMS. |

SIMPSON 160

Figure 5-9. OHMS Switch Settings

f. Using the DC Volts Scale. The dc volts scale is used to measure all voltages in the electrical system.

Before using the multi meter to measure dc voltage, do the following steps that match the multi-meter you have (fig. 5-10 thru fig. 5-12).

### (7) AN/URM-105

Set meter switch to dc volts range given in TM.. (To measure 24 volts dc, set switch on "100 DC VOLTS" range. )

Figure 5-10. Using the DC Volts Scale AN/URM-105

TA 074697

**5-6. TEST EQUIPMENT (Continued).**

(2) TS-352 B/U

- (a) Set FUNCTION switch (1) to DIRECT (range switch can be at any position).
- (b) Put black lead in "DC/\* AC/OHMS" jack (2).
- (c) To measure 24 volts dc, plug red lead into "50V" jack on left side of meter (3).  
(If measuring less than 10 volts dc, use "10V" jack, If measuring less than 2.5 volts dc, use "2.5V" jack.)

**Figure 5-11. Setting the Function Switch TS-352 B/U**

(3) SIMPSON 160

- (a) Connect black lead to COM- jack.
- (b) Connect red lead to+ jack.
- (c) To measure 24 volts dc, set selector switch to V/DC 50 position. (If measuring less than 10 volts dc, set selector switch to V/DC 10 position. If measuring less than 2.5 volts dc, set selector switch to V/DC 2.5 position. )

**Figure 5-12. Setting the Function Switch Simpson 160**

TA 074698

## 5-6. TEST EQUIPMENT (Continued).

will protect the meter.

g. *Measuring DC Voltage.* To measure dc volts (fig. 5-13), do the following steps:

- (1) Set up multimeter (see para f).

### NOTE

If you are not sure of the voltage to be measured on the vehicle, always start on the highest range shown in para f. This will protect the meter,

- (2) With any of the three multimeters, connect the red probe to the positive (+) side of the circuit and the black probe to the negative (-) side. The example below shows 24 volts dc being measured across the batteries.

Figure 5-13. Measuring DC Voltage

- (3) Read the meter. (Figures 5-14 thru 5-16 show how to read all three multi meters.) If the needle tries to move off scale to the left, reverse the probes on the circuit.

**5-6. TEST EQUIPMENT (Continued).**

(a) AN/URM-105

Read the upper, black, straight-lined portion of the AC and DC VOLTS scale for the range the selector switch is set at:

| SWITCH SETTING. | SCALE.                      |
|-----------------|-----------------------------|
| 1000 DC VOLTS.  | 0.10 (AND MULTIPLY BY 100). |
| 100 DC VOLTS.   | 0.10 (AND MULTIPLY BY 10).  |
| 10 DC VOLTS.    | 0.10.                       |
| 1 DC VOLT.      | 0.10 (AND MULTIPLY BY 10).  |

Thus the meter illustrated is showing the following readings:

| SWITCH SETTING. | READING.     |
|-----------------|--------------|
| 100 DC VOLTS.   | 20 VOLTS DC. |
| 10 DC VOLTS.    | 2 VOLTS DC.  |
| 1 DC VOLT.      | .2 VOLTS DC. |

**Figure 5-14. Reading DC Volts Scale AN/URM-105**

**5-6. TEST EQUIPMENT (Continued).**

(b) TS-352 B/U.

Read the DC volts scale for the range the red lead is plugged in at:

| RANGE. | SCALE.                    |
|--------|---------------------------|
| 50V.   | 0.5 (AND MULTIPLY BY 10). |
| 10V.   | 0.10.                     |
| 2.5V.  | 0.25.                     |

Thus the meter illustrated is showing the following readings:

| RANGE. | READING.     |
|--------|--------------|
| 50V.   | 20 VOLTS DC. |
| 10V.   | 4 VOLTS DC.  |
| 2.5V.  | 1 VOLT DC.   |

**Figure 5-15. Reading DC Volts Scale- TS-352 B/U**

(c) SIMPSON 160

Read the "DC VOLTS" scale for the range the selector switch is set at:

| SWITCH SETTING. | SCALE.                   |
|-----------------|--------------------------|
| V/DC 50.        | 0.50.                    |
| V/DC 10.        | 0.10.                    |
| V/DC 2.5.       | 0.25 (AND DIVIDE BY 10). |

Thus the meter illustrated is showing the following readings:

| SWITCH SETTING. | READING.     |
|-----------------|--------------|
| V/DC 50.        | 20 VOLTS DC. |
| V/DC 10.        | 4 VOLTS DC.  |
| V/DC 2.5.       | 1 VOLT DC.   |

**Figure 5-16. Reading DC Volts Scale - Simpson 160**

TA 074701

**5-7. BATTERY SYSTEM.**

*a Description.* Four 12-volt, heavy-duty, maintenance-free batteries, (fig. 5-1 7) are located in an enclosure in the right-hand frame rail under the cab. The batteries are connected in a series-parallel combination to provide 24 volts for engine starting plus trailer lighting, and 12 volts for operation of all of the electrical equipment on the vehicle. Water never needs to be added to the maintenance-free batteries. There are no vent plugs in the cover. The batteries are completely sealed except for a small vent hole in the side. The test indicator in the cover can be used to determine if the battery is charged to the proper level for testing.

**Figure 5-17. Battery System**

**5-7. BATTERY SYSTEM (Continued).**

*b. Test Indicator.* The test indicator is a built-in hydrometer in one cell which provides visual information for battery testing only. The test indicator will give correct indications only when the battery is relatively level and the top is clean. Under normal conditions, the indicator displays either green or dark to indicate readiness of battery for testing.

(1) *Green dot visible.* Any green appearance is interpreted as a green dot, which means the battery is ready for testing. On rare occasions following prolonged cranking, the green dot may still be visible. If this should occur, the battery needs charging.

(2) *Dark green (dot not visible).* The battery needs to be charged prior to testing. On rare occasions the test indicator may turn light yellow. In this case, the battery must be replaced and the vehicle charging system should be checked out.

**WARNING**

**Do not charge, test, or jump start a battery when a light yellow color appears in the test indicator as the battery may explode, squirt electrolyte from the vent hole, and/or damage the charging system of this vehicle.**

*c.* The negative terminals of the battery combination (fig. 5-18) are connected to the ground connector of the starting motor and from there to the engine, tractor frame, and cab (ground). The 24-volt cable of the battery combination is connected to the starting solenoid relay. When the relay contacts are closed, 24-volt power is routed to the starter motor. The 12-volt cable is connected to the alternator and to two circuit breakers for 12-volt distribution.

Table 5-1 Battery System Troubleshooting.

Table 5-1. Battery System Troubleshooting (Continued).

TA 074703

Figure 5-18. DC Voltage Tests

## 5-8. STARTING SYSTEM CIRCUIT.

a. *Description (fig. 5- 79).* The starting system consists of two sets of 12-volt batteries (connected in series/parallel to provide 24 volts for starting), a starter motor and solenoid, a starter relay, a neutral safety switch, a key switch (ENGINE RUN), and a start button. When the ENGINE RUN switch is turned ON, the fuel solenoid valve is opened and power is applied to one side of the ENGINE START switch. When the transmission ratio selector is in neutral (N) (closing the neutral safety switch), the starter relay is energized and 24 volts dc is applied to the starter solenoid coil. Starter solenoid contacts then close and apply 24 volts to the starter motor. When the engine starts, an overrunning clutch in the starter motor allows the motor to run free until the ENGINE RUN switch is released, thus removing 24-volt power from the starter motor.

b. *Troubleshooting the Starting System Circuits.* When you suspect a starting system circuit problem, perform the steps in table 5-2.

TA 074710

## 5-9. ETHER QUICK-START CONTROLS.

a. *Description (fig. 5-26).* The ether injection solenoid valve is opened to allow ether to flow from the storage canister into the intake manifold when the ETHER button is pushed and released and the ether temperature switch is closed (engine coolant temperature is less than 50°F (10°C).

b. *Troubleshooting* Perform the steps in table 5-3 to isolate faulty components of the ether quick-start controls.

TA 074711

## 5-10. ENGINE RETARDER CONTROLS.

a. *Description.* The engine retarder solenoid valves are applied by the foot switch as selected by the three-position ENGINE RETARDER switch (fig. 5-27). The operator must let up on the foot throttle to close the throttle position sensing switch.

b. *Troubleshooting the Engine Retarder Control.* Perform the steps in table 5-4 to isolate faulty components of the engine retarder circuit.

TA237220 ■

| 1    |                                                                                                                                                                                                                                                                                                                                                 | NO RETARDING ACTION.                                                                |                      |               |                                                |         |
|      | 1                                                                                                                                                                                                                                                                                                                                               | With ENGINE RUN switch on, check for voltage to retarder foot switch (circuit 52A). | 12 volts dc nominal. | Go to Step 2. | Check for faulty circuit breaker (para 5-5 C), |         |
|      | <p style="text-align: center;"><b>NOTE</b></p> <p>Before making the voltage checks described in steps 2 through 8, do the following:</p> <p>Apply parking brake.<br/>Check system air pressure.<br/>Activate transmission control group.<br/>Put transmission in gear.<br/>Press and hold engine retarder foot pedal during voltage checks.</p> |                                                                                     |                      |               |                                                |         |
|      | 2                                                                                                                                                                                                                                                                                                                                               | Check for voltage at circuit 52B terminal of foot retarder switch.                  | 12 volts dc nominal. | Go to Step 3  | Replace switch.                                |         |
|      | 3                                                                                                                                                                                                                                                                                                                                               | Check for voltage at circuit 52C terminal of transmission pressure switch.          | 12 volts dc nominal. | Go to Step 4  | Repair wiring between 52B and 52C.             |         |
|      | 4                                                                                                                                                                                                                                                                                                                                               | Check for voltage at circuit 52D terminal of transmission pressure switch.          | 12 volts dc nominal. | Go to Step 5  | Drain system air pressure and replace switch.  |         |
|      | 5                                                                                                                                                                                                                                                                                                                                               | Check for voltage at circuit 52E terminal of throttle position sensing switch.      | 12 volts dc nominal. | Go to Step 6  | Repair wiring (52D, 52E) or connection!        |         |
|      | 6                                                                                                                                                                                                                                                                                                                                               | Check for voltage at circuit 52F terminal of throttle position sensing switch.      | 12 volts dc nominal. | Go to Step 7  | Replace switch.                                |         |
|      | 7                                                                                                                                                                                                                                                                                                                                               | Check for voltage at circuit 52G terminal of panel ENGINE RETARDER switch.          | 12 volts dc nominal. | Go to Step 8  | Repair wiring (52F, 52G) or connection:        |         |

Table 5-4. Engine Retarder Control Circuit Troubleshooting (Continued).

| MALF | STEP | INSTRUCTION                                                                                                      | INDICATION           | YES                                  | NO                                            | REMARKS |
|------|------|------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------|-----------------------------------------------|---------|
|      | 1    | NO RETARDING ACTION (Continued).                                                                                 |                      |                                      |                                               |         |
|      | 8    | Check for voltage at circuit 52H and 52K terminals of panel ENGINE RETARDER switch with switch in HIGH position, | 12 volts dc nominal. | Go to Step 9.                        | Replace switch.                               |         |
|      | 9    | Check for voltage at each solenoid valve, circuits 52J, 52L and 52M.                                             | 12 volts dc nominal. | Refer to Direct Support Maintenance, | Repair wiring (52J, 52L, 52M) or connections. |         |

## 5-11. BATTERY CHARGING CIRCUIT.

a. *Description.* Charging of the batteries is accomplished by a 14-volt, 85-ampere, self-load limiting alternator with an integral transformer rectifier providing 24 volts for the cranking batteries and 12 volts for other vehicle electrical loads. This system uses two sets of 12-volt batteries in series to provide 24 volts for cranking. The cranking batteries are charged by the transformer rectifier unit, and as the load demand on these batteries is cranking only, the 15 amperes available from the transformer rectifier is more than sufficient for this application. As the cranking batteries become charged, the output current gradually drops to approximately one ampere when the terminal voltage of the battery reaches 13.8 volts (adjustable). The charging circuit is shown in figure 5-28.

## 5-12. WARNING LAMPS AND ALARMS .

a. *Description.* The following warning lamps and alarms are employed in this vehicle series:

- (1) ENGINE TEMPERATURE warning lamp.
- (2) ENGINE OIL LOW warning lamp.
- (3) LOW AIR PRESSURE warning lamp.
- (4) BACKUP ALARM (M916 THRU M920).

The ENGINE TEMPERATURE warning lamp is actuated when the water temperature sensing switch closes (at 225° F, 95°C) if the ignition switch is ON. The ENGINE OIL LOW warning lamp is actuated when the engine oil pressure sensing switch closes (at 5 psi, 100 kPa) if the ignition switch is ON. The LOW AIR PRESSURE warning lamp and buzzer are actuated when the low air switch closes (between 64 and 76 psi) if the ignition switch is ON. The backup alarm goes off when the backup switch is closed and the ignition switch is ON unless the manual backup alarm override switch is open. The circuits for these devices are shown in figure 5-29. Wire connection points and wire identification numbers are indicated.

|      |      |                              | c. Buzzer only works.                                                                                                                  | Replace the bulb (para 5-61).                           |                                    |                                |
| 4    |      | BACKUP ALARM IS INOPERATIVE. | d. Neither lamp nor buzzer operates.                                                                                                   | Troubleshoot wiring (refer to schematic in Appendix D). |                                    |                                |
|      |      |                              | NOTE                                                                                                                                   |                                                         |                                    |                                |
|      |      |                              | The compressed air system must be within normal operating pressures to actuate the backup switch.                                      |                                                         |                                    |                                |
|      | 1    |                              | Verify the backup alarm override switch is OFF, and the ENGINE RUN switch is ON. Place the ratio selector in one of the reverse gears. |                                                         |                                    |                                |
|      | 2    |                              | Check for voltage at the alarm with a multi meter.                                                                                     | 12 dc volts nominal.                                    | Go to Step 3.                      | Go to Step 4.                  |
|      | 3    |                              | Check ground at alarm for loose or dirty ground.                                                                                       | Bad ground.                                             | Repair ground.                     | Replace the alarm (para 5-78). |
|      | 4    |                              | Attach a test lead across the terminals on the backup switch.                                                                          | Alarm operates.                                         | Replace backup switch (para 5-77). | Go to Step 5.                  |
|      | 5    |                              | Attach a test lead across the terminals on the override switch,                                                                        | Alarm operates.                                         | Replace switch.                    | Go to Step 6.                  |
|      | 6    |                              | Troubleshoot wiring through circuit breaker. Refer to schematic in Appendix D.                                                         |                                                         |                                    |                                |

### **5-13. INSTRUMENTS AND INDICATORS.]**

*a. Description.* Electrically operated gages and indicators in the cab provide information for operation as follows:

- (1) PARK BRAKE lamp.
- (2) DIFFERENTIAL LOCKUP lamp.
- (3) FUEL LEVEL gage.
- (4) POWER TAKEOFF lamp.
- (5) WATER TEMP gage.
- (6) TRANS OIL TEMP gage.
- (7) OIL PRESSURE gage.
- (8) VOLTS meter.
- (9) TACHOGRAPH (clock).
- (10) LAMPS.

The circuits for these items are shown in figure 5-30. Wire connection points and wire identification numbers are indicated.

| 1    |      | DIFFERENTIAL LOCKUP LAMP INOPERATIVE.                                                                                      |                      |                                                                      |               |         |
|      | 1    | With differential lock-up control set to LOCK, and ENGINE RUN switch ON check for voltage to the lamp using a multi meter. | 12 volts dc nominal. | Check for good ground at bulb. (Replace bulb) (para 5-63).           | Go to Step 2. |         |
|      | 2    | Attach test lead across the differential lockup control terminals.                                                         | Lamp lights.         | Replace differential lockup control (para 5-83).                     | Go to Step 3. |         |
| 2    | 3    | Troubleshoot wiring. Refer to wire diagram and schematic in Appendix D.                                                    |                      |                                                                      |               |         |
|      |      | PARK BRAKE LAMP INOPERATIVE.                                                                                               |                      |                                                                      |               |         |
|      | 1    | With park brake applied and ENGINE RUN switch set to ON, use a multimeter to check voltage to the lamp.                    | 12 volts dc nominal. | Check for a good ground at the bulb. (Replace the bulb) (para 5-63). | Go to Step 2. |         |
|      | 2    | Attach test lead across park brake switch terminals (located in instrument panel near circuit breaker).                    | Lamp lights.         | Replace park brake switch (para 5-82).                               | Go to Step 3. |         |
|      | 3    | Troubleshoot wiring. Refer to wiring diagram and schematic in Appendix D.                                                  |                      |                                                                      |               |         |

Table 5-7. Instruments and Indicators Circuit Troubleshooting (Continued).

| MALF | STEP | INSTRUCTION                                                                | INDICATION           | YES                  | NO            | REMARKS |
|------|------|----------------------------------------------------------------------------|----------------------|----------------------|---------------|---------|
| 3    | 1    | INSTRUMENT PANEL GAGES INOPERATIVE.                                        |                      |                      |               |         |
|      |      | Check the following gages: Trans oil temp, water temp, oil press, fuel.    |                      |                      |               |         |
|      |      | a. Using a multi meter check for voltage at the gage terminals.            | 12 volts dc nominal. | Replace gage.        | Go to Step b. |         |
|      | 2    | b. Attach jumper across terminals of sending unit.                         | Gage operates.       | Replace sending unit | Go to Step c. |         |
|      |      | c. Troubleshoot wiring. Refer to wire diagram and schematic in Appendix D. |                      |                      |               |         |
|      | 2    | Check volts gage:                                                          |                      |                      |               |         |
|      |      | a. Using a multi meter check voltage at gage terminals.                    | 12 volts dc nominal. | Replace gage.        | Go to Step b. |         |
|      |      | b. Troubleshoot wiring. Refer to wire diagram and schematic in Appendix D. |                      |                      |               |         |

| MALF | STEP | INSTRUCTION                                                                         | INDICATION                                                               | YES                                 | NO            | REMARKS |
|------|------|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------|-------------------------------------|---------------|---------|
| 4    |      | TACHOGRAPH CLOCK IS INOPERATIVE.                                                    |                                                                          |                                     |               |         |
|      | 1    | Check circuit 59 using 12 volts dc nominal. a multi meter.                          |                                                                          | Replace tachograph para 5-66)       | Go to Step 2. |         |
|      | 2    | Check wiring. Refer to diagram and schematic in Appendix D.                         |                                                                          |                                     |               |         |
| 5    |      | INDICATOR/ILLUMINATION LAMP OUT.                                                    |                                                                          |                                     |               |         |
|      | 1    | Pull headlamp switch out.                                                           | All lamps come on with headlamp switch at full out or half way position. | Go to Step 4                        | Go to Step 2. |         |
|      | 2    | Check for voltage at the headlamp switch using a multimeter.                        | 12 volts dc nominal.                                                     | Replace headlamp switch para 5-62). | Go to Step 3. |         |
|      | 3    | Check wiring to headlamp switch. Refer to wire diagram and schematic in Appendix D. |                                                                          |                                     |               |         |
|      | 4    | For individual lamps that are out, replace bulb. Turn on headlamp switch.           | Lamp comes on.                                                           |                                     |               |         |
|      | 5    | Check wiring. Refer to wire diagram and schematic in Appendix D.                    |                                                                          |                                     |               |         |

**5-14. HEADLAMPS.**

a. *Description (fig. 5-31).* The headlamp system uses two sealed-beam lamps which provide separate and distinct high and low beams. A foot-operated dimmer switch controls the use of the high or low beam. The headlamp switch on the instrument panel turns the headlamps ON and OFF. A recycling type circuit breaker in the headlamp switch protects the circuit without a total loss of the headlamps in case of a short.

b. *Troubleshooting the Headlamp Circuit.* Perform the steps in table 5-8 to isolate faulty components of the headlamp circuit.

Figure 5-32. Dimmer Switch Checks

## 5-15. MARKER LAMPS.

a. *Description.* All vehicles in the series have five front marker lamps. The concrete mixer also has two intermediate side marker lamps. The dump, bituminous distributor, and the concrete mixer also have five rear marker lamps. Wiring to 24 V dc and 12 V dc trailer connectors is also provided. The lamps are turned on by the headlamp switch when the blackout switch is in the normal position. A momentary contact CLEARANCE LAMP switch allows the driver to flash the lamps.

*b. Troubleshooting.* The marker lamps circuit is straightforward and troubleshooting can, for the most part, be based on observation of the lamp(s) not working and reference to the circuit schematic, figure 5-33. The checks in table 5-9 can be used to isolate a problem.

---

**5-16. PARKING AND TAIL LAMPS.**

---

a. *Description.* The (front) parking and (rear) tail lamps are combination lamps which also provide stop and turn functions. The parking and tail lamp functions are actuated by the headlamp switch when it is pulled either halfway or all the way out (fig. 5-34).

b. *Troubleshooting.* Troubleshooting is indicated directly as the result of the observed malfunction as described in table 5-10.

**Figure 5-34. Parking and Tail Lamp Circuit**

**Table 5-10. Parking and Tail Lamps Circuit Troubleshooting.**

### 5-17. STOP AND TURN SIGNAL LAMPS.

a. *Description.* The turn signal and stop lamps (fig. 5-35) are combination lamps which also provide the parking and tail lamp functions. Referring to figure 5-35, you will see that circuits 35B and 36C provide the right turn directional flashing when the control handle is raised. Circuits 37 and 37F provide the left turn directional flashing when the control lever is lowered. The hazard lamps use those same circuits simultaneously to provide flashing of all four lamps. The stop lamp switch completes circuit 25 to actuate circuits 36C and 37F which provide the stop lamp function. The flashing functions override the stop and park functions. The flashing lamps on the control operate in conjunction with the flashing circuits (refer to table 5-11).

**5-18. BACKUP LAMPS.**

a. *Description (fig. 5-36).* When the ratio selector is placed in either reverse speed, the air-actuated backup switch (located on the transmission) will close and light up the backup lamps if the ENGINE RUN switch is turned on and the blackout switch is in the normal position. (Reference Table 5-12.)

**NOTE**

The compressed air system must be charged within the normal operating range in order to shift the transmission and actuate the backup switch.

|-------------|-------------|-------------------------------------------------------------|----------------------|-----------------------------------------|-----------------------------------------------|----------------|
| 1           |             | BACKUP LAMP(S) INOPERATIVE.                                 |                      |                                         |                                               |                |
|             | 1           | Check for voltage at inoperative lamp using multimeter.     | 12 volts dc nominal. | Check ground, replace bulb (para 5-46). | Go to Step 2.                                 |                |
|             | 2           | Check for voltage at circuit 38B terminal of backup switch. | 12 volts dc nominal. | Go to Step 3.                           | Check circuit 38B wiring.                     |                |
|             | 3           | Check for voltage at circuit 38A terminal of backup switch. | 12 volts dc nominal. | Replace switch (para 5-77).             | Check circuit 38A wiring and circuit breaker. |                |

### 5-19. BLACKOUT LIGHTING SYSTEM.

a. The blackout lighting system is shown and pictorially described in paragraphs 2-50 and 2-51. See illustration in paragraph 2-51 for location of the major components in this system.

b. To aid in troubleshooting, a schematic diagram (fig. 5-37) is provided below that isolates the blackout lighting system from the complete vehicle electrical system. You will find the vehicle electrical schematic diagram in Appendix D, along with the vehicle wiring harness drawings.

**5-20. MISCELLANEOUS ELECTRICAL.**

---

The items covered in this paragraph are:

- a.* Electric horn.
- b.* Heater fan.
- c.* Dome lamp in the cab.
- d.* Fixed work lamps (M916 and M920 only).
- e.* Portable work lamp receptacles.
- f.* Cigar lighter.
- g.* Winterization kit.

Table 5-14. Miscellaneous Electrical Circuit Troubleshooting.

## Section III MAINTENANCE PROCEDURES

---

---

### **5-21. INTRODUCTION.**

---

This section provides you with Organizational Level maintenance procedures for the electrical and instrumentation systems. To find a specific maintenance procedure, see one of the following task summaries.

- a.* Circuit Breakers and Wiring (para 5-22).
- b.* Starting and Starting Control (para 5-23).
- c.* Batteries and Alternator (para 5-24).
- d.* Exterior Lighting (para 5-25).
- e.* Cab Interior Lighting and Switches (para 5-26).
- f.* Panel-Mounted Instruments (para 5-27).
- g.* Electric Horn and Cab Heater Control (para 5-28).
- h.* Sending Units, Switching Devices and Winterization Kit (para 5-29).

**5-22. CIRCUIT BREAKERS AND WIRING MAINTENANCE TASK SUMMARY.****INITIAL SETUP****APPLICABLE CONFIGURATIONS**

All-Circuit Breakers.

**EQUIPMENT CONDITION  
PARAGRAPH**

5-37A.

**CONDITION DESCRIPTION**

Batteries Disconnected.

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

None.

**PERSONNEL REQUIRED**

One (MOS-63B20).

**REFERENCES (TM)**

TM 9-2320-273-10.

**REFERENCES (TROUBLESHOOTING)**

None.

**CIRCUIT BREAKERS AND WIRING.****5-30. CIRCUIT BREAKER MAINTENANCE. (M915, M916, and M920)****THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)**

- a. Removal. (4)
  - b. Installation. (4)
  - c. Operational Check. (2)
- 10 Minutes Total.

**INITIALSETUP****APPLICABLE CONFIGURATIONS**

M915, M916, and M920 – (9) Circuit Breakers

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

None.

**EQUIPMENT CONDITION  
PARAGRAPH**

5-37A.

**CONDITION DESCRIPTION**

Batteries Disconnected.

**PERSONNEL REQUIRED**

One (MOS-63B20).

**SPECIAL ENVIRONMENTAL CONDITIONS**

Vehicle Parked on Level Ground.

**REFERENCES (TM)**

TM 9-2320-273-10.

**GENERAL SAFETY INSTRUCTIONS**

Engine OFF.

Transmission on Neutral.

Park Brake Set.

Always disconnect batteries to prevent electrical shorts when working in the circuit breaker area. An electrical short or arc can cause damage to wiring and other electrical components.

**TROUBLESHOOTING REFERENCES**

None.

## CIRCUIT BREAKERS AND WIRING.

## 5-30. CIRCUIT BREAKER MAINTENANCE (M915, M916, and M920) (Continued).

| LOCATION/ITEM | ACTION | REMARKS |
|---------------|--------|---------|
|---------------|--------|---------|

## A. REMOVAL.

## CAUTION

To prevent electrical shorts and damage to wiring or other components, always: use one flat washer and two locknuts on the top row of terminal studs (copper), except no flat washer is used where a bus bar is present. Use one flat washer and one locknut on the bottom row of terminal studs (silver).

Connect wire terminals to the correct circuit breaker or diode and to the correct color terminal stud as illustrated.

## NOTE

Circled numbers in the illustration are wire numbers, while uncircled numbers are legend items.

Wire number 15D used on M916 and M920 only.

## LEGEND:

**CIRCUIT BREAKERS AND WIRING.****5-30.1 CIRCUIT BREAKER MAINTENANCE. (M917, M918, AND M919)****THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)**

- a. Removal. (4)  
 b. Installation. (4)  
 c. Operational Check. (2)
- 
- 10 Minutes Total.

**INITIAL SETUP****APPLICABLE CONFIGURATIONS**

M917, M918, M919 – (7) Circuit Breakers.

**EQUIPMENT CONDITION****PARAGRAPH**

5-37A .

**CONDITION DESCRIPTION**

Batteries Disconnected.

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

None

**PERSONNEL REQUIRED**

One (MOS-63B20).

**SPECIAL ENVIRONMENTAL CONDITIONS**

Vehicle Parked on Level Ground.

**REFERENCES (TM)**

TM 9-2320-273-10.

**GENERAL SAFETY INSTRUCTIONS**

Engine OFF.

Transmission on Neutral.

Park Brake Set.

Always disconnect batteries to prevent electrical shorts when working in the circuit breaker area. An electrical short or arc can cause damage to wiring and other electrical components.

**TROUBLESHOOTING REFERENCES**

None.

## CIRCUIT BREAKERS AND WIRING.

## 5-30.1 CIRCUIT BREAKER MAINTENANCE (M917, M918, AND M919) (Continued).

## LOCATION/ITEM

## ACTION

## REMARKS

A. REMOVAL.**CAUTION**

To prevent electrical shorts and damage to wiring or other components, always: use one flat washer and two locknuts on the top row of terminal studs (copper), except no flat washer is used where a bus bar is present. Use one flat washer and one locknut on the bottom row of terminal studs (silver).

Connect wire terminals to the correct circuit breaker or diode and to the correct color terminal stud as illustrated.

**NOTE**

Circled numbers in the illustration are wire numbers, while uncircled numbers are legend items.

| <b>A. REMOVAL.</b>                    |                     |         |
| 1. Four quarter turn screws (1).      | Loosen.             |         |
| 2. Hinged instrument panel (2).       | Lower hinged panel. |         |
| 3. Knurled nut (8).                   | Remove.             |         |
| 4. ETHER button (6).                  | Remove.             |         |
| 5. Hex nut (7).                       | Remove.             |         |
| 6. Two screws (3)<br>and washers (4). | Remove.             |         |
| 7. Two wires (5).                     | Remove.             |         |

Diagram illustrating the removal of the ETHER button. The top part shows a side view of the instrument panel with four quarter turn screws (1) being loosened. The middle part shows the hinged instrument panel (2) being lowered, revealing the ETHER button (6) and its associated wiring (51 and 51A). The bottom part shows the disassembly of the button assembly, including the hex nut (7) and knurled nut (8).

## BATTERIES AND ALTERNATOR.

## 5-38. BATTERY MAINTENANCE (Continued).

## LOCATION/ITEM

## ACTION

## REMARKS

## D. CHARGING (Continued).

**WARNING**

TO AVOID DAMAGE turn off charger  
and remove leads if:

- a. Battery case feels hot (125°F) (51.7°C).
- b. Violent gassing or spewing of electrolyte occurs.

12. Eight hex nuts (4).

Remove.

| <b>A. REMOVAL.</b>               |         |         |
| 1. Four quarter-turn screws (1). | Loosen. |         |
| 2. Hinged instrument panel (2).  | Lower.  |         |
| 3. Wire cap connector (6).       | Remove. |         |

The diagram illustrates the removal process in two parts. The top part shows a side view of an instrument panel with four quarter-turn screws (1) being loosened. The hinged instrument panel (2) is then lowered. The bottom part shows the disassembly of the cigar lighter unit, with the wire cap connector (6) being removed from the casing (5). The heating unit and button assembly (4) is also shown being removed from the casing (5).

| <p>The diagram illustrates the maintenance of electrical switches on the RH cluster. It features a central panel with various terminals and wires. Three detailed sub-diagrams are provided: 1. Knob and shaft assembly (1) with lamp switch (2) and release button (3). 2. Wire connections (17) for WIRE 25 D, L, 35 A, 35, 35 Z, 24 D, 26 A, 26, 30 R, 30, 23 Z, and 19. 3. Work lamps switch (12) and backup alarm switch (14) with their respective wire connections (15, 13, 11, 10, 8, 9, 22, 21, 20, 19, 18, 23, 24).</p>                                                                                                                                                                                                                                     |                         |                            |                            |             |               |                |               |             |                   |              |             |             |                       |             |                          |               |                            |                            |                         |                 |            |              |                     |                           |                      |             |

## PANEL MOUNTED INSTRUMENTS.

## 5-66. TACHOGRAPH MAINTENANCE (Continued).

## A. READING TACHOGRAPH DISK.

|          |                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TIME     | The outer ring of the disk has markings for 24 hours. Any events shown on the disk by markings happened at the time shown on the outer ring of the disk. Also, each time the tachograph is opened, a small tic mark is put onto the disk by each stylus. (There is a stylus for vehicle speed, engine speed, and distance).                                                                                  |
| SPEED    | Next to the outer marks for time there is a band about 3/4" wide. The stylus moving in this area records vehicle speed at any moment. You can see at a glance if an operator has been speeding.                                                                                                                                                                                                              |
| RPM      | After the speed band, there is a narrower band (about 1/2"). Another stylus moves in this area recording engine RPM. You can see if the engine has been overrevved. You can also determine whether the driver warmed up the engine before moving out. To see this, compare RPM reading with vehicle speed. The disk should record the RPM for the proper number of minutes before vehicle speed is recorded. |
| DISTANCE | A third stylus moves in the narrowest band, closest to the disk's center. This stylus moves away from the center for 5 miles and then toward the center for 5 miles.                                                                                                                                                                                                                                         |

In the disk shown, the vehicle did not move from midnight to about 5:37 AM. Then the engine was started, revved momentarily to about 1800 RPM, then idled at 600 RPM for six or seven minutes, revved to 2100 RPM momentarily, then shut down at about 5:46. At 7:10 AM the engine was started again, idled for 22 minutes. At 7:32 it moved out, attaining a speed of about 28 mph, then stopped and idled for eight minutes. Then it moved out, accelerated to about 45 mph and did stop-and-go driving for about 32 minutes, accelerating from 0 to about 45 mph three times and traveling about 15 miles. At 8:11 it stopped, having traveled about 15 miles, it idled for about 48 minutes and then was shut down at about 9 AM.

## ELECTRIC HORN AND CAB HEATER CONTROL.

### 5-69. HEATER FAN SWITCH MAINTENANCE (Continued).

| LOCATION/ITEM             | ACTION                           | REMARKS                  |
|---------------------------|----------------------------------|--------------------------|
| <b>A. REMOVAL.</b>        |                                  |                          |
| 1. Two screws (2).        | Remove.                          |                          |
| 2. Back panel cover (7).  | Slide back over cables.          |                          |
| 3. Heater knob (6).       | Pull off.                        |                          |
| 4. Hex nut (5).           | Remove.                          |                          |
| 5. Heater fan switch (4). | Remove from lower control panel. |                          |
| 6. Four wires (3).        | Remove.                          | Tag for proper location. |

The diagram shows a side view of the lower control panel. A large arrow points downwards from the panel, indicating its removal. Two screws (2) are shown being removed from the back panel cover (7). The back panel cover is shown sliding back over the cables. The heater knob (6) is shown being pulled off the heater fan switch (4). The hex nut (5) is shown being removed from the heater fan switch. The four wires (3) are shown being removed from the heater fan switch.

5-72. WATER TEMPERATURE SENDING UNIT MAINTENANCE.

THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)

- a. Removal. ( 5)
  - b. Installation. ( 5)
  - c. Operational Check. (10)
- 20 Minutes Total.

INITIAL SETUP

APPLICABLE CONFIGURATIONS

All.

TEST EQUIPMENT

None.

SPECIAL TOOLS

None.

MATERIALS/PARTS (P/N)

Liquid Teflon (Refer to Appendix C).

EQUIPMENT CONDITION

PARAGRAPH

4-42A.

CONDITION DESCRIPTION

Radiator Drained Below  
Sending Unit Level.

PERSONNEL REQUIRED

One (MOS-63B20).

SPECIAL ENVIRONMENTAL CONDITIONS

Vehicle Parked on Level Ground.

REFERENCES (TM)

| LOCATION/ITEM | ACTION | REMARKS |
|---------------|--------|---------|
|---------------|--------|---------|

A. REMOVAL.

1. Three quarter-turn screws (1). Loosen.
2. Circuit panel cover (2). Lower.

The diagram illustrates the removal of the park brake switch. The top portion shows a circuit panel with a cover (2) being lowered. A screw (1) is being loosened. The bottom portion shows the park brake switch (4) being removed from the panel. Wires 44F, 44G, and 53D are shown connected to the switch. An adapter (5) and washer (6) are also shown.

## SENDING UNITS, SWITCHING DEVICES, AND WINTERIZATION KIT.

**5-87. WINTERIZATION KIT CIRCUIT BREAKERS, BOX, AND RECEPTACLE MAINTENANCE (Continued).**

| LOCATION/ITEM                                                 | ACTION                                                                                                                    | REMARKS                                                                                      |
|---------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| <b>C. OPERATIONAL CHECK.</b>                                  |                                                                                                                           |                                                                                              |
| 7. Receptacle (18).                                           | Plug in 110 VAC power cord,                                                                                               |                                                                                              |
| 8. Circuit breaker (2) or (3).                                | Flip replaced breaker to ON and verify that appropriate heater is functional.                                             | After verifying proper heater functions, flip all breakers to OFF and disconnect power cord. |
| <b>D. REMOVAL OF CIRCUIT BREAKER BOX AND RECEPTACLE.</b>      |                                                                                                                           |                                                                                              |
| 9. Breaker box (5).                                           | Open outer cover, remove four washers (8) and screws (7) and inner panel (6) to gain access to box attaching hardware.    |                                                                                              |
| 10. Four cable to receptacle box connectors (15).             | Unscrew.                                                                                                                  |                                                                                              |
| 11. Six screws (1) and two screws (4).                        | Unscrew and remove eight wires (17).                                                                                      | Mark each wire and pull wire out of receptacle box.                                          |
| 12. Three bolts (9) with washers (10) and nuts (11).          | Unscrew and remove circuit breaker box (5) with receptacle box (16) attached.                                             |                                                                                              |
| 13. Receptacle (18).                                          | Remove retaining screws.                                                                                                  |                                                                                              |
| 14. Three wires (19).                                         | Disconnect from receptacle (18) and remove receptacle.                                                                    | Mark position before disconnecting.                                                          |
| 15. Four bolts (14), washers (13) and nuts (12).              | Unscrew and remove receptacle box (16) from circuit breaker box (5).                                                      |                                                                                              |
| <b>E. INSTALLATION OF CIRCUIT BREAKER BOX AND RECEPTACLE.</b> |                                                                                                                           |                                                                                              |
| 16. Receptacle box (16).                                      | Attach to circuit box (5) with four bolts (14), washers (13) and nuts (12).                                               |                                                                                              |
| 17. Three wires..                                             | Connect to receptacle (18) and install receptacle to box (16).                                                            |                                                                                              |
| 18. Circuit breaker box (5).                                  | Mount to vehicle with three bolts (9), washers (10) and nuts (11).                                                        |                                                                                              |
| 19. Eight wires (17).                                         | Push thru either side of receptacle box and fasten to circuit breakers as marked, with six screws (1) and two screws (4). |                                                                                              |

## SENDING UNITS, SWITCHING DEVICES, AND WINTERIZATION KIT.

**5-88. WINTERIZATION KIT TRANSMISSION OIL HEATER MAINTENANCE.****THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)**

- a. Removal of Transmission Oil Heater, (30)
  - b. Installation of Transmission Oil Heater. (30)
  - c. Operational Check. (15)
- 75 Minutes Total.

**INITIAL SETUP****APPLICABLE CONFIGURATIONS**

All.

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

None.

**EQUIPMENT CONDITION****PARAGRAPH**

6-9A.

5-37A.

**CONDITION DESCRIPTION**

Transmission Oil Drained.

Batteries Disconnected.

**PERSONNEL REQUIRED**

One (MOS-63B20).

**SPECIAL ENVIRONMENTAL CONDITIONS**

Vehicle Parked on Level Ground.

**REFERENCES (TM)**

TM 9-2320-273-10.

TM 9-2320-273-20P.

**GENERAL SAFETY INSTRUCTIONS**

Engine OFF.

Transmission in Neutral.

Park Brake Set.

110 VAC Cable Disconnected From Power Source  
and Receptacle.

All Breakers Set to OFF.

**TROUBLESHOOTING REFERENCES**

Table 5-14.

## SENDING UNITS, SWITCHING DEVICES AND WINTERIZATION KIT.

## 5-89. WINTERIZATION KIT ENGINE OIL HEATER THERMOSTAT MAINTENANCE (Continued)

LOCATION/ITEM

ACTION

REMARKS

## C. OPERATIONAL CHECK (continued).

## NOTE

If after thermostat maintenance the heater does not function properly, refer to DS/GS as the oil pan will have to be removed for service of the heater,

Follow-on maintenance required:

Reconnect vehicle batteries per para 5-37B.

## SENDING UNITS, SWITCHING DEVICES, AND WINTERIZATION KIT.

**5-90. WINTERIZATION KIT ENGINE COOLANT HEATER MAINTENANCE.****THIS TASK COVERS: (APPROXIMATE TIME REQUIRED FOLLOWS TASK DESCRIPTION.)**

- |                            |             |
|----------------------------|-------------|
| a. Removal of Heater       | (60)        |
| b. Installation of Heater. | (60)        |
| c. Operational Check .     | <u>(15)</u> |
| 135 Minutes Total          |             |

**INITIAL SETUP****APPLICABLE CONFIGURATIONS**

All.

**TEST EQUIPMENT**

None.

**SPECIAL TOOLS**

None.

**MATERIALS/PARTS (P/N)**

Liquid Teflon (See App C) .

**EQUIPMENT CONDITION****PARAGRAPH**

4-42A.

4-25A/4-27A.

4-37A.

**CONDITION DESCRIPTION**

Engine Cooling System Drained.

Engine Air Filter and  
Ducts Removed.

Batteries Disconnected.

**PERSONNEL REQUIRED**

One (MOS-63B20).

**SPECIAL ENVIRONMENTAL CONDITIONS**

Vehicle Parked on Level Ground.

**REFERENCES (TM)**

TM 9-2320-273-10.

TM 9-2320-273-20P.

**GENERAL SAFETY INSTRUCTIONS**

Engine OFF.

Transmission in Neutral.

Park Brake Set.

110 VAC Cable Disconnected

From Power Source and Receptacle.

All Breakers Set to OFF.

**TROUBLESHOOTING REFERENCES**

Table 5-14.
